30 meters, in the entry level license.

You may not think that the Tech written is very difficult, but the BoD thinks
differently. And if someone wants significant HF privileges, they have to get
at least a General.

I can't see what all the fuss is about keeping the 5 wpm code test. Is it
really that difficult?

The problem with your proposals, Jason, is that they don't do very much.

It's always been in danger. Other services have always looked at our allocations and asked why they couldn't have some.

> We need more
>occupants to help occupy it... and HF voice
>priviliges are the only carrot left to put on the stick.

We have 683,000 US hams today. That's about 2-1/2 times what there were back when I got started in 1967. If the bands aren't crowded, it's because existing hams aren't on the air, not because there aren't enough hams.

>This is a graying hobby.

Think about why.

I'm not sure what you mean, Steve.

The ARRL proposal focuses mostly on the entry-level license and the license
classes closed off to new issues. There's not a lot of bandplanning in it.
>
>> > While not as verbose about it, I agree that this "proposal" was

And that's not going to change. Been that way for 20 years, and FCC isn't
going to take back the work that it now gets done for free by unpaid
volunteers.

So the *only* answer is to make the test pools so big that it's easier for 99% of new hams to just learn the material than to word-associate and rote-memorize their way to a passing grade. And, in my experience, most newcomers really want to learn the material. YMMV.

> Yes, some "learning" will occur just from reading the question
>over and over, but to what legitimate application can THAT kind of

"Lopressor is a beta blocker administered SIVP for the control of hypertension and AFIB with IVR."

Got it - sort of.

> Got that? Now, WHAT is a beta blocker?

Some kind of drug. Has to do with the mechanisms that cause high blood pressure and /or hear attacks. Administered intravenously.

>What was the underlying
>etiology of the hypertension or the atrial fibrillation that produced
>the irregular ventricular response?

Something to do with too much beta. Whatever beta is in this context.

I figured out all that from context and a hazy layman's exposure to cardiac medicine. Do I really understand it? Of course not!

I don't see that. What I do see is the FCC taking its time and letting everyone propose all sorts of stuff, and comment on same. NPRM? Maybe some months down the road. Actual rules changes? Don't hold your breath or you'll need more than beta blockers ;-)
>
> Each has produced a momentary road bump followed by a rapid

Code? Schmode! (what a load?)

You "hams" want to keep the pride and technical prowess
within Amateur Radio into the new Century? Then do this:

1) Eliminate ALL code testing for ALL License classes.

2) Enact a complete re-vamping of the pool of the written
exam questions.

(and now for the rub)

3) DO NOT PUBLISH the question pools - PERIOD !

If someone wants an Amateur License, then they should have a
working technical and theoretical knowledge of RF Theorems and
all related aspects of electrical and electronic practice.

It used to be that if you were an Amateur Operator you had to demonstrate
a degree of professionality and knowledge

Having an Extra Class licence should be *almost equal* to someone
who has a BSEE. Both should be able to answer questions on varied
topics of Electrical Engineering with a reasonable degree of competence.

Until something along these lines is attempted, Amateur Radio will
be nothing more than glorified CB radio. I've been to enough club
meetings and hamfests where I've seen holders of Extra Class tickets
who couldn't comprehend even the most basic of electronics theory.
It didn't used to be this way!

It used to be that way. Remember the "Dick Bash" books. These came out when the FCC was still administering Amateur tests. The FCC didn't release the question pool or the answers. Ham applicants would send the questions in the remembered from the tests and Bash would publish them.

No, you had to display a basic understanding of practical radio as it applies
to
what amateurs do on the amateur bands.

>Having an Extra Class licence should be *almost equal* to someone
>who has a BSEE.

Why?

I've got BSEE and MSEE, and lemme tellya, if the requirements for a ham
ticket get anywhere near those levels, it won't be pretty.

>Both should be able to answer questions on varied
>topics of Electrical Engineering with a reasonable degree of competence.

Why?

Radio - all of radio - is but a small part of electrical engineering. There's
no
reason to require such broad knowledge for an amateur radio license.

>Until something along these lines is attempted, Amateur Radio will
>be nothing more than glorified CB radio. I've been to enough club

Here's a clue: The folks you see at hamfests and club meetings aren't
all there is to amateur radio.

>It didn't used to be this way!

How do you know?

Agree here also.

> 3. Keep the current phone bands in place as an incentive to use and
> develop narrowband modes like CW, PSK-31, etc.

Interesting, but I would prefer to split up the bandplans based on actual
bandwidth of the mode in question.

> 4. If keeping Advanced licenses in the database is too much work,
> then give Advanced licensees a free upgrade to Amateur Extra.

Should not be a real problem to keep Advanced holders in the database.
It would probably be more difficult to upgrade them to Extra. The easiest
thing to do would be to make the Advanced and Extra priveleges the same --
no database changes that way, only paperwork changes.

> 5. Do NOT reduce Novice privileges. (The ARRL proposal reduces their
> allowed power output and eliminates their 23 cm privileges.) If
> keeping Novice licenses in the database is too much work for the FCC,

See above, probably easier to equate Novice, Technician and Tech-Plus
priveleges.

> 6. If the entry-level license has too few HF privileges, then expand
> HF privileges for the new Technician class rather than give all
> Technicians a free upgrade to General.

Agreed, there should be no automatic upgrades, expansion of priveleges would be my prefered method.

And I say: "So what? The question is whether there is any good reason to
give almost 60% of existing hams a free upgrade to the next license class,
even though the upgrade to that class requires only a written test from a
published pool.

>Were you also opposed to giving pre-1917 hams a waiver for the 20 WPM
>code test?

No such waiver ever existed. What *was* waived were the 20 wpm receiving and sending code tests, plus the Extra written test. The person who got the waiver had to hold at least a General license, too.

That was long before my time, too. And it affected maybe 2% of the licensed hams at the time.

I disagree. What's wrong with simply allowing Techs, Tech Pluses and Advanceds to upgrade in their own time?

What is the sudden need to eliminate those license classes? The Novice and Advanced have been closed off to new issues for almost 4 years, and their numbers have declined. And from 1953 to 1967, no new Advanceds were issued. Did any of that cause problems?

What's the rush?

Are the written tests too hard?

>Decades in the future, or never?

I don't see any reason to "refarm" them at all. Not at this time, anyway.

Note that in 4 years, the number of Advanceds has dropped by only about 16%.
Seems to be a pretty popular license even today.

It sounds to me like you want all Advanceds to become Extras so that the
Advanced subbands can become General bandspace. That's not part of the ARRL
proposal, though.

>>>Also avoids having to accommodate a license class (Tech Plus) that isn't
>>>even carried in the FCC database anymore, which is a records/
>>>enforcement problem for the FCC, and requires the licensee to keep
>>>documentation forever.

>If by saying, "If the current rules are left alone..." you really meant
>leaving alone everything *except* the 5 WPM Morse code requirement
>(which would be eliminated for these General and below under the ARRL
>proposal), then, and only then, Technician-class hams will assume the
>HF privileges of Technician-Plus.

Whatever. I don't see why the 5 wpm code test is such a big deal as a
requirement.

>That's still a long time in FCC
>enforcement (and VEC administration) years.

Why? It's been almost 4 years since the last restructuring took effect. Look at
the enforcement letters - Techs without code masquerading as Tech Pluses isn't
a
big problem, from what I see.

>Even if you argue that FCC
>action on further restructuring will take most of that six years anyway,
>there are still all those Novice and Advanced class licenses that will
>likely exist in the database for decades to come.

It makes sense to grandfather existing Novices to the "NewNovice" (or whatever
it is called). There are only about 32,000 Novices left now, down from just
under 50,000 after restructuring.

What *is* the problem with Advanceds just staying as they are? Have you not
read from the Advanceds who say they *don't want* to become Extras?
>
>>Why not just give all the existing Techs, Tech Pluses and Novices the
>>"NewNovice" privs, in addition to their existing privileges? The database
>>doesn't need to change at all.
>

>Did you notice that Novices actually lose privileges? See the FAQ
>document above for more details. In particular, power limits are
>lowered from 200 Watts PEP to 100 Watts PEP on HF bands except for 10

>separate power limits for Novice and Technician on HF? This is starting
>to get more complicated than before.

Not at all! Where an existing ham has greater privs, those privs would be
retained. This has been done with Tech Pluses for almost 4 years now. FCC
proposed it and enacted it, btw. Why can't it be done for existing Novices and
Techs?

The 1998 proposal from ARRL Hq was for Tech Pluses and Novices to get a freebie
to General - and FCC said no. What has changed that suddenly makes free
upgrades a good idea?

>>>>>Rather, it is just one of

>ones didn't? And, of those that didn't get enacted, which ones you
>think have already been given a final "no" answer?

All right.

Fact is, almost nothing proposed by ARRL Hq in 1998 got enacted. 5 wpm for
General, that's about it. On everything else, FCC either:

- said no: free upgrades, better written tests, Techs on HF CW without a formal
test

- went far beyond what was requested: 5 wpm Extra, Advanced closed off, written
testing reduced dramatically

>>>They can turn to the reformers and say, "See, we're giving you
>>>a both a Novice and General HF-class license that doesn't require Morse
>>>Code." To the old-school (and long-time, dues-paying) members they can
>>>at least imply, "We recognize that the Morse Code tests you took in the
>>>past are valuable, so we are going to reward you with a higher class of
>>>license. Then you will always know that you are better than anyone who
>>>gets a General or Extra class license under the reduced standards in the
>>>future."
>
>>Avoids the subject of why free upgrades are needed.
>
>But does address the subject of why they may be politically desirable,
>not only by leading to simplified FCC regulations, but also resulting
>in a more harmonious and productive amateur radio in the future by
>addressing most of the concerns of most factions.

I don't see that at all. Are the written tests so difficult, and the VE test
process so onerous, that free upgrades are the only answer?
>
>>I say they're not.
>
>So you've said. I'm sure that you will also say this to your

>the subject.

Already have. In detail. More to come, too.

>I will, too. For the record, I'm not in complete
>agreement with the ARRL proposal, either. I don't see the regulatory
>justification for the retention of 5 WPM Morse code for Extra,

I do. Morse code is a big part of amateur radio, and having no code test at all simply denies the reality of that.

>and I
>remain skeptical that a Novice license (even a restructured one) is
>viable today.

What we have now is a system that tends to funnel newcomers into VHF/UHF amateur radio, and manufactured equipment. And away from HF and homebrewing. A restructured Novice could change that.

>viola! A plan that not only P****s off those who came before, but also
>those who will come afterward.

Perhaps. Weigh that against the fact that if BPL is ever deployed at
anything like a large scale, license tests for HF won't matter because
HF will be pretty much unusable for ham communications of the type
we're used to.

> It will also make an incredibly good case for - dare I say it?
>indisputable running numbing dumbing down of the ARS.
>
(devil's advocate mode = ON)

Back in the 1960s, we got something called "incentive licensing", which
was the result of concern that US hams weren't keeping up with techo-
change and were turning into "appliance operators", etc., etc.

Did any of those trends really change because of IL?

Were they complaining that it was needed or were they against it?
This isn't a trivial question. Some folks claim the majority were for it,
while others claim the majority were against it. Some say it was a good
idea, some say it trashed amateur radio.

What say you?

>When they came out with the No code tech license
>there was a vocal minority complaining.

Which way?

The FCC tried to get a nocodetest license as early as 1975, and again in 1983,
but clear majorities of hams were against it. They funally pushed it through in
1990. Some folks claim the majority were for it, while others claim the
majority were against it. Some say it was a good idea, some say it trashed
amateur radio.

What say you?

>Now they are doing away with
>most of the CW requirement and there is a vocal minority complaining.

Which way? And how do you know they're a minority?

Survey after survey shows that there is still majority support for at least
some code testing. Indeed, the comments to FCC back in 1999 show that not only
was there majority support for code testing, but a majority of commenters
wanted at least two code test speeds. The folks wanting only 5 wpm or no code
test were the minority. But that minority got its way.

>WAyyyy back there used to be the class separation and then they did
>away with it to the point where the General class had full privileges.

Late 1952. Went into effect Feb, 1953.

>Each change has brought out the "gloom and doom" element proclaiming
>this will be the straw that broke the camel's back and the end of
>Amateur Radio.

That's one way to look at it. Here's another: Some look at the trend since about 1975 and see a gradual reduction in the qualifications for a license, and a gradual reduction in the "quality" of the ARS. YMMV. No one event or change sticks out - just a slow, gradual change that is barely noticeable unless you step back and compare over a long period of time.

Even if the data rate is slowed down?

If there's anything that deserves spectrum space for experimentation,
it's digital modes, not analog voice modes.

>nothing away from anyone

Hold on a sec.

Right now there are about 105,000 Extras. And we have a few slices of
choice kHz on 4 HF bands. In my experience, QRM in these subbands is usually
less than elsewhere in the same band because relatively few US hams have access
to them.

If all 83,000 Advanceds get a free upgrade to Extra, they'll have access to
those choice slices and they'll probably increase the QRM level. So giving them
a free upgrade *does* take something away from existing Extras.

Same situation for Generals.
elsewhere in the same band

>and immediately gets everyone into the
>new 3 license system,

But nobody says why that is such a big priority, when it wasn't 4 years ago.

>or
>
>2. Go to the new system but "grandfather" those on current but no
>longer to be issued license classes which takes nothing from anyone but

>as new ended up SK or otherwise dropped from our ranks

or upgraded! Have you forgotten that any of the closed off classes can
upgrade with the required tests? The fact that so few Advanceds have
upgraded in almost 4 years is quite interesting, don't you think? Number
of Advanceds is down by only about 16%, and that includes both upgrades
and expirations.

Where, Hans?

[expletive deleted]

> it Jim, that is patently false and you know that
>it is, yet you keep dragging it out as a fact.

What is false?

Here's the quote:

"Allowing a free upgrade is proof that the material in the test which
is not taken is not necessary for the privileges."

How is that patently false?

Perhaps it would be clearler stated thusly:

"If a free upgrade is allowed, some will say that
such an upgrade is proof that the material in the test which
is not taken is not necessary for the privileges."

>Allowing a free upgrade
>isn't "proof" of anything except that a free-pass was given, sort of
>like a day of amnesty when all overdue library books can be returned
>without fees.

Not the same thing at all! Fee-amnesty is a forgiveness of a violation.
Free upgrade isn't.

Consider this scenario:

FCC says new rules will go into effect on R-day (R for Restructuring)

Our Hero gets Tech on R-day minus 1

Our Hero gets free upgrade to General on R-day.

General written test not needed by Our Hero.

QED

>Yes, it's a really bad idea, but it doesn't disprove the
>need for proper qualification examinations.

IF the free upgrades are actually done, don't you think some
will say there's no reason for the General test?

It's called logic, Hans. Try it sometime.

>Go join Carl Stevenson and
>Ed Hare in the NTI sign-up queue. (I'd mention them by call sign, but I
>wouldn't want to risk compromising your "standards".)

You mean WK3C and W1RFI?

Why are you so afraid of dissenting opinions, Hans?
What are you so afraid of?

Water over the dam or under the bridge.

Fact is, there has NOT been any
credible survey done of late which would take into account
the realities of change going on and the change that has gone on.
Additionally, for the umpteenth time, the rules and
regulations of amateur radio are NOT the sole province of
already licensed amateurs. The mere fact that a majority of amateurs
does or doesn't want code testing is NOT sufficient cause for
the FCC to make the rules according to only those already
licensed.

Cheers,
Bill K2UNK

Fact is that a General in 1957 had all privileges and the test was
probably easier then than now..other than the code test.

> >Maybe in addition to the technology and procedure testing we should

> I do.

20wpm? Yet neither you nor anyone else was able to
convince the FCC that even 13wpm was justifiable
for any license class. And that was 5 years ago.

> >It really doesn't matter how we test, there is always going to be a

> So it makes sense to please the majority, doesn;t it?

Read my lips...this isn't a vote as to what is best!
In the end it is the FCC that decides based on individual and
group input from ALL that wish to do so....amateurs and non-amateurs
alike. There is NO decision based on a majority of anything.

> >The move proposed by the League is consistent with international
> >treaty and world policy.

> Some of it does.

What part of it doesn't?

> But do you support free upgrades of all Techs and Tech Pluses to General,
and
> all Advanceds to Extra?

It doesn't bother me at all.

Cheers,
Bill K2UNK

Passing the General written in 1958 was not difficult
at all for anyone with a memory and who spent limited time studying
the AMECO study guide or ARRL study guide which only had
some 5/6 pages of study material for General.

> Yes, some "learning" will occur just from reading the question
> over and over, but to what legitimate application can THAT kind of
> learning be applied?

The Q&As aren't going away. Better to focus effort on expanding the
Q&A pool for things like formiula calculations such that memorizing

the formula...not the answer is the better way to learn.

> > > My "answer" is a letter to the ARRL suggesting that this was NOT

I don't think the FCC cares if there is or isn't a floodgate of
new hams. The FCC wants stability over the next decade or
longer. The ARRL proposal would do exactly that...once and for a
long time forward.

> Each has produced a momentary road bump followed by a rapid

DId you read the review in QST about the digital box you attach to your HF rig?

It sounded like a pretty good thing, until they pointed out it's fatal deficiency near the end. I shouldn't b that harsh - if it is a fixed frequency application, then it won't be too bad.

You just have to be listening at the right frequency at the beginning of a transmission, or it's no hearee! My guess is that anything that will allow you to pick up a transmission in the middle of a transmission will boost the bandwidth requirements up quite a bit.

> a free upgrade *does* take something away from existing Extras.

Like all those Advanced are on the air now. Give me a break.
83,000 advanced today who are either SK, inactive or just
don't see the need to upgrade and you expect even a measurable
increase in QRM because some of them may suddenly start

operating in the Extra only segments.

> Same situation for Generals.
> elsewhere in the same band
>
> >and immediately gets everyone into the
> >new 3 license system,
>
> But nobody says why that is such a big priority, when it wasn't 4 years
ago.

I suspect the FCC four years ago (5 years ago now) expected change
over time. You are free to voice your own thoughts on need or not.

> >or
> >
> >2. Go to the new system but "grandfather" those on current but no

>
> 4. Do something else.

I identified the ONLY three options on a general basis. You propose
something else but do not specify what that is. Either there is
nothing else as an option and you know it or, there is another
option but you don't wish for anyone to know what it is.
The ball is in your court. Only three options exist unless you can provide
a real 4th option.

I don't care. In the end the FCC will decide. There's no need for me
to explain or even understand why the FCC might allow it.

Which requires enforcement authorities to keep tabs on 6
different sets of spectrum authority. You can disagree that it isn't
significant, but I'd bet it IS an issue in the FCC and other
government mindsets. YMMV.

Cheers,
Bill K2UNK

Jim, it is the truth as plain as can be.

"Wanna be a general class ham?"

"Sure."

"You have three choices:"

"1. Study and become a General class ham now

2. Study to become a Technician now, and wait a few months, then you'll be a General.

3. Wait until after those few months, and take a General test and then be a General class Ham."

"Is the technician class test more difficult than the General?

"Nope, it's easier."

"Wait a second! Is the Technician a higher class than the General?"

"Nope, General is one grade higher than Technician."

"So by taking an easier test now, I can get more privileges, and all I have to do is wait a few months?"

"Yup!"

"But if I wait, I'll have to take a harder test for the same thing?"

"Yup."

"Hold on a second! If I can take an easier test now, and get the same privileges as a harder test later, WHY should the later test be harder? Why should those who come later have to take a more difficult test when the test I take now is sufficient? Isn't the Technician test we take now qualification enough?

"I don't really know!"

If they are done this way, those who want lesser testing will have a
powerful tool. "Look at all the people who are now Generals and only
took a Technician test. Give logical and compelling reasons that this
should not be a permanent thing."

How on earth are we going to argue against THAT?

Yes, there has.

Simply look at the comments to the various petitions to the FCC re:
restructuring.

>Additionally, for the umpteenth time, the rules and
>regulations of amateur radio are NOT the sole province of
>already licensed amateurs. The mere fact that a majority of amateurs
>does or doesn't want code testing is NOT sufficient cause for

>licensed.

That's why the comments to the FCC are so revealing. Anyone can comment,
licensed or not. So all it takes is a simple review of the comments to get an
indication of what the amateur community, licensed or not, thinks.

And since FCC requires commenters to give their real identity, "box-stuffing"
and such is avoided, and if one person writes a dozen comments, they still only
count as one person's opinion.

NCI did a count of the comments to 98-143, and the majority wanted at least two
code test speeds. FCC said no. That's their right, but it's important to note
what the majority of commenters wanted.

Would you say that if you had a clear and obvious majority?

Suppose comments to the 98-143 had been 70% "dump the code test" - we'd never
hear the end of it.

>In the end it is the FCC that decides based on individual and
>group input from ALL that wish to do so....amateurs and non-amateurs
>alike. There is NO decision based on a majority of anything.

The claim was made in this thread that "a vocal minority complained". Majority
and minority opinion *do* have an effect - just ask John Kerry.

> restructuring.

Two points:

1. That was 5 years ago and
2. That was NO survey and you know it. Yes, one can
derive statistics of those that DID comment, but the
stats are in no way automatically revealing of what the amateur
community as a whole may think. Anyone that ever
took a statistics class can tell you that.

WRONG for the same reasons I just stated above.

> And since FCC requires commenters to give their real identity,
"box-stuffing"
> and such is avoided, and if one person writes a dozen comments, they still
only

least two
> code test speeds. FCC said no. That's their right, but it's important to
note
> what the majority of commenters wanted.

NOTE SPECIFICALLY: NCI never stated anything other than
the results of those that commented. Anything beyond that
would be speculation only.

Majority
> and minority opinion *do* have an effect - just ask John Kerry.

In the end it will come down to the FCC only...regardless
of any vocal minority or majority.

> >> >The move proposed by the League is consistent with international
> >> >treaty and world policy.

Free upgrades do NOT specifically go against anything in
the treaty or otherwise in the more broad based "world policy" .
If you think otherwise, please point out the conflicting
treaty text.

> >> But do you support free upgrades of all Techs and Tech Pluses to
General,
> >> and all Advanceds to Extra?
> >

I don't see where the FCC would have to "take back work". They'd
just have to say "The test pools are closed, adn publishing the
verbatim responses is illegal as it compromises the validity of the
test."

Any "work" would be that of the VE's to not allow the tests to be
compromised.

My point exactly.

> > Got that? Now, WHAT is a beta blocker?
>
> Some kind of drug. Has to do with the mechanisms that cause high blood pressure
> and /or hear attacks. Administered intravenously.

MAY be administered intraveneously. Also available in PO (oral)
form, occassionally administered sublingually.

> >What was the underlying
> >etiology of the hypertension or the atrial fibrillation that produced
> >the irregular ventricular response?
>
> Something to do with too much beta. Whatever beta is in this context.

Nope. You did pretty good to here. THAT question was what OTHER
problems CAUSED the A-fib. The Lopressor will correct (temporarily)
the A-fib...

> I figured out all that from context and a hazy layman's exposure to cardiac
> medicine. Do I really understand it? Of course not!

Again, my point exactly. Now, change that to any one of the
dozens of test questions for the Amateur exams and we have the same
thing...

> >
> That's because none of them address, or can address, the underlying problems
> that limit growth in amateur radio.

I only see ONE underlying problem, Jim, and it's hardly a
"problem"...It's just human nature...Amateur Radio is a technical
hobby. Even in Amateur Radio's "Golden Ages" there were only certain
folks who got interested in it, and an even smaller number that got
interested and stayed!

It's no different than stamp collecting, hang gliding, or
motorcycle racing. Some people will be attracted to it, a great many
others won't. It's no big deal that we don't have ten million
licensees!

Last I checked, Your Sliminess, this was USENET, not Amateur
Radio...It may be a forum ABOUT Amateur Radio, but Part 97 does not
apply here.

And even if it did, nothing in it says "Bend over and let
spineless geeks slap you around".

Back under your rock, Putzy One.

I can't figure out why the ARRL didn't just go for 1 class and give them all of the bands. Throw out the rule book. Tell the FCC to look the other way. Then everyone will be happy. No rules, no problem. That is what the US amateurs want give it to them. No more skill than a 4 year old sitting on the pot picking his nose. To the ARRl it's still about money. Less skill involved means more hams means more membership means more money. Next they will want PHD's for anyone passing basic algebra and 1st year gym.

Ham radio------a thing of the past!

"My Coat of Many Colors" goes to the deeper truth of family and love regardless of one's religious preferences. We relate to the love of a parent doing their best in tough times for their children. I think it is a great piece myself.

> should not be a permanent thing."
>
> How on earth are we going to argue against THAT?

Simple: We're not! We can say all we want that it was a one-time
thing,
that it was needed in order to close the books on licenses no longer
issued, that time-in-grade is worth something, yada yada yada. But in
the end, they'll be able to pick out a few dozen/hundred/thousand who
got their licenses X days before the freebie, and say, "why can't I
get the same deal?"

This sort of thing is probably why FCC didn't just grandfather all
existing Generals and above to Extra in 1968. And it also explains the
Great Giveaway of December 1952.

The newbies would have a legitimate-sounding gripe.

Maybe. Or maybe, like some other rrap denizens, he resorts to anger
when lacking a logical counterargument.

wait till the RM comments....

Which brings up an interesting point....

Back in the ancient time, FCC essentially said they weren't going to
do
anything until the amateur community came to a consensus on changes.
That
all changed with the NPRM for 98-143.

It appears that folks in the ARRL BoD and Hq, as well as a few others,
knew that something was brewing at FCC, and put out proposals just
before
the NPRM hit the streets. But most of us did not know what was brewing
until proposals and the NPRM started to fly.

Then came all the comments, etc, and finally the Report and Order in
December
1999.

This time, it's quite a bit different. S25.5 is essentially gone, and
FCC does...nothing. 14 petitions from various groups, some of them
almost exactly identical (NCI and NCVEC), hit FCC, and they assign RM
numbers in batches of 7, and take comments.

Now comes the ARRL proposal. And maybe more, like Hans. Been over six
months since folks came home from Geneva and.....no rules changes.

See the difference?

The first ARRL website/QST story said the process would take 2 years.
I scoffed - now I'm wondering if they might be right!

Wanna do a proposal, Mike? Everybody else is!

I think most of us agree that it would be best if FCC took back the testing process and no longer made the Q&A pool public information. But it's clear that's not going to happen in any foreseeable future, for a long list of reasons. (Most of which come down to "money", as in "FCC isn't going to spend it on tests for hams").

There's also the issue that after 20 years of VECs, FCC would have to be convinced that the system is failing, *and* that the only way to fix it was to give the process back to FCC. Ain't gonna happen.

And there's nothing to stop Son Of Bash from doing what the original did 30 years ago.

On top of all this, suppose that by some miracle FCC *did* take back testing and test generation. Or maybe farm it out to a commercial testing firm. What do you think a test would cost? I recall that back in the '60s, when FCC imposed test fees on hams, the fee was $9. Which doesn't sound like much until you adjust for inflation. So it would probably be in the $50-100 range (or more) today. Not the kind of thing to help our growth - particularly among young people!

Yet no matter how often these facts are brought up, there are calls to end VE testing. Ain't likely to happen, folks, and even if it did you might not be real happy with the result.

> Code? Schmode! (what a load?

Yep coming from a no-name ....will consider whom or what the load is ......

> You "hams" want to keep the pride and technical prowess
> within Amateur Radio into the new Century? Then do this:

> 1) Eliminate ALL code testing for ALL License classes.

Translation .....I am too lazy to learn 5 WPM. and partake of the 2nd most utilized communication mode.

> 2) Enact a complete re-vamping of the pool of the written
> exam questions.

Huh ???? revamped ... oh boy I don't even want to get in on this ..... Maybe we could add questions about gear bevels and ratios for the standard transmission-CW comparisons out there ...or wait maybe some biology of whales for buggy whip manufacture .....

> (and now for the rub)
>
> 3) DO NOT PUBLISH the question pools - PERIOD !

Good point ....try to get it done ......

> If someone wants an Amateur License, then they should have a
> working technical and theoretical knowledge of RF Theorems and
> all related aspects of electrical and electronic practice.
>
> It used to be that if you were an Amateur Operator you had to demonstrate
> a degree of professionality and knowledge
>
> Having an Extra Class licence should be *almost equal* to someone
> who has a BSEE.

Here is where the bullshit valve gets turned on ...we all have to almost have EEs to get on the radio ... Look at the name of this service-hobby-endeavor whatever ...amateur. I am a "ham" as you call it because of the "love" of radio. If I wanted to make a buck at this then I should have changed my major 40 years ago. This is the egotistical attitude held by some of those who have radio or an EE field as their life's work ....frankly I would find it quite droll to have a hobby with a work matching arrangement. The license is just the first step into an enjoyable lifetime of learning ....I nor others need know "nearly" it all before I can pound brass on 40 or yak on 20.

Both should be able to answer questions on varied
> topics of Electrical Engineering with a reasonable degree of competence.

Here we go again ... at this rate you and a few hundred other guys would have all the bands to yourselves ....sounds like a lot of fun to me. I think I'll work on my matchbook collection or better yet get into crossstich with my wife ...at least I would have someting to hang on the wall.

> Until something along these lines is attempted, Amateur Radio will
> be nothing more than glorified CB radio.

I have heard that before ....ya know it really doesn't ruffle my feathers in the least ... ya know why ??? ...because I am having fun now and over the past 40 years and guess what .. hopefully for a few more years to come. It is a shame that you are either a grumpy old gieser or a grumpy young gieser.

I've been to enough club
> meetings and hamfests where I've seen holders of Extra Class tickets
> who couldn't comprehend even the most basic of electronics theory.

Yepper there Morbitus .... I would have to agree as a lot of guys out there, CW or not, bought their tickets ..a net result of : 1. The FCC desire to rid themselves of the millstone of testing and 2. The fact that most hams are so cheap they still have their 12th birthday money so to ask them to cough up a few bucks a year proper enforcement .....good luck.

> It didn't used to be this way!

OOGAA OOGAA Bullshit alarm on ....of course it was .. how about all those "conditional" fellows out there who knew squat ... how about the people the FCC caught taking tests for others ... I know a fellow who put a lot of guys on the air with his antics ...until he got caught. There were always ways around the system.

God Bless ..... 73 KI3R Tom Popovic Belle Vernon Pa. nr Pittsburgh
... enjoying ham radio for what it is not what others would like it to be
......

Not anon at all.
My point is very valid, NCI and their like have killed a once great hobby.
The ARRL has abandoned the traditional Ham Radio (this is a matter of
survival on their part, they know the turn Ham Radio has taken and will
travel that path to save their jobs) and soon the radio manufacturers will
press for a more open market in which to sell their wares by wanting the
elimination of testing all together.

There is no "What now", it's too late, Ham Radio is dead.
Joke all you want about CB'ers taking over, but don't too shocked when it
happens. Thanks to Fred, Steve, and the likes.

As for the rest of your post, I won't stoop to your level to reply, sorry.

1866. We Need a BANDWIDTH-BASED Frequency Plan - NOT Mode-Based.

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-29 01:31:30 UTC
From: expeditionradio@aol.com
Message-ID: <20040128203130.13622.00000616@mb-m27.aol.com>
Source record: 86592

==WE NEED A BANDWIDTH-BASED FREQUENCY PLAN==
FOR THE FUTURE OF AMATEUR RADIO

Bravo! for the new ARRL proposal in the works for code-free
license restructuring. It is long overdue, and it is a
great step forward!
ARRL: Thank you for all your work...

Please consider that, due to recent radio technology and
the proposed changes to licensing structure, we desperately
need a better frequency plan than the olde "Novice Refarming
Proposal" from the 1990s that was pulled off a dusty shelf.
Instead, we need a "Bandwidth-Based Frequency Plan" for the
next decade or more.

DIGITAL MODULATION IS THE FUTURE
Digital modulation and processing is changing the way we
communicate and coexist in the HF frequency spectrum.
With the multitude of new digital and analog modulation
schemes, including "digital voice", there are compelling
reasons to integrate voice, CW, data, image, and
keyboarding "modes".
Hams want to be able to use existing technology to
simultaneously keyboard, exchange multimedia files,
and talk by voice with each other on the same frequency...
something our present rules prevent on HF.

MODE IS NO LONGER A VALID DEFINITION
Due to technology changes, the old definitions of what
a "mode" is are now blurred beyond recognition.
Existing band/mode rules are stifling creativity.

ARE WE NOT COMMUNICATORS?
One example of how our present plan stifles communication
is by keeping USA amateurs segregated and actually
preventing us from communicating with the rest of
the world on the 40 and 80/75 meter bands.
Hams want to be able to communicate via voice
internationally on the 40m and 80m ham bands.

HF FREQUENCY PLAN BY EMISSION BANDWIDTH - NOT MODE
If we are to continue to advance amateur radio into
the future, we need MODE FLEXIBILITY.
Otherwise, we will be faced with the need to be
constantly generating new proposals to the FCC to
accomodate new technology. The simplest and best

way to solve this problem is to divide the HF bands
according to "emission bandwidth" for better
distribution of spectrum activity.
This will not only encourage new research and
development in modulation techniques, but it will
help amateurs to communicate with each other by
breaking down the frequency/mode/band barriers
which have confounded us on some bands for the
past 40 years.

Here is a better HF Frequency Plan for Amateur Radio in USA.

MODE-BASED HF FREQUENCY PLAN USA

kHz
1800 to 2000 any mode <500Hz bandwidth
1830 to 2000 any mode <3kHz bandwidth
3500 to 4000 any mode <500Hz bandwidth
3600 to 4000 any mode <3kHz bandwidth
5MHz channels - mode <2.8kHz bandwidth
7000 to 7300 any mode <500Hz bandwidth
7075 to 7300 any mode <3kHz bandwidth
10100 to 10150 any mode <500kHz bandwidth
10115 to 10150 any mode <3kHz bandwidth
14000 to 14300 any mode <500Hz bandwidth
14075 to 14350 any mode <3kHz bandwidth
18068 to 18168 any mode <500Hz bandwidth
18080 to 18168 any mode <3kHz bandwidth
21000 to 21450 any mode <500Hz bandwidth
21100 to 21450 any mode <3kHz bandwidth
21350 to 21450 any mode <10kHz bandwidth
24890 to 24990 any mode <3kHz bandwidth
28000 to 29700 any mode <500Hz bandwidth
28100 to 29700 any mode <3kHz bandwidth
28600 to 29700 any mode <10kHz bandwidth

NEW AMATEUR EXTRA - ALL FREQUENCIES - ALL BANDS.

"NEW GENERAL" and "NEW NOVICE" BANDS
ACCORDING TO THE FOLLOWING FREQUENCY PLAN:

kHz
1800 to 2000 GENERAL
3510 to 3600 GENERAL AND NOVICE
3650 to 4000 GENERAL
3700 to 4000 NOVICE
5MHz channels GENERAL
7010 to 7075 GENERAL
7025 to 7075 NOVICE
7100 to 7300 GENERAL
7150 to 7300 NOVICE
10100 to 10150 GENERAL

14010 to 14075 GENERAL
14025 to 14075 NOVICE
14150 to 14350 GENERAL
14250 to 14350 NOVICE
18068 to 18168 GENERAL, NOVICE
21010 to 21100 GENERAL, NOVICE
21100 to 21450 GENERAL
21250 to 21450 NOVICE
24890 to 24990 GENERAL, NOVICE
28000 to 29700 GENERAL, NOVICE

BY YEAR 2010, 30% OF ALL HAMS WILL BE NOVICE OPERATORS
Under the new ARRL proposed license restructuring plan,
the number of amateur radio operators on HF will
increase dramatically. This is good.
We need this to preserve our frequency allocations.
We will see a vast increase in the number of "New Novices".
The new Novice operators will be valuable emergency
communicators, so we need to make room in our bands
for them to communicate.

>
> I don't see where the FCC would have to "take back work". They'd
>just have to say "The test pools are closed, adn publishing the
>verbatim responses is illegal as it compromises the validity of the
>test."

First off, they'd have to replace the entire question pool (all three tests) because there are many copies of it already out there. And then they'd need a study guide that wasn't exactly like the questions so we'd know what was on the tests. Who is going to do all that work, and who is going to foot the bill?

Second, the work of VEs would be complicated by the need to keep the pools and tests secret.

Third (and probably worst), there'd be nothing to stop Son Of Bash from doing his thing all over again. In fact, it would be even easier - just let *one* VE decide to break the rules, and the entire new pool would be on somebody's website. And untraceable. Sure. 99.999% of VEs aren't going to do that - but as Bash proved, it doesn't take many.
>
> Any "work" would be that of the VE's to not allow the tests to be

Sure. Except that in the case of Lopressor, a mistake can easily kill a
patient. In the case of most ham radio questions, that's not going to happen.

Do you get Newsweek? Good letter/article from an ER nurse on page 12.

>"problem"...It's just human nature...Amateur Radio is a technical
>hobby. Even in Amateur Radio's "Golden Ages" there were only certain
>folks who got interested in it, and an even smaller number that got
>interested and stayed!

That's one problem. Here are some more:

- Lack of publicity
- High cost of getting started*
- Competition for time and resources
- Antenna restrictions
- Certain elements of ham radio's appeal have disappeared**

* Yes, it's true that one can get on the air for very little money. But most
newcomers don't know this, and there aren't many who are going to build
an HT from an old TV set. It's true that a computer can cost as much as a
ham rig, but a computer is almost a necessity these days, and its cost can

often be rationalized by all the different things it can do. A ham rig has only its one purpose, or maybe two if you count SWLing.

** There was an excellent article some time back about why people become hams. The author cited three types of radio amateur: the experimenter/tinkerer, the operator, and the communicator.

The experimenter/tinkerer likes the techno end of it, and in extreme cases is almost never on the air because s/he's working on something new.

The operator likes the thrill of actually communicating by radio, with his/her own station and skill. DXers and contesters are prime examples. For them, the media is the message.

The communicator just wants to converse. The technology doesn't matter, it's getting the message through.

Once upon a time, amateur radio attracted all three because there were few other options open to the average person of average means. Go back just 20-25 years - the average person didn't have a cell phone, (let alone a picture-cellpbone or text messaging) or a computer, (let alone email), or a fax, or cheap long distance telephone service, etc. etc..Today those things are so common they are taken for granted. The communicators have lots of options besides amateur radio, most of them cheaper and faster.

And as for experimenter/tinkerers - when the self-proclaimed "PROFESSIONALS IN RADIO" use manufactured radios, how can we poor ignorant amateurs be expected to build anything? Those of us who do build often find ourselves being taunted and insulted by those self same professional appliance owners....

So what's left are (mostly) the operators.

> It's no different than stamp collecting, hang gliding, or
>motorcycle racing. Some people will be attracted to it, a great many
>others won't. It's no big deal that we don't have ten million
>licensees!

Agreed - but try to sell that!

Here's another point: The more hams we have, the more newbies we need to replace those who drop out. With 683,000 US hams, if only 3% drop out each year, we need 20,490 newcomers per year just to break even. To have 1% growth, we need 30,735 newcomers per year.
>>
>> >> If/when the proposal becomes an RM, it'll be comment time......
>> >

First, even if the FCC took back the process, the questions would
end up in the public domain via internet sharing, etc.

> But it's clear that's not going to happen in any foreseeable future,
> for a long list of reasons. (Most of which come down to "money", as
> in "FCC isn't going to spend it on tests for hams").

That's second. It just isn't going to happen because there hasn't
been any case made as to why it should. You and others
complain, but there just isn't any examples of gross abuse
or widespread problems. Are there occasional abuses, yes, but
clearly insufficient numbers to warrant even a concern on the
FCC's part.

> There's also the issue that after 20 years of VECs, FCC would have

Surely you jest.

Dick Bash was solely responsible for more unqualified
individuals entering Amateur
Radio than any other person(s), apart from corrupt VEC's
who accept cash in advance for the promise of a passing
grade on an exam.

Perhaps a few good apples, but the bulk of the "Bash
graduates" I've met are the most misplaced non-conforming
people I've run into on the air. True CB'ers.

The brain drain of Amateur Radio was started
by Dick Bash, and unfortunatly, I'm afraid it
might just be too late to correct the problem.

When AM is outlawed, only outlaws will run AM?

Too much boatanchor enthusiasm for this to work
well. Perhaps there needs to be "AM-Window"
allocations on 160, 80 and 40?

I don't think so. I don't know about you, but I don't go around approaching strangers so I can comment about their breasts. However, during the course of many conversations with female friends and associates over the years, some of them have used the word "tits" and so have I in response. Clearly, since the women led off with the use of that word, they obviously were not offended by my use of it in response. Clearly, at lot of this depends on the situation. With a stranger, if the subject even came up, only the most polite words would be used. With a friend, more casual conversation is acceptable. In my opinion, the woman always decides when that point is reached.

There is no qualification that someone, somewhere, somehow thinks is Hazing.

If the proposed plan to upgrade Technicians to General happens, will
not those who test afterward be able to claim that their (presumably)
more difficult test is "hazing"?

I would. If I were a prospective new ham, I wouldn't be thinking about
one-time "adjustments", the history of Ham radio, or anything like that.
I'd hear about the new tests, and be annoyed at the seeming
discrimination or "hazing".

I'd probably call the whole thing an attempt by old time hams to keep new people out of the avocation. That is what it would look like.

This about time for Bill to chime in with one of those "life is a bitch, and then you die" comments. After which point I as a prospective ham, would then apply the arguments he uses against him.

ahhh, get more people on HF argument. Sorry, that argument doesn't work, because there is a way to get even *more* people on HF by simply giving licenses away. Maybe we should look into registration for ham licenses when we get our drivers license?

And I don't know about others, but when I tune through the bands, there is plenty to listen to. Now that the cycle is winding down, 75/80 gets downright crowded in the evenings.

Ludicrous mode on:

Maybe the new influx of Hams can do something about making poor propagation on 10 meters go away. And what's the deal with 20 meters? It goes away in the evenings just when I sit down to do some serious hammin! First thing they have to do is petition the F.C.C. to make it illegal to have bad propagation..... ;^)

Ludicrous mode off...

Yes, Dick was and is a fine getleman, a truly dynamic individual.
Any negative comments I've heard about him always come from
people who are envious of his many successes, both in and out
of ham radio. Successful people will always be victim of the
envious sick people who can't stand others to be successful.

The ARRL proposal has some good points ("NewNovice") but
it also has some bad ones (free upgrades for almost 60%
of existing hams).

> ARRL: Thank you for all your work...

What work?
>
> Please consider that, due to recent radio technology and

That was also an ARRL proposal. I commented against it to FCC.

Did you?

> Instead, we need a "Bandwidth-Based Frequency Plan" for the
> next decade or more.

Agreed. But not just for a decade, but indefinitely.

Bandwidth is a better demarcation than the current rules
that limit digial/data modes.

> DIGITAL MODULATION IS THE FUTURE

How? I've worked quite a bit of DX on those bands.

> Hams want to be able to communicate via voice
> internationally on the 40m and 80m ham bands.

They can! It's done all the time. Look at the results
of the DX contests and DXpeditions on those bands.
>

Let's take a look
>
> MODE-BASED HF FREQUENCY PLAN USA
>
> kHz
> 1800 to 2000 any mode <500Hz bandwidth

Why 500 Hz? That leaves out a number of
digital modes already in use.

> 1830 to 2000 any mode <3kHz bandwidth

So you would outlaw AM and NFM? Why?

> 3500 to 4000 any mode <500Hz bandwidth
> 3600 to 4000 any mode <3kHz bandwidth

You want to widen the 80/75 meter 'phone band
by 150 kHz? Not a good idea!

> 5MHz channels - mode <2.8kHz bandwidth

Won't work. NTIA will object. It's USB only for now.

> 7000 to 7300 any mode <500Hz bandwidth
> 7075 to 7300 any mode <3kHz bandwidth
> 10100 to 10150 any mode <500kHz bandwidth
> 10115 to 10150 any mode <3kHz bandwidth
> 14000 to 14300 any mode <500Hz bandwidth
> 14075 to 14350 any mode <3kHz bandwidth
> 18068 to 18168 any mode <500Hz bandwidth
> 18080 to 18168 any mode <3kHz bandwidth
> 21000 to 21450 any mode <500Hz bandwidth
> 21100 to 21450 any mode <3kHz bandwidth
> 21350 to 21450 any mode <10kHz bandwidth
> 24890 to 24990 any mode <3kHz bandwidth
> 28000 to 29700 any mode <500Hz bandwidth
> 28100 to 29700 any mode <3kHz bandwidth
> 28600 to 29700 any mode <10kHz bandwidth

I see a pattern here - you want to drastically
widen the 'phone bands and eliminate AM and NFM
below 28.6 MHz. Why?

If the 'phone bands are widened as you propose, many of the
foreign 'phones will go still lower in the band to get away
from American hams calling them. They're already way down in
bands like 40 - and your proposal would push them even further
down, on top of CW and digital QSOs. No thanks.

>
> NEW AMATEUR EXTRA - ALL FREQUENCIES - ALL BANDS.

Nothing new about that - been that way since 1951.
>

> "NEW GENERAL" and "NEW NOVICE" BANDS
> ACCORDING TO THE FOLLOWING FREQUENCY PLAN:
>
> kHz
> 1800 to 2000 GENERAL
> 3510 to 3600 GENERAL AND NOVICE
> 3650 to 4000 GENERAL
> 3700 to 4000 NOVICE
> 5MHz channels GENERAL
> 7010 to 7075 GENERAL
> 7025 to 7075 NOVICE
> 7100 to 7300 GENERAL
> 7150 to 7300 NOVICE
> 10100 to 10150 GENERAL
> 14010 to 14075 GENERAL
> 14025 to 14075 NOVICE
> 14150 to 14350 GENERAL
> 14250 to 14350 NOVICE
> 18068 to 18168 GENERAL, NOVICE
> 21010 to 21100 GENERAL, NOVICE
> 21100 to 21450 GENERAL
> 21250 to 21450 NOVICE
> 24890 to 24990 GENERAL, NOVICE
> 28000 to 29700 GENERAL, NOVICE

I see another pattern here. You're proposing to
drastically cut down the amount of spectrum
gained by getting an Extra. Why? If anything,
the spectrum gained by upgrading should be greater,
not less.

You're proposing reducing the Extra CW/narrow data spectrum
from 100 kHz to 40 kHz and giving Novices more voice than
Extras have now. No thanks!

> BY YEAR 2010, 30% OF ALL HAMS WILL BE NOVICE OPERATORS

How do you know?

Right now there are less than 35,000 Novices out of about
683,000 US hams. That's about 5%. To reach 30%, we'd need
to reach 205,000 Novices in less than 6 years from now.

How is that going to happen?

> Under the new ARRL proposed license restructuring plan,
> the number of amateur radio operators on HF will
> increase dramatically.

How do you know? Where will the 205,000 Novices come from?

> This is good.
> We need this to preserve our frequency allocations.

Agreed.

> We will see a vast increase in the number of "New Novices".

Again - how do you know? And why do you think they'll stay Novices?

> The new Novice operators will be valuable emergency
> communicators, so we need to make room in our bands
> for them to communicate.

So do existing hams and existing modes. And there also need to be
incentives to upgrade.

Dividing the bands by bandwidth rather than content is a good idea.
But your implementation of it will have many bad effects.

A much better plan is to divide the bands into three segments: CW
only, digital, analog voice/image. CW allowed everywhere but
encouraged to stay in
its subband. Division to be about 15-20% CW only, 20-25% digital,
50-60% voice/image. The limitation on digital bandwidth would be about
1 kHz - any mode that fits in a ~1 kHz bandwidth could operate there.
Modes from 850 shift FSK RTTY to some forms of digital voice could be
used in the digital subband, but not any analog voice modes.

Drastically widening the voice subbands will not encourage development
of
digital modes. Indeed, it will do exactly the opposite. Your plan
rewards
the use of spectrum-inefficent modes at the expense of
spectrum-efficent modes.

And while I hope we do get lots of new hams, your predictions of 30%
Novices
are wildly optimistic.

Ah, but directors do listen to members. Roanoke Division Director
Bodson read my e-mail concerning the removal of "Section News" and
contest line scores from QST. He listened at Jackson's Mill during the
state ARRL convention as I outlined my views and the reasons for them.
Then he himself introduced the motion to bring the changes about.
"Listening to" is not the same as "acting on the views held by"
members.

"Sycophant", not "syncophant" (used thrice over several days).
"Belligerent", not "beligerant".
"Atilla", not "Atila".

The rest of Doctor Anderson's lecture has been omitted since there is an ARRL (once a local Hartford, Connecticut club but no longer) and there is an amateur radio.

Why is with your shipping charges fetish? There should be some
incentive for folks to buy League publications from dealers, saving
shipping costs (that's if the consumers forget that they are going to
pay sales tax when they buy from dealers). MFJ does the same thing.
Buy direct from MFJ and pay full list price. Almost all MFJ dealers
discount substantially.

Tell us how that differs from how things work at AARP, NRA, VFW or
American Legion, Len.

What is the deal with you and the ARRL? You aren't a League member and
you aren't a radio amateur. What is any of this to you?

Don't forget that Kim wants it both ways. She describes her
more-than-ample superstucture and requests a callsign because of it but
she notes with disdain the looks she gets from women on the street (as
if she has a way of knowing what other women are thinking). She want to
draw attention to herself but claims that she didn't ask to be born
with.... Well, you know the drill.

Kim empathizes with strippers, lets us in on what she'd like to tell
other women at cocktail parties, tells us which foul words she'd yell at
a football game and clue us in to what prompted her to choose her tacky
call based upon a dare.

And what is the deal with the publications in general? I enjoy them and buy them. They gather information that is of interest to Hams, and we buy them and they make money. They are happy with the arrangement and so am I and plenty of other people. Sounds like the American way to me!

Controls QST? Leonard, the League owns QST. It is the ARRL's membership magazine. Imagine getting free ARRL adversts in the ARRL magazine. You may have blown the cover off this thing.

> Since ARRL arranges to OWN first rights to all articles in
> QST, they can reprint that material in Handbooks or anything else
> as much and as many times as they wish without giving a cent
> more in compensation to authors. Fabulous setup for making a
> bit of money for the League. They've got it sewn up tight. :-)

I'd think a fellow who frequently touts his talents as a "PROFESSIONAL WRITER" would be up on what "first rights" are all about.

www.writing-world.com says:

" 'First' rights give a publication the right to be first to publish your material in either a particular medium or a particular location. FNASR, for example, generally applies to print publication, within North America. First British rights means the right to publish a piece first within Britain -- even if it has already been published somewhere else. First electronic rights means the right to be first to provide the material in electronic format. Note that one can sell many different variations on 'first' rights, as long as these variations don't overlap."

So either QST isn't buying only "first rights" or you have made yet another error. Let's give your statement the last rites.

> Note: Retail outlets for League publications make a small profit
> on publishing sales, yet the price for each one is the same whether
> one buys it in HRO or orders from Newington. The difference is
> that anyone ordering from Newington has to ALSO pay shipping

> make the retailer's discount difference for themselves! Lovely.

There's one interpretation. The dealer can sell the books without shipping charges, thus saving a buyer the shipping charges. I don't have an amateur radio dealer closer than two hours away. If I order the ARRL Handbook from R&L Electronics or Universal Amateur Radio, I'm going to pay the same price as if I'd bought from ARRL--and I'm going to pay

shipping.

> "Endowment funds?" I doubt there are many millionaires out
> there bequeathing large sums to the League. Nowhere close to

You'd be surprised. Then again, you aren't a radio amateur nor are you
an ARRL member.

> [now watch all the ARRL syncophants come out, panting with rage

Even better would be to ask questions that were not covered in ANY
book. That'd make sure only good smart people got in.

Seriously, there is not much these days that doesn't have a supply of Q
and A's somewhere.

I was up at Barnes and Noble a few days ago, and saw they have pools for
many professional trades. Electrician, HVAC pro's, etc. You will have a
looong haul to get the pool eliminated for Ham radio tests.

The answers in the pool are shuffled around for at least the Extra test.

There are 806 questions to choose from, up from 665 in the previous pool.

What is the difference between a pool of questions and a book in which
the answers are in there in text form - or do you suggest that there be
no actual study guide for the tests? If there is a study guide without
the needed material in it, it isn't a study guide.

Good heavens! A person has to take "almost" 4 years of college to qualify for Extra? If ya wanna tie it to education, how about BS for Technician, MS for General and PHD for Extra. Then all those hams would be real smart!

Lessee, I have a kid in college now, and with Educational discount and
him living at home, it's costing $10K per year. Assuming no discount,
we'd be looking at $40K per annum. Living on campus would add even more.
So the prospective ham would be expected to spend "almost" 4 years,
and "almost" 40K to get their Extra?

Getting back to the college analogy, Students today and in my day are
expert at the art of cramming. Study like a madman/woman before the
tests, stay up all night cramming. Take the test and do okay, unless you
have a brain cramp during it.

Ask them a question from the test the next day, and they draw a blank.
All that did was to put that knowledge into short term memory, and most
of what they learned is gone after the test.

So not having a question pool isn't going to guarantee much.

My proposal would not be anywhere near as radical as the others going around. And yes, I do think that ARRL's proposal is radical. Hans' proposal, with all its quirks, is much more consistent and rewarding of knowledge than the league's idea. If it were a choice between the two, I'd choose Hans' proposal in a second.

Maybe I'll write something up, and bounce it off you.

> preventing us from communicating with the rest of
> the world on the 40 and 80/75 meter bands.
> Hams want to be able to communicate via voice
> internationally on the 40m and 80m ham bands.

Yeah...That wall full of QSL cards attests to how I've been
unable to "communicat(e) with the rest of the world"...

I have 52 DXCC entities on 75m phone and 87on CW. I have 85 DXCC
entities on 40m phone. I am two shy of DXCC on 40m CW. Not bad for
low power and wire antennas close to the ground.

> HF FREQUENCY PLAN BY EMISSION BANDWIDTH - NOT MODE
> If we are to continue to advance amateur radio into
> the future, we need MODE FLEXIBILITY.

After one reads through this post they will see that ALL you
suggest, in the end, is dropping specific modes by name. The result,
however, is just an expansion of the U.S. phone bands.

Don't get me wrong, I completely agree that we can afford to
expand our phone allocations. However YOUR premise is that we enact
your ideas to deter "stifling" of experimentation.

In the long run, you're wedging more efficient narrowband modes
into smaller and smaller subbands to the preference of the less
efficient wideband modes...Specifically, SSB voice.

> Otherwise, we will be faced with the need to be
> constantly generating new proposals to the FCC to
> accomodate new technology. The simplest and best
> way to solve this problem is to divide the HF bands

> according to "emission bandwidth" for better

> which have confounded us on some bands for the
> past 40 years.

All you've done is change the language. The application will be
unchanged.

And the FCC has been absolutely wonderful about accomodating new
technologies.

> Here is a better HF Frequency Plan for Amateur Radio in USA.

It's nothing of the sort. All you did was change some language
in order to justify expanding the phone bands.

> MODE-BASED HF FREQUENCY PLAN USA
>
> kHz
> 1800 to 2000 any mode <500Hz bandwidth
> 1830 to 2000 any mode <3kHz bandwidth
> 3500 to 4000 any mode <500Hz bandwidth
> 3600 to 4000 any mode <3kHz bandwidth

All this did was eliminate the opportunity for AM'ers to operate,
and also for others who wish to experiment with whatever new WIDEBAND
modes that might manifest.

> 5MHz channels - mode <2.8kHz bandwidth

No change here. This is exactly what we have right now.

> 7000 to 7300 any mode <500Hz bandwidth

No change here. "<500hz bandwidth"...?!?! Narrowband data
modes...CW, RTTY, etc.

> 7075 to 7300 any mode <3kHz bandwidth

You moved the phone bands down to 7075...other than that, no
difference here. Also, you suggest we can't communicate
"internationally", yet the "phone band" goes down to 7030 or
7050...Why, if your intent is to increase interoperability with
Europeans, did you lop it off there?

> 10100 to 10150 any mode <500kHz bandwidth
> 10115 to 10150 any mode <3kHz bandwidth

The band here is only 50kHz wide to start with, yet you suggest
we allow phone operations to take up 80% of the band which means fewer
stations on the band at the same time. How is that an improvement?

> 14000 to 14300 any mode <500Hz bandwidth

No change.

> 14075 to 14350 any mode <3kHz bandwidth

Again, you moved the phone band down under the guise of deleting
terms of SPECIFIC modes, yet the only mode that's going to move here
will be SSB phone.

> 18068 to 18168 any mode <500Hz bandwidth

No change here. CW and data, regardless of what you want to call
it.

> 18080 to 18168 any mode <3kHz bandwidth

Just moved the phone band down again...Do we see a pattern here?

> 21000 to 21450 any mode <500Hz bandwidth

Yawn.....

> 21100 to 21450 any mode <3kHz bandwidth

Again...more phone band.

> 21350 to 21450 any mode <10kHz bandwidth

Why? If you were going to have a 10kHz passband, the lowbands
were the place to do it since that's where most of it exists. This
could only promote FM use here.

Again, why?

> 24890 to 24990 any mode <3kHz bandwidth

Why no protection for narrowband modes? PSK, AMTOR, RTTY, and
yes...CW.

Might as well just channelize it and wait for Ranger to come out
with a "multimode" radio for it...

Oooops! Pretty much already done!

> 28000 to 29700 any mode <500Hz bandwidth

Still no change, Bonnie.

> 28100 to 29700 any mode <3kHz bandwidth

Just moved that phone band down again, Bonnie. Except during
contests, there's ample room all across 10 meters for just about
anything you could want to do already.

> 28600 to 29700 any mode <10kHz bandwidth

Here you just DELETED wideband capability where it already
exists. This would force existing repeaters to go QRT. Why?

> NEW AMATEUR EXTRA - ALL FREQUENCIES - ALL BANDS.

Snip.

> "NEW GENERAL" and "NEW NOVICE" BANDS
> ACCORDING TO THE FOLLOWING FREQUENCY PLAN:

Snip.

> BY YEAR 2010, 30% OF ALL HAMS WILL BE NOVICE OPERATORS
> Under the new ARRL proposed license restructuring plan,
> the number of amateur radio operators on HF will
> increase dramatically. This is good.
> We need this to preserve our frequency allocations.
> We will see a vast increase in the number of "New Novices".
> The new Novice operators will be valuable emergency
> communicators, so we need to make room in our bands
> for them to communicate.

The Novice Class license should be just for that...Novices. When one has gained experience and confidence in what they are doing, it's time to move up. Then they will have more than adequate spectrum in which to "communicate".

Your bandplan only addresses HF. Ninety-nine percent of "emergency communications" takes place above 50mHz.

Nice try, Bonnie. You're thinking, and that's good, but the ultimate result was all you did was expand the phone bands on HF where very little "experimentation" is going on anyway.

>took a statistics class can tell you that.

Not the point! Looking at the comments tells us what those who
cared enough to comment think. Just as an election tells us what those
who cared enough to vote think. The FCC makes it incredibly easy to
file comments by email or paper, so it's not like the old massive copying
mess of the old days.
>

>
> Bonnie, are you ON the bands at all?

Steve,

There *is* a valid concern here. Part 97 definitions
do limit the kinds of modes we can use on HF, even
if they are narrow.

For example, we're not allowed
to run datamodes in the 'phone subbands. Not even
narrow-as-heck PSK-31. OTOH, if you can figure
out a way to send voice in a 400 Hz channel, you
have to do it in the phone subbands, even though it's
half the width of an 850 shift FSK signal, which can
be run in the CW/digital subbands.

Want to try out a form of PSK-31 that is, say, <1 kHz
wide but over 1200 baud? Sorry, not legal
on amateur HF/MF below 25 MHz without an STA.
(Might not be legal on 10 - check the rules).

Imagine a mode that is a combination of PSK-31 and
SSB voice, with the PSK carrier where the SSB carrier
would be. Send data and voice at the same time. Interesting?
Yes! Possible? Of course! Legal? No.

>exists. This would force existing repeaters to go QRT. Why?

No AM on 160, 75, 40, 20....
>
>> NEW AMATEUR EXTRA - ALL FREQUENCIES - ALL BANDS.
>
Nothing new about that..

> Snip.
>
>> "NEW GENERAL" and "NEW NOVICE" BANDS
>> ACCORDING TO THE FOLLOWING FREQUENCY PLAN:
>
> Snip.
>
>> BY YEAR 2010, 30% OF ALL HAMS WILL BE NOVICE OPERATORS

How? To reach that level, we'd need about 30,000 new hams per year for
the next six years *and* no upgrades of any of them. If half of them go
for General of Extra, we need 60,000 per year...

no wait, if we get that many, the 30% number gets bigger, so we need
even more newcomers...

>> Under the new ARRL proposed license restructuring plan,
>> the number of amateur radio operators on HF will
>> increase dramatically. This is good.
>> We need this to preserve our frequency allocations.
>> We will see a vast increase in the number of "New Novices".

That's what they said would happen when the Tech lost its code
test. We saw a surge for a while, then back to almost the same
level of newcomers as before.

Check the growth of the entire ARS from 1991 to 2000, and compare
it to the growth from 1982 to 1991.

>> The new Novice operators will be valuable emergency
>> communicators, so we need to make room in our bands
>> for them to communicate.
>

> The Novice Class license should be just for that...Novices. When
>one has gained experience and confidence in what they are doing, it's

Bingo.
>
> Your bandplan only addresses HF. Ninety-nine percent of
>"emergency communications" takes place above 50mHz.
>
> Nice try, Bonnie. You're thinking, and that's good, but the
>ultimate result was all you did was expand the phone bands on HF where
>very little "experimentation" is going on anyway.
>
There's more to it than that, Steve, but the proposed solution creates
more problems than it solves.

I really do hope we get lots of newcomers, but 30% Novices in 6 years
is kinda optimistic.

Dwight:

I have many female friends and acquaintences, and I almost never hear the word "tits" used to describe their breasts. "Boobs," yes, occasionally, but not the "t" word. I digress; this is about Kim, the reason why she requested her call sign, and the unfavorable image it projects on others who are, or may be, involved in the ARS. As a woman who presumes to be taken seriously as an intelligent, competent woman of the modern era, she is, in actuality, setting herself and all other women back to the time when they were mere objects of prurient interest. Or could it be that she really wants to be seen that way? Unfortunately, the image is objectionable in any context, and it's effect on the ARS has the potential to be exactly as Mr. Hollingsworth predicted.

Ouch!

1st quarter math in an associates program (engineering science) was calculus. You betcha it wouldn't be pretty if the requirements were at a BSEE level! You start throwing around a bunch of inductors, resistors, and capacitors in a network with some ac source and ask the amplitude, direction, and phase of something .... and that is still at the associate's level. It would be real ugly, for sure LOL.

Glad to see the newsgroup still functioning at about the same level it has been for the past few years.

Amateur Radio Newsline™ Report 1380 – January 23, 2004

CLOSED CIRCUIT ADVISORY

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator. We haven't asked for quite some time, but we need contributions TODAY. If you value this service, please help.

We're here to serve you for as long as you want us. Your response over the next several weeks will provide that answer.

The address for the Amateur Radio Newsline is Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you REALLY soon, I'm Andy Jarema, N6TCQ.

**

Amateur Radio Newsline report number 1380 with a release date of Friday, January 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL says that it will petition the FCC for a code free entry level license with high frequency phone privileges and Amateur Radio Neewsline announces the Roy Neal, K6DUE, Amateur Radio Mentoring Project. These stories and more coming your way on Amateur Radio Newsline report number 1380 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO POLITICS: A NEW DIRECTION

Topping the news this week -- honoring one of our own. Enlisting an army of volunteers to make us all a little bit better -- and doing it in the name of the late Roy Neal, K6DUE. But first -- the biggest organization of Amateur Radio operators in the world finally takes a position on the code versus no-code issue. The ARRL is asking the FCC in a petition for rulemaking to create a no code entry level H-F license for anyone who can successfully pass a written exam of a mere 25 questions. If the FCC accepts the ARRL idea, it would keep the more stringent requirements for the Amateur Extra Class license, including their ability to send and receive Morse code. Amateur Radio Newsline’s David Black, KB4KCH, takes a look at the details of what the ARRL is asking the FCC to do:

--
Code free access to ham radio's high frequency bands ... it's part of what could change amateur radio's complexion forever. And it could become reality.

The ARRL says it will ask the FCC to make sweeping changes to the United States amateur radio service. Perhaps the biggest change of all: Creating a new entry level ham radio license that grants access to high frequencies without requiring any Morse code proficiency.

But that's not all. The League also proposes consolidating all amateur radio licenses into three classes: Novice, as it's being called for now, General and the highest level, Extra. And only the Extra class license would require Morse code proficiency--of 5 words per minute. The new Novice license would require a 25-question written test and would offer limited HF, Morse code, data and phone and image privileges on 80, 40, 15 and 10 meters. Novices would also have VHF and UHF privileges, including access to 6 meters and 2 meters. Their power levels would be restricted to 100 watts on 80, 40 and 15 meters, and to 50 watts on 10 meters and higher.

The middle amateur radio license would continue to be the General, but it would include all current Technician, Tech Plus and present General license holders. This license would not require a Morse code test. Under this proposal, if you are a current Technician or Technician Plus, you would automatically obtain General class privileges with no additional testing. The current General examination would remain unchanged for new applicants.

The third license class, the Extra, would involve the fewest changes. Under the League proposal, hams with Advanced class licenses would essentially automatically become Extra class because of similarities in the technical proficiency required for both levels. New applicants for the Extra class license would have to pass a 5 word-per-minute code test--the written test would stay as is. If you're currently a Novice, Tech Plus or General license holder, you would receive a lifetime 5 word-per-minute credit.

The proposed changes got the blessing of ARRL's Board of Directors January 16th. The proposals are the creation of a League Executive Committee acting at the Board's direction. The new structure suggestions come as a result to changes in international radio regulations that are part of the World Radiocommunication Conference 2003. At the same time, the FCC has been wanting to streamline the amateur radio licensing structure which it began more than five years ago.

How do radio amateurs feel about the changes? Reaction is mixed:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of newscast.
--

Janice Rock, AF4LT, sees benefits and drawbacks:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of newscast.
--

Supporters say the new structure offers a true entry level license with HF privileges that should boost growth in the amateur radio service. While some hams may claim that taking away code for HF access damages amateur radio, other hams dispute that. Bill Levey, WA4FAT:

--
Bill Levey, WA4FAT - Audio Only Report: Please listen to audio version of newscast.
--

Supporters say the changes will help amateur radio by allowing new Novices to participate in emergency nets on HF sideband. The impact of this proposal on amateur radio's long term future has Janice Rock concerned for another reason:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of newscast.
--

League Executive Vice President David Sumner K1ZZ says the Novice class license could wind up getting a new name, more appropriate for the times -- this, as amateur radio faces what could be one of the biggest changes in its history.

From Birmingham, Alabama, I’m David Black, KB4KCH for the Amateur Radio Newsline.

--

More is in cyberspace at the League’s website. You will find it at www.arrl.org (ARRL, ARNewsline(tm))

**

RESCUE RADIO: NYC ARES ACTIVATES FOR COLD WEATHER

The New York City District Amateur Radio Emergency Service was called into action last Wednesday evening, January 14 th. This, after the American Red Cross of Greater New York contacted Mike Lisenco N2YBB. Lisenco is the District Emergency Coordinator for ARES and the message was clear: Call together the members of ARES to provide emergency communications between the warming centers being established in the five boroughs and Red Cross headquarters in Manhattan.

--

Lisenco: “Once I received the phone call from the coordinator of disaster volunteers at the Red Cross of greater New York, the first thing that I did was to call the five EC’s we have here in New York City. Each borough which constitutes a county has its own EC. In turn they called their people looking staff the shelters.”

--

By the next morning, New York City District ARES Emergency Coordinators had more than a dozen Amateur Radio operators on standby awaiting the activation. Friday evening they went into action after Mayor Bloomberg announced the

shelter openings. The ARES radio operators manned their posts throughout the operation, which lasted the better part of a day during some of the most frigid weather ever recorded in the Big Apple. The hams finally stood down on Saturday afternoon.

This is not the first time that New York City District ARES has provided critical communications for emergencies. They were active with the oil barge explosion at Port Mobile on Staten Island, the Northeast Blackout in August 2003 and did heroic work following the terrorist attacks of September 11, 2001. (ARNewsline(tm), NYC ARES)

Break 1

Stay tuned for the details on one of amateur radios most ambitious mentoring projects. It’s coming up later in the newscast, but first From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Peace River Repeater Associations systems serving Punta Gorda Florida.

(5 sec pause here)

**

ANNOUNCING THE ROY NEAL, K6DUE, AMATEUR RADIO MENTORING PROJECT

Amateur Radio Newsline is paying tribute its late vice president, Roy Neal, K6DUE, by naming an ongoing mentoring program in his honor. Roy became a silent key last August after surgery. He was 82.

The Roy Neal, K6DUE, Amateur Radio Mentoring Project is designed to pair new hams -- often called “newbies” -- with veteran amateurs. This, in the hope that some of the established hams’ operator skills can be passed down to new generations.

--

Pasternak: “ere is a long tradition of mentoring, often called “elmering,” in Amateur Radio. No one knows the origin of the term, but the first teacher might well have been named “Elmer.” My mentor was a guy named Charlie Zussman. Back in the 1950’s he was WA2AKX. Today he’s WE2R. And his helping me become a ham has lead to a friendship that has lasted a lifetime. What he taught me was that tradition is an important part of the hobby.

--

That’s Bill Pasternak, WA6ITF, who has produced these newscasts since 1977. He and the Newsline Board of Directors came up with the idea for this project. Bill says that ham radio has become a tremendously complex arena and new hams often don’t know where to turn for help:

--

Pasternak: “We have licensed hams who are truly experts in numerous fields ranging from bouncing radio signals off the moon, to writing complicated software which enables new forms of two-way communication. We want to take advantage of that knowledge base to help newcommers.”

--

While Amateur Radio includes world-class experts in a number of specialties, there are literally thousands of hams who have operating skills also worthy of passing on. For example, contesting is very popular, yet it is a tough nut to crack for a beginner.

--

Pasternak: “Contesting is intimidating. I know. I’m just getting started. Good contest operators often are able to contact four stations per minute for hours at a time. The great ones do even better than that. How they are able to do that is a skill that should be passed on to newcommers.”

--

Two large pools of Amateurs are needed to make this mentoring project work. First, there must be a group of volunteers who have a skill and are willing to share their time. The second group is made up of the large number of beginners who want to learn.

One of the nations top mentors, kit building expert Joe Eisenberg, K0NEB, has agreed to help set up databases and to begin the process of matching mentors with beginners. All we need to know is if you need assistance or if you are able to mentor others. We also need your name, call letters, address with zipcode, phone number, e-mail and when its best call.

The special e-mail address to register is mentor@arnewsline.org.

Mentors might be matched by zipcode – and be in the same town, or they might be half-way around the world from each other and communicate by e-mail. Either way I think we can make it work.

--

Pasternak: “The project’s namesake, Roy Neal, K6DUE, was himself a mentor and not only in ham radio. I know this first hand because he is the one who taught me to become a better writer and producer.

More important: Those of us who knew Roy, also know that helping others was a very important part of his life. As such. we feel that the least that we here at Amateur Radio Newsline can do is keep his memory alive with this project.”

--

Again, that e-mail address to register for the Roy Neal, K6DUE, Amateur Radio Mentoring Project is mentor@arnewsline.org More information is on our website at www.arnewsline.org

And Roy, old buddy, this one is for you! (ARNewsline(tm), W6RCL)

**

THE BPL FIGHT: NORTH CAROLINA HAMS MEET WITH POWER PROVIDERS

Slow but steady progress in dealing with the imminent release of Broadband over Poweerlines in North Carolina. Gary Pearce, KN4AQ, is here with more:

--

Progress Energy fulfilled their promise to North Carolina Amateur Radio operators and invited several Raleigh area hams to observe their new Phase II BPL trial in a rural subdivision south of the city on January 15th.

BPL – Broadband over Power Lines – is a system for delivering high speed Internet through neighborhoods and into homes and businesses via the power lines. The technology places radio frequency signals on the power lines in parts of the spectrum between 2 and 80 MHz. Those signals radiate to some extent, and can cause interference to a receiver in the vicinity of the power lines. Naturally this has become cause for great concern among hams worldwide.

In Raleigh, three ham radio operators met with engineers for both Progress Energy and Amperion, the equipment manufacturer. Two of the Progress Energy engineers were also hams.

The BPL trial consisted of a half-mile of overhead feeder along a highway, and a few dozen homes passed by buried power lines. A “repeater” amplified the signal about every other block.

We were particularly interested in the spectrum used. We learned that each run of BPL, from repeater to repeater, uses two blocks of spectrum, 2.5 and 3.5 MHz wide. At each repeater, a different block of spectrum is required.

The overhead feeder segment in this trial used spectrum blocks around 25 and 29 MHz. We listened with mobile equipment driving on the road adjacent to the power line, and received S-9 signals in the immediate vicinity of the line that sounded like this when tuning across the 10 meter band:

--
[audio clip of BPL signal]
--

The signal fell off quickly when driving away from the line, but a ham at a home station almost a mile away heard the 10-meter BPL signal about S-6 using an 80-meter dipole antenna.

Amperion says a Network Operation Center can move any repeater to another block of spectrum, or notch part of a block by remote control, to eliminate interference, but they were unable to demonstrate that for our test.

Even with that flexibility, fitting 3.5 MHz wide blocks of energy in between ham bands would be a delicate jigsaw puzzle. That much “empty” spectrum exists only between the 30, 20 and 17-meter bands, and it’s empty only from the perspective of Amateur Radio.

Skip could completely upset the equation. BPL signals, which are similar to very low power QRP Amateur signals, could reflect off the ionosphere and appear

hundreds or thousands of miles away. The energy of one isolated trial area might not have much impact, but a mature nationwide system with hundreds or even thousands of installations using the same spectrum blocks could be a very different story.

Yet to come in BPL is a comprehensive report from the NTIA; an FCC Notice of Proposed Rulemaking for changes in Part 15, based on last year's Notice of Inquiry; and a decision by your local utility about getting involved in BPL.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina

--

The hams at the test included Wake County ARES E-C Tom Brown, N4TAB, Technical Specialist Frank Lynch, W4FAL, and reporter Gary Pearce, KN4AQ. (ARNewsline(tm))

HAM RADIO IN SPACE: ECHO TEAM REPORTS PROGRESS

AMSAT North America reports that work on the Echo satellite is progressing smoothly. According to the ham radio space agency, an integration and testing team lead by Jim White, WD0E, and Mike Kingery, KE4AZN, was 2003 at SpaceQuest in December. SpaceQuest is in Virginia and during the initial satellite integration session, about 90% of Echo's hardware was successfully tested. Also, most of the telemetry calibration was accomplished. Especially encourage is word that the new experimental L-band receiver and S-band transmitter functioned well during their first tests.

For more information on the progress of this new bird take your web browsder over top see www.amsat.org and take the "Echo Project Info" link. (AMSAT--NA)

DX

In D-X, word that F6FXS will be active as FG/F6FXS from Guadeloupe through the 13th of February. He will operate on 40, 30, 20, 15 and 10 metres on CW only. Look for him between 13.00 and 14.00 and again from 22.00 to 24.00 UTC. Q-S-L as directed on the air.

And GB4BLC, standing for 'Bedworth Lions Club', is being operated by Brian, G8GMU, until the 29th of January to raise awareness of the work of Lions International. (Varios DX sources)

**

THAT FINAL ITEM: THE LIFE AND TIMES OF K2ORS

And finally this week, a new book is in the works about a broadcast legend who also happened to be a ham radio operator. Take a listen:

--
Shep: “Well there I am playing that character deep in the jungle. We have $400,000 of camera equipment that’s being eaten by mosquitoes. They eat Betamax cameras. You don’t know about the tropics. Leaches are coming up the tripods, when a runner comes down the beach. He’s a Chumaro Indian.

He’s running. He’s sweating. He arrives in the clearing. This is exactly what happened.

The Director is standing there. He's sweating and saying: '...damn, we got to get this.' We kept trying to clean the lens off. It was a tough shoot.

And this Chumaro runner comes up and he's saying; 'Message. Message." He has a message. The Director looks at it and he hands it to me and the message said -- and I quote: '...The Dayton Hamvention called. They want you to speak this spring.'

I said: 'For cripes sake, how did they know I was in the jungle' (laughter)"

--

That was the late Gene Shepherd, K2ORS, speaking at the Dayton Hamvention several years ago. Shep as he liked to be called, passed away in 1999. Now, author Eugene Bergmann has set to work writing the definitive book about the ham who invented talk radio. In a recent interview with Amateur Radio Newsline, he told us why:

--

Bergmann: "Well I first started listening to Jean Shepherd way back in '56 when I was in college and I think what he had to say and the way he said it affected my thinking for the rest of my life. Soon after he died I realized how important he was to my way of thinking. That he was like an old friend. I got more and more involved in learning more about him and I finally decided that I had to write a book about his art."

--

In writing his book, Eugene Bergmann wants to make certain that every aspect of Shep's life and career is accounted for, including his love of ham radio. And a love it was as in this very rare recording where he accurately predicted the explosive growth in F-M and repeaters in general and one New York City machine in particular:

--

Shep: "I don't think you guys who sit around every night like you do recognize the already legandary status of this repeater outside of this area. I just came back from a trip from the Canadian border and all the way down through New England and way up in the Northern part of Maine I worked guys and the one thing that they all talked about was SUR (WA2SUR). And they really was a quality of 'wow' in their voice. I think that in another ten years there's no telling how immense this repeater will be and what a structure it will be. I am very serious when I say this. I think we are in the beginning of a thing here and I think that ultimately 25 years from now people will look back on the early two meter guys like us -- we're considered early guys now -- with a legendary awe. You know, with a quality of awe, like 'my god -- they started it all."

--

That was recorded way back the evening of June 21st 1972 over the then WA2SUR repeater in New York City. K2ORS was right on in his F-M and repeater growth

forecast. Bergmann says that’s the kind of he plans to include:

--

Bergmann: “In May of 1968 in one of his broadcasts he said: ‘...I became at the age of ten, totally, maniacally and for life I might point out -- completely skulled out by Amateur Radio.’ So he was quite an enthusiast up to his death in ‘99”

--

Sound intriguing? Well you can find out a lot more about Eugnene Bergann’s book and how you can help to writer it on this weeks RAIN Report. Just go to www.rainreport.com or dial into area code 847-827-7246, sit back and enjoy a quarter hour with Eugene Bergmann and his new book on the legendary Jean Shepherd, K2ORS. (ARNewsline(tm))

AMATEUR RADIO NEWSLINE™ ANNOUNCES CREATION OF THE ROY NEAL, K6DUE, AMATEUR RADIO MENTORING PROJECT

January 15, 2004 (Los Angeles California) The Amateur Radio Newsline Inc., a Federally chartered 501(c)(3) not-for-profit corporation has today announced the creation of the “Roy Neal, K6DUE, Amateur Radio Mentoring Project.” This is a program designed to take newly licensed radio amateurs and place them one-on-one with veteran hams so that they may learn the traditions and operating skills that no classroom or home-study environment can teach.

Roy Neal, K6DUE, was a driving force within the structure of Amateur Radio Newsline. He passed away on Friday, August 15, 2003 from complications arising from heart valve replacement surgery a few days earlier.

In addition to serving as Amateur Radio Newsline's Vice President, he was also our teacher, advisor and friend. Those of us who had the honor of knowing Roy were keenly aware of his willingness to help anyone better themselves. He was always willing to share his lifetime of knowledge in many areas including science, space exploration and Amateur Radio. With this in mind the Amateur Radio Newsline Board of Directors at its annual meeting on December 13, 2003 voted unanimously to honor Roy’s memory by creating a program to carry on his vision.

What we have named “The Roy Neal, K6DUE, Amateur Radio Mentoring Project” is loosely based on a similar program created by Broadway performer Ann Reinking. Reinking was a student of and performer with the legendary choreographer/director Bob Fosse. She is now carrying on the “mentoring” tradition in the art of dance through her own educational foundation, the Broadway Theater Project. This is a Florida based training program connecting students with seasoned theater professionals. If we may quote Ms. Reinking:

“Its sort of an un-written law or rule in the world of dance that you pass on what you know. This particular craft is at its best when its passed from one person's hands to the next.”

Now, if you think about it, what Ann Reinking says about "dance" applies equally to our world of Amateur Radio. Maybe more so, because, for decades the knowledge and tradition of our hobby/service was passed down from seasoned operators to newcomers, one to one. Unfortunately, in the ham radio of today, this art of mentoring that we call "Elmering" seems to be disappearing. It is being replaced by "weekend cram class training" and/or the more tedious world of “home study.” Both provide lots of technologically trained hams, but they do not turn out skilled operators or hams who really appreciate the art of amateur radio. Only one-on-one “mentoring” or “Elmering” can do that.

“The Roy Neal, K6DUE, Amateur Radio Mentoring Project” is to be a similarly structured program that fosters those one-on-one relationships that go well beyond the knowledge necessary to pass a ham radio exam. It will put an emphasis on our traditional ham radio values by placing new hams into contact with skilled operators who are willing to teach them such radio art-forms as how to work DX, or run a contest, build and operate a repeater, talk by bouncing signals off the moon, kit construction and anything else that makes a ham a ham. In essence, to pass along the living traditions that make ham radio what it is to all of us old timers.

To make this work, two groups of hams are needed. First we need skilled operators who are willing to donate time to assist those in need of training. We also need new hams to come forward and say: “I want to learn more.” We will do our part by matching the mentors to those in need of Elmering.

To get the project underway we have asked Joe Eisenberg, K0NEB, to create the necessary databases and begin the process of matching volunteer mentors to those wishing instruction. We are also asking both groups to send us an e-mail at mentor@arnewsline.org. In your note please state if you are offering to be a mentor or are in need of training. Please include your name, call, address, e-mail address with zipcode, phone number, best time of day to call and any other pertinent information.

It is our hope that the nation's Amateur Radio community will join with us to make "The Roy Neal, K6DUE, Amateur Radio Mentoring Project" a part of the traditions of the hobby, and that it will become a lasting memorial to the radio amateur who gave so much of his life to making Amateur Radio the best hobby and service in the universe.

Amateur Radio Newsline(tm) Report 1381 – January 30, 2004

Amateur Radio Newsline report number 1381 with a release date of Friday, January 30, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hams across the nation react to the ARRL restructuring proposal and the first B-P-L law suit involving ham radio is threatened in Austria. These stories and an interview with ARRL President Jim Haynie, W5JBP, highlight this weeks Amateur Radio Newsline report number 1381 coming your way right now!

(Billboard Cart Here)

**

RESTRUCTURING: HAMS REACT TO THE ARRL NO-CODE PROPOSAL

Hams are starting to react to the recent ARRL proposal to restructure the United States Amateur Radio service, and not surprising the comments are as diverse as the community itself. Amateur Radio Newsline’s David Black, KB4KCH, is at our South-East Bureau with this part of the story:

--

If you listen to the ham bands and check out the comments on the qrz.com website, it appears that most amateur radio operators have a somewhat sedate response to the ARRL's restructuring proposal. While some activists make their opposition quite vocal, the majority of comments so far seem to accept the League's initiative, 'though some do express reservations.

"I can live with this" is how some comments go. Others more strongly support the League by saying, "right on, A-double-R-L." The biggest concern most express centers around the ability to monitor the airwaves for rules compliance if explosive growth results. As one operator on 15 meters says, "If we get a million new hams, will the FCC give us 500 more Riley Hollingsworth's to keep them in line?" Hollingsworth handles amateur radio enforcement matters for the Commission.

Some operators say the League's proposal will wind up dumbing down amateur radio. Some even claim to have resigned their ARRL membership, 'though so far, no proof of that has surfaced. Vehement opponents of restructuring may in fact terminate their League memberships, but the number is not expected to be significant.

Restructuring is not a done deal. Announcement of the League's proposal is only the start. The League will formally request that the FCC make a rules change. Once the Commission receives that request, it will be up to the FCC to decide

whether or not it will consider the League proposal put it out for public comment. Chances are that it will. Once the proposal is assigned a rule making designation, you will have a chance to make your opinion known.

Comments are likely to come from the general public, the business community and any special interest groups as well as those who hold an FCC assigned call sign.

Stay tuned -- the story's just beginning.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Unless the FCC decides to place the ARRL request on a separate fast-track, you can expect the agency’s first action to be putting it out for initial comment sometime in the next several weeks. (ARNewsline(tm))

**

RESTRUCTURING: THE ARRL ON THE ARRL RESTRUCTURING PROPOSAL

The ARRL is now explaining why it has decided to ask the FCC to restructure the United States Amateur Radio Service, and the words are coming straight from the top. Amateur Radio Newsline’s Mark Abramowicz, NT3V, caught up with ARRL President Jim Haynie, W5JBP, by phone and got some insight into why the ARRL Board acted as it did :

--
With the American Radio Relay League's imminent filing with the FCC of its proposal for a new, no-code HF entry level license, the debate is certain to heat up.

ARRL President Jim Haynie W5JBP acknowledges the league's proposal will generate some controversy. But he says months of research, surveys and lots of internal debate went into crafting the revival of a Novice-class license.

Yes, Haynie confides, the ARRL's directors and Haynie himself were pressing the flesh - so to speak - for months gathering input from the amateur community. Directors also were conducting informal surveys among ARRL members. And, he says, a professional research company was hired by the league to survey hams about the state of the hobby.

Haynie says the research company's findings were pretty sobering and bolstered the ARRL board's drive for license reform.

"For example, 53 percent, if my memory serves me correct, today of all amateurs now are 55 years or older," Haynie says. "And this is growing at an exponential rate, it's not linear. And this is a very disturbing thought."

He says the results also revealed something the ARRL suspected for some time.

"There's people getting licenses and they're getting involved in what we call, or what I call '2-meter ghettos' and they have no place else to go so they lose

interest after about a year or six months or whatever," Haynie explains. "So you've got 200,000 or 300,000 Technician licenses out there who say 'I've tried' and they did and they didn't like it."

Haynie says it became clear one way to recapture the magic of the hobby lay in the experiences many long-time hams had when they first entered amateur radio.

"We went back and thought about, okay, how did it used to work and what was successful about it? And the old Novice class license was extremely successful, I think. And, we said, 'Well, okay then we have to go back to some form of that.' "

Last year's World Radiocommuncations Conference laid the ground work for countries to decide for themselves what to do about CW and licensing. But Haynie says the WRC '03 decision played a small role in the ARRL's deliberations.

"Morse Code is certainly tradition, I don't deny that," Haynie says. "And I think it's a neat ability. It's a skill. It has nothing to do with intelligence."

Haynie says he and other directors have heard some argue: 'Hey, I had to pass a code test, why shouldn't everyone else.' Haynie says that's like saying I'd like to play golf like Tiger Woods and coming to the realization that's probably not going to happen because you simply don't possess the skills - even with lots of practice. The same logic, he says, applies to CW. For many hams, he says, it's simply not their bag.

Haynie says the ARRL's proposal preserves CW for one license class, yet opens the doors to the world of HF for those who couldn't learn and master Morse Code to pass even a 5-words-per-minute test.

"People, they realize, they've come to grips: We are getting older. And we're not getting the people into Amateur Radio," Haynie says.

"And the amateur community realizes that we've gotta do something. And, I don't say that the league's proposal is perfect. Neither does any of the directors or officers of the league say that. But it was the best that we could come up with that still preserved the Morse Code tradition for the Extra class exam, and yet, gave you the taste of the old Novice that I used to have 30-something years ago."

Haynie says he's confident, based on his experience with the FCC, that the agency will look favorably on the ARRL license proposal.

"I have a gut feeling that they will take a majority of it, at least I think they will. They'll probably fine tune it, they'll tweak it some because that's typical of the federal government," Haynie says.

"But on the other hand, I know, I know that they want to simplify the Amateur Radio Service. They want three classes of licenses. They want to reduce their workload and continue to do what they like to do and amateur radio take care of itself."

And how long does Haynie think it will take the FCC to act and make any changes to the Amateur Radio license structure? He says don't expect a decision anytime soon.

"I don't see anything happening on any of the petitions, including the league's, probably 'til late 2005," Haynie concludes.

Haynie says his e-mail and phone have been busy since the board's vote two weeks ago. He says he's comfortable with the license proposal and is prepared to support and defend it.

Haynie says he had the chance to do so earlier this week before his hometown radio club in Garland, Texas. He says after explaining the league's rationale to the group, those willing to listen asked lots of questions. Haynie says he felt by the time it was over, many appreciated the league's work on behalf of the hobby.

Haynie's next stop: The 44th Tropical Hamboree in Miami on February 7 where he's expecting to get lots of feedback.

For the Amateur Radio Newsline, I'm Mark Abramowicz NT3V in Philadelphia.

--

If all went as expected, the ARRL was to transmit its proposal to the FCC on Wednesday, January 28th. And less we forget, a word of congratulations to Jim Haynie on his election to a third term leading the United States only recognized Amateur Radio society. The ARRL Letter Board of Directors expressed its confidence in W5JBP’s leadership on January 16 with a unanimous vote for his him to continue as President. (ARNewsline(tm))

THE BPL FIGHT: AUSTRIAN BPL PROVIDER SUING HAMS OVER NEWS STORY

In what looks to be a case of “he said -- no -- he said,” a row is brewing over the introduction of Broadband over Powerline telecommunications in the city of Linz, Austria. One that has a service provider taking that nations Amateur Radio society to court over statements quoted in the media world-wide.

As reported a few weeks ago, stories were circulating that PLT, or Power Line Telecommunications as the Europeans call their BPL system, had been halted in Linz. This, due to interference caused by the system. Also that the Austrian government had enjoined the service provider and the system would never be permitted.

Not true says the BPL provider and the power company and its now headed to court to try to stop the hams from complaining to them and to the press. From across the Atlantic, Jeramy Boot, G4NJH, has more:

--

The Austrian national amateur radio society, OeVSV, has objected to the use of PLT in Linz, stating that it causes interference to amateur stations, and issuing a press release which was picked up by the Austrian mass media. It appears that the OeVSV was misquoted as saying that the Austrian ministry had taken out an injunction against the PLT providers and that the service had been closed down for good in Linz.

The management of Speed-Web Consulting and Linz AG, who are responsible for the PLT transmissions, are disclaiming what they say are "press attacks by Austrian radio amateurs". They say that there has not been any injunction against them and the roll-out of PLT continues.

Speed-Web and Linz AG say that Austrian radio amateurs are doing their best to stop PLT "by filing undue interference complaints". They go on to say that "if there should be any actual, harmful and officially proven interference case caused by Powerline Communications, mitigation measures will solve this very case at that specific location in the concerned frequency".

On the 14th of January, Linz AG stated that it would be suing the OeVSV, as well as its president personally, over this matter.

Jeramy Boot, G4NJH.

--

The decision of Linz A G to sue the ham radio operators over the story of BPL says that in this one, big business is willing to go the whole nine yards. (GB2RS)

**

THE BPL FIGHT: FCC'S ABERNATHY ACKNOWLEDGES AMATEUR RADIO BPL CONCERNS

Here at home, FCC Commissioner Kathleen Q. Abernathy is apparently shifting away from her definition of BPL as a "Broadband Nirvana.” Last week Abernathy specifically cited Amateur Radio concerns about the interference potential of Broadband Over Power Line in remarks she delivered to the Catholic University of America's Columbus School of Law.

According to the ARRL Letter, Abernathy said BPL should not be widely deployed before dealing with ham radio's interference fears. She admitted that she now recognizes that Amateur Radio licensees have raised concerns about the potential for harmful interference. Abernathy described this as something that will have to be addressed before any mass market deployment can occur.

Commissioner Abernathy made her remarks on January 22 at the school's Washington, DC campus. Abernathy said that if engineers can find a way to prevent harmful interference to other radio services, BPL would represent a tremendous advance for consumers, because it could bring broadband to any home

that has electric power delivery. (ARRL)

**

RADIO LAW: CONGRESS MAY RAISE INDECENCY AND OBSCENITY FINES

Using obscene and indecent language on the airwaves may soon get very expensive. This as congress considers raising the stakes for those who insist on talking dirty on the radio. Amateur Radio Newsline’s Bill Pasternak, WA6ITF, has the details:

--
United States Representative Fred Upton of Michigan introduced congressional legislation to upthe maximum fine for an indecent broadcast from $27,500 to $275,000. Under the Upton sponsored measure the maximum fine for a continuing violation would be raised from $300,000 to $3 million.

Upton had also scheduled hearings to review the FCC's indecency enforcement policies for January 28th. Ken Johnson, a spokesman for Representative Billy Tauzin of Louisiana is quoted as saying that law makers intend to move the legislation quickly in hopes of sending a signal to broadcasters that enough is enough.

This action comes following recent complaints by FCC Chairman Michael Powell. He says that the existing penalty cap on indecency fines was too low to discourage off-color broadcasts.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF

--

Commissioner Powell believes that once broadcasters start to feel the pinch where in their wallets they will start to think twice about transmitting indecency on the airwaves. (Published news reports)

**

ENFORCEMENT: UPS TO THE FCC: YOU HAVE OUR FULL COOPERATION

The FCC has received a letter from United Parcel Service offering the company’s full cooperation in removing any unlicensed radio equipment from its nationwide fleet. This follows a January 7th letter to the Middlesburg Ohio office of U-P-S detailing unlicensed 10 meter operations coming from delivery vehicles in that area.

The FCC also has contacted another trucking company, R and L Transfer of Norwalk Ohio regarding the same type of problem. Unlicensed operators coming to the 10 meter band has been a growing problem around the world in recent years. (FCC)

**

ENFORCEMENT: THAT RADAR IS A NO-NO

The FCC has also written to a pair of hams in the Winfield and Haysville Kansas area. This, regarding a reported piece of marine radar equipment mounted in a land based vehicle. According to the FCC the radar unit was being used for storm spotting without being licensed for this use. The identities of those using the radar system were not revealed. (FCC)

**

HAMFESTS AND CONVENTIONS: OKLAHOMA IN MARCH

Turning to the social scene, the Green Country Hamfest and ARRL Oklahoma Section Convention is slated for Friday and Saturday, March 19th and 20th at the Claremore Exposition Center in Claremore Oklahome. Claremore is not far from Tulsa, and the event will feature free parking, loads of vendors, on-site ham radio exams, numerous forum sessions along with some truly nifty prizes. More information is on the web at www.greencountryhamfest.com (KC5FM)

**

HAMFESTS AND CONVENTIONS: FIRE CANT STOP THE DIXIFEST IN MEMPHIS

Despite a fire that destroyed its normal venue, Dixiefest 2004 in Memphis Tennessee will happen the weekend of February 14 and 15. Planners were able to find a new home at the Mid-South Fairgrounds' Pipkin Building. This is only a proverbial stones-throw from the Shelby County Building which was destroyed in the December 2003 blaze. More information about this premiere event can be found on-line. Just take your web browser to www.dixifest.org and take a peek. (Via e-mail)

OUR GOLDEN PAST: CARL & JERRY "LIVE" AGAIN

Its time for a trip back to the 1950's. To a kinder and gentler Amateur Radio. Our tour guide for this journey is Bruce Tennant, K6PZW:

--]

Remember the names Carl and Jerry? Well if you were playing with ham radio in the 1950's and 1960's you are well aware that these are the first names of the two fictitious teenage electronic whizze's. Characters created by the late John T. Frye, W9EGV, for his long-running magazine series of the same name.

The Carl and Jerry stories appeared in Popular Electronics from October 1954 through December 1964. They told of the adventures of two perennial teenage boys who shared a special bond because of their shared love of music, electronics and radio. Now, many of these stories are again available to read to enjoy thanks to a new spot on the world-wide-web. Better yet, they are the kind of stuff you may want to read to your grandkids, especially if they have the same wonderment as you when you were their age.

Where are they and how do you these Pop Com classics? Thats easy. Just follow to link you will find in this weeks print edition of this Amateur Radio Newsline report. And good news for our sight impaired listeners. Word is that the print works well with most devices to help the blind to read as well.

Traveling back in time for the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, enjoying the past.

--

So far there are only 21 of the stories in the seriers on the web, but enough to keep you glued to your computer screen for several hours. They are there to read at http://home.gwi.net/~jdebell/pe/cj/cnjindex.htm (ARNewsline(tm))
**

INTERNATIONAL - IARU: NEW IARU REGION 2 ARDF WEBSITE

Back to the present and word that Region II of the International Amateur Radio Union now has web site to serve as the voice of its Amateur Radio Direction Finding Working Group. The site provide links to official rules and regional results along with contact information for A-R-D-F groups and individuals throughout the Region.

Plans call for the site to be in four languages that include English, Spanish, French, and Portuguese. If you have any comments or wish to volunteer with the translations, please contact Dale Hunt, WB6BYU or Ken Harker ,WM5R. Their respective e-mails are wb6byu@arrl.net and wm5r@arrl.net. The website can be found at www.ardf-r2.org (Press release)

**

INTERNATIONAL - UNITED KINGDOM: OFCOM NEW TELECOM REGULATOR

From the international wire, word that Ofcom is name of the new regulator of Amateur Radio in the United Kingdom. The agency also holds responsibility for control other services that include broadcast television, radio, and numerous wireless communications services. More about Ofcom is on-line www.ofcom.org.uk (GB2RS)

**

INTERNATIONAL - VK: AN AUSTRALIAN LICENSE IS REQUIRED

A note to those of you who intend to operate from Australia on an extended visit. It appears that many amateurs, including those operating maritime mobile from within Australia's territorial waters, are using their own callsign with the 'stroke VK' suffix. Under Australian telecommunications law, this is

not permitted for any lengthy stay. Once past the grace period, all radio amateurs operating from Australia, and more importantly, from Australia's territorial waters must obtain an Australian license and individual VK callsign from the Australian Communications Authority. If you don't you will be told to go off the air. (Q-News, RSGB)

**

INTRUDER WATCH: HARMONICS BOTHER 20 METERS

An unidentified broadcaster on 14.280 MHz, has been identified as a harmonic of a Radio Liberty. The transmitter in question operates on 4.760 MHz and it's the 3rd harmonic that been heard in V-K-Land.

Meantime, another intruder on 14.320 MHz has been found to be Radio Uzbeckistan. This time it's the 2nd harmonic of a transmitter on 7.160 that's responsible for what's being heard. (Q-News)

**

WITH THE ARRL: MAJOR CHANGE IN DXCC POLICY ANNOUNCED

A major change in the criteria for determining what is a new DXCC entity. An ARRL news release says that the organizations Board of Directors has removed the guideline that provides for an entity to be added to the DXCC list if it has a separate International Amateur Radio Union member society. The ARRL says that this provision had the unintended consequence of bringing in applications for IARU membership that do not further the objectives of the organization. In fact, all it has done is to create what ARRL terms as an unfortunate and unnecessary administrative burden for the IARU. (ARRL)

**

DX

In DX, Dwayne Barbee KE4RVT is the latest ham on the air from war-torn Iraq. Q-R-Zed dot com reports that Barbee received his Amateur radio license from the Ministry of Communication on January 25th. He has been assigned YI9RVT and will be operating SSB and CW on all bands for the next 12 to 18 months from the city of Al Kut. (qrz.com)

And word that SM5DIC was scheduled to return to the Democratic Republic of Congo on the 20th of January. He will be there for two months and will operate the club call 9QZ0AR in his spare time. (GB2RS)

Also, AA1M and W1USN will be active as J3 stroke their home calls from Grenada to the 6th of February. They will operate CW, SSB and some PSK on the High Frequency bands. For all of these operations, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: RADIO FROM SPACE - THE SETI INSTITUTE IS MONITORING

Lastly this week, scientists searching the stars for aliens are convinced an E.T. is out there -- it's just that they haven't had the know-how to detect such a being. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--
Science Online says that technological advances have opened the way for scientists to check millions of previously unknown star systems, dramatically increasing the chances of finding intelligent life in outer space in the next 25 years.

The article quotes Seth Shostak. Shostak is the senior astronomer at California's non-profit Search for Extraterrestrial Intelligence Institute says that it is like looking for needles in the haystack that is our galaxy, but there could be thousands of needles out there. But on a recent visit to Australia to attend a conference on extraterrestrial research, Shostak said detecting alien life is only the start.

Since it was founded in 1984, the SETI Institute has monitored radio signals, hoping to pick up a transmission from outer space. Its Project Phoenix conducts two annual three-week sessions on a radio telescope at Arecibo, Puerto Rico. Project Phoenix, is the privately funded successor to an original NASA program that searched the heavens for signals from extra-terrestrial beings. That program was canceled in 1993 amid much skepticism in the Congress regarding the possibility of life in outer space.

For the Amateur Radio Newsline. I’m Norm Seeley, KI7UP

--

But Science Online says that the search has been slow. About 500 of 1,000 targeted stars have been examined and no extraterrestrial transmissions have been heard. (ScienceOnLine)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up close to a dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved. Now please stand by for a special

mesaage regarding Amateur Radio Newsline's current financial situation from Andy Jarema, N6TCQ. It following this 5 second pause.

--
5 sec pause
--

This is Andy Jarema, N6TCQ, Chief Financial Officer of the not-for-profit organization you know as the Amateur Radio Newsline. And once again, I am using the single word -- HELP! If you value this service, please help. We try to keep these kind of thing as subtle as we can.

You responded so wonderfully to our plea last April, and we haven't really asked for anything
since. But, unfortunately, your response dwindled in the waning months. The expenses of bringing you the up-to-date news on Amateur Radio did not.

We'd really like to hear from you. And we'd really like to hear from the repeater clubs out
there. These are the wonderful folks who re-transmit our broadcasts, bringing your nets increased value, and giving your members the latest in Amateur Radio news and information to enhance their hobby.

But Amateur Radio Newsline cannot continue without the funding needed to pay the monthly bills. And right now, we can't.

In the quarter century that it has existed, no one at the Amateur Radio Newsline has ever taken a salary. We all volunteer our time and talents. But what we ARE faced with are monthly expenses for gathering and delivering the news to YOU! We are talking telephone, Internet access and the like. This has not changed.

The bottom line is this: I'm asking that you try to find it within your organization or yourself as an amateur to continue this service. As we've said before, whether Amateur Radio Newsline continues to provide this service or if it disappears is totally your decision. We're here to serve
you for as long as you want us. Your response over the next several weeks will provide the answer.

The address for the Amateur Radio Newsline is Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you REALLY soon, I'm Andy Jarema, N-6-Tiny California Quake.

I don't see the point of code being a requirement these days, but I don't see the "no code" licensing the only reason for all the wackos being on the HAM band. Good HAM's totally outnumber bad HAM's, the majority of HAM's I've listened too are good users of the bands. There has been always wackos and crackpots on the radio, and then you have your old-school HAM's who passed all those code tests back in the day and still act like kooks. I've certainily heard them on there.

It's the responsibility factor, not much of this exists these days, especially when times change, your going to have more increasing numbers of kooks no matter if the code is eliminated or not.

For implementation sometime AFTER the "code issue" is resolved:

(1) Amateur Basic.

Forty question test with access to 144mHz, 50Mhz, 28mHz, 21mHz, 18mHz, 7mHz and 1.8mHz. Same phone allocations as other licensees on HF bands. Morse Code endorsement required for operation in lower 100kHz of any band. Limit 100 watts output on any band.

(2) Amateur Advanced.

Additional written examination. All presently HF-licensed Amateurs except Extras grandfathered to new license. Privileges same as for former Advanced Class. Morse Code endorsement required for operation in lower 100kHz of any band EXCEPT for those previously code tested or already holding an Element 1 CSCE. New licensees (not grandfathered operators) limit to 500 watts on any band.

(3) Amateur Radio-God Expert for Life

(OK...that was for Lennie's benefit...>>I'D<< call it Amateur Extra) Comprehensive closed-pool written test. REQUIRED 5wpm Morse Code test. Full Amateur allocations and privileges. Additional phone allocations (or "wideband", if you prefer non-mode specific classifications) from previous Novice class bands. Full power.

Why?

Why not...?!?!

After reassessing the idea in these terms, I stand corrected.

I have changed my mind. This DOES make more sense.

> > I have 52 DXCC entities on 75m phone and 87 on CW. I have 85 DXCC

Tain't nuttin...My best friend (K4YJ) has numerous single-band
DXCC, WAZ, 5BWAZ, etc, with nothing mroe than the driven element of an
old butterfly beam in the attic of his townhouse in suburban Atlanta.
I thought I was doing pretty good till the shoeboxes full of QSL's at
his shack fell on me! =)

And that's all they're likely to say, unless there is a proposal
put forth that makes it more efficient to do so.

My idea for 60 meters?

Limit ALL Amateur access to this band to persons participating in
ARES, RACES or other RECOGNIZED emergency service organization or
agency. This would include drills and nets of both Amateur and
non-Amateur organizations for practice purposes.

Takes steps to enact NTIA regulation changes to make this the
defacto liasion band between disaster relief agencies, both civil and
military.

They have?

Hmmmm...I turned the radio on just as soon as I read this and
heard TONS of signals on HF and the local repeaters.

Local guys chatting about new license class just completed...

HF rocking with DX CW and SSB signals.

> The ARRL has abandoned the traditional Ham Radio (this is a matter of
> survival on their part, they know the turn Ham Radio has taken and will

And if they ONLY catered to "traditional" Ham Radio, what then?
They'd be catering to an ever-dwindling fraction of the Amateur Radio
community and THAT would be the death of their jobs!

It's just one try at it. There are other ways.

For example, listen to people talk sometime and notice how many pauses most people insert in their speech. Some folks' speech is full of umms and ahhs because they are mentally trying to "hold the VOX". (I'm not making this up - listen to *how* people speak, rather than what they are saying, and note how the odd patterns!)

Suppose that before modulation the digitized signal compressed the pauses and on the receive end they were expanded. Or maybe left out if they were over a certain length. The digital signal could be sent at a slower pace and yet catch up during the pauses.

Maybe simply trade bandwidth for speech rate. You stop talking and the rig takes a few seconds to finish sending - no problem!

Point is, a lot of experimentation in this area is hampered or discouraged by the current rules. That's why folks like Hans and I commented *against* ARRL's "novice refarming" proposal some time back, saying the kHz would be better reused as a digital sandbox rather than simply more SSB space.

So how are you going to converse with another Morse station, assuming
you are in the CW portion of the band, if you don't send? Reread the
post, it was talking about sending.

Skilled operators, IOW.

The early hams had to be technically oriented, because the equipment of the time demanded it. A ham who knew what s/he was doing could work the world with arelatively simple station, while a ham who didn't couldn't hear a station in the next town.

Of course, much of the development of electronics since those times has been aimed at reducing and eliminating the need for "users" to have technical knowledge and/or operator skill. Amateur radio is one of the few places where such things are considered important. Indeed, the whole concept of "radio operator" has largely disappeared outside amateur radio.

Exactly. What might be created would resemble MURS or FRS, with lots of restrictions and requirements, and very little of the freedom we take for granted.

Careful Jim!! One of the arguments against Morse testing is that
outside groups do not use Morse code any more, so it isn't needed. Since
outside groups don't use "trained radio operators" any more, this is one
more reason not to test for anything.

Carl will be very upset you put *this* idea in people minds too! ;^)

Why no 80, 30, 20, or 12 meters? Why not allow 222 in hopes of increasing
use of the band?

> Same phone allocations as other licensees on HF bands.

You mean same as Extras have now?

> Morse Code endorsement required for opera-
> tion in lower 100kHz of any band.

Bad idea. Acts as a disincentive to use CW and digital modes, and as an
incentive to use voice only!

I have no idea why you bother with him, Steve.

> Comprehensive closed-pool written test.

How? "Son Of Bash" would make it open pool quickly. Plus, how can you make a
case that only the top ticket gets a closed pool but open is OK for the others?

> REQUIRED 5wpm Morse Code

Snip to...

> Steve, other than one license class too many, and no term limit on
> "basic," sounds reasonable.

Thanks, but what's the problem with an "rf hazard study"...?!?!
Everyone acts as though this is going to require a Master's degree to
accomplish. I don't see why any reasoable nudge towards anything
having to do with safety is an imposition...Other than it might
REQUIRE some acutal exercising of the grey matter, I think ALL classes
should have to do it at some point in time.

Agreed, but then there are folks who are still insisting on a
second shooter on the Grassy Knoll. You can't please everyone!

> > (1) Amateur Basic.
> >
> > Forty question test with access to 144mHz, 50Mhz, 28mHz, 21mHz,
> > 18mHz, 7mHz and 1.8mHz.
>
> Why no 80, 30, 20, or 12 meters? Why not allow 222 in hopes of increasing
> use of the band?

80: Perhaps 80.

30: Let's leave this for folks who WANT to beep and for those
elusive
data modes.

20: This is where everyone wants to go and play...Let them get
their feet
wet on 17 and 15 meters...then they can come play with the
Big Boys.

12: If you're going to draw limitations on bands you have to
draw the
line somewhere.

1.25: I think this band is fodder, Jim. I realize that the metro
areas
(ie: NYC, LA, ATL, etc...) make better use of it, but we've
done
everything except beg the Pope to support the band. We can
give it
a shot, but the history of this band is that it won't
"sell".

OK...Bottom 50kHz...?!?!

> >Limit 100 watts output on any band.
>
> Requires RF exposure eval on higher bands. Why not 100/25?

It rrequires an eval >>IF<< you're using that much power.

As I asked "Billy Beeper", why is everyone running away from
trying to make sure we are as safe as we can be? Isn't this a part of
the "learning curve"...?!?!

> > (2) Amateur Advanced.
> >
> > Additional written examination.

> OK
>
> > All presently HF-licensed
> > Amateurs except Extras grandfathered to new license.
>
> Even Novices and Techs? That's a worse giveaway than ARRL proposes!

It's one-time and it's over.

If current expiration of Novices and Techs are any indicator,
most of those folks won't be taking advantage of it anyway.

> > Privileges
> > same as for former Advanced Class. Morse Code endorsement required

It's like swinging at a pinata...One guy makes a fool out of
himself while everyone else gets to laugh at the process!

> > Comprehensive closed-pool written test.
>
> How? "Son Of Bash" would make it open pool quickly. Plus, how can you make a
> case that only the top ticket gets a closed pool but open is OK for the others?

Because this would be the "final exam". If someone is truly
worthy of having "the whole enchilada", then they should be able to
prove it.

And as for the "Bash" syndrome, I suggest a new line in Part 97:
"Test Confidentiality: Except for those test items released by the
VEC as approved by the Commission, it shall be a violation of this
Part to reveal content of any examination prepared for any Amateur
Radio operator examination."

> > REQUIRED 5wpm Morse Code

Let's be wildly optimistic and say the proposal results in 40,000 newcomers per year. Let's also say that each year 30,000 (about 4%) of those licensed today drop out.

Then in six years we'll have 60,000 more hams than today - about 744,000. Of these, 240,000 will have joined in the intervening 6 years. That's about 30% - but *only* if none of the newcomers comes in as anything but a Novice, and *only* if not one of them upgrades!

Very good point, Steve! If we have to learn about RF safety, we might
as well use it. I would want ANY amateur at ANY license level to be
capable of doing an RF safety evaluation. To not have such a thing is to
me criminal negligence!

Never going to happen; this would require a FCC exemption from the Freedom
of Information Act.

The FAA has such an exemption and still publishes all the questions and
answers for FAA tests.

Of course there are those that seem to think an amateur extra license is
of greater importance than an airline transport pilot certificate and an
instrument rating.

Interesting story and obviously a very bright kid! Homeschooled, too.
The story documents other young hams, including the Philly area's W3OVV,
who earned her Class B at the Philly FCC office soon after her 10th birthday -
in 1948. This was back in the days when *all* US ham licenses required 13 wpm
code, sending and receiving, and when the writtens were not only "secret" but
also consisted in large part of essay and draw-a-diagram questions.

One interesting side note is that these young hams are almost all girls!

Then why have classes?

Ahem, The Amateur Formerly Known as Rev. Jim, we've had that very same
or greater disincentive since 1912.

Why is it NOW a problem?

You once told me when we had 7 license class distinctions that we
needed more classes.

Why the change now?

Nope. Just an exam. Want to replace it with a stand alone exam on
rules and regs? Amateur history?

And the mode still exists and can even be used on all amateur
allocations ('cept a little bit of 220).

1958. New Article: A BANDWIDTH-BASED Frequency Plan

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-01 01:52:24 UTC
From: expeditionradio@aol.com
Message-ID: <20040131205224.20606.00000708@mb-m21.aol.com>
Source record: 86634

An updated version of the entire article "A Bandwidth-Based Frequency Plan", is no available on the web at:

http://www.qsl.net/kq6xa/freqplan/

Please refer to the new updated color chart of the frequency plan.

It equitably distributes the space within the allocated band so that approximately the same number of narrowband 500Hz signals vs wider bandwidth signals can share the precious spectrum resources. Keep in mind that the plan is mode-neutral. If you can use technology to shoehorn a voice into 500Hz, then you can transmit it anywhere in the band. You may laugh, but my experience working with commercial DSP digital modulation systems proves to me that it can happen in Amateur Radio.

In our present mode-based system in USA, we have a lot of nearly-dormant band segments. When the number of HF operators doubles overnight, we will no longer have the luxury to waste spectrum as we have in the past.

I would like to thank everyone who has contributed with suggestions and constructive criticism during the development of the plan.

The article and band chart is now on the web at:
http://www.qsl.net/kq6xa/freqplan/

Did that. For one your "30M bandplan" would require both ITU and FCC
approval to implement. Good luck with that one Bonnie.

IF the FCC buys into anything like the recent ARRL proposal AND
drops anything vaguely resembling that proposal on Hamdom USA MAYBE
the number of individuals licensed to actually get on HF MIGHT double.
All of which is pure conjecture right there and is a real stretch at
best.

What is not conjecture is the fact that there is no statistical
evidence which indicates that simply having a license to operate HF
somehow equates to those with any new "giveaway" HF ticket actually
putting together HF stations and getting 'em on the air on a 1:1 new
license privs/band occupancy ratio.

Quite the opposite is being demonstrated in fact. We already have tons
of experience with, for example, the recent huge increase in the
number of Extra Class licensees which fell out of the reduction in the
code test speed for Extras.

I tune the Extra 75/40/20M phone setasides today and the recently
enfranchised don't seem to be there. In volume. If anything the
overall activity level in those setasides is noticeably down from what
it was long before the code test speed was dropped.

> we will no longer
> have the luxury to waste spectrum as we have in the past.

The problem with HF ham radio, if there really is a problem, has
nothing to do with whimsical "bandplans" like yours, "we need space .
. sombody might eventually do some 10Khz wide digital voice modes" or
any of the rest of it. The dead spectrum problem has far more to do
with getting the HF-enabled of all flavors off the Internet, off their
dead butts, geting the radios, actually putting the HF antennas up and
getting on the air than it does with any "bandwidth-based frequency
plan" sorts of things.

> I would like to thank everyone who has contributed with suggestions and
> constructive criticism during the development of the plan.

. . . no problem, you're welcome . .

HAW! That's a good one! And it makes the point perfectly.

On a completely different note, here's proof that even USAF levels of training, testing, evaluation, leadership and review can't stop all operator errors. Experienced pilot had a history of hotdog behavior, and may have tried to roll a BUFF:

IOW the 'phone bands are drastically widened and the CW/digital bands
drastically narrowed. Also, the incentives to upgrade are reduced, the
spectrum available for modes wider than SSB is reduced.

>Keep in mind that the plan is mode-neutral.

No, it isn't.

Of course it can. But will it? If the 'phone bands are as drastically widened
as
proposed, why should anyone bother with 500 Hz processed voice when they
have so much room for regular SSB?
>>
>> In our present mode-based system in USA, we have a lot of nearly-dormant

More like wildly optimistic.

We currently have about 324,000 US hams with General, Advanced or Extra class licenses. Also at least 130,000 with Novice, TechPlus and "Tech-with-HF" licenses. If even a small percentage of them were on HF at any one time, the bands would be full to busting.

>What is not conjecture is the fact that there is no statistical

When was spectrum ever "wasted"? Is that why AM is so restricted in this plan?

HEAR HEAR

And *THAT'S* where the problem really is! Fiddling with licenses is only going to have a minor effect on that, if any. License changes aren't going to fix anybody's CC&Rs, or suddenly improve the sunspot number, or empower vast numbers of existing hams to figure out how to end feed a wire and actually get on the air.

I am a Pilot, Jim, and don't think so...But we're discussing
AMATEUR RADIO in this forum, not FAA ratings and testing policies.

My position is that we are not going to completely (or even
remotely) get the degree of "training" the FCC sets before us with
open pools. We have far too many "Extra's" who can't calculate the
length of a dipole or know the difference between peak-envelope-power
and PeeWee Herman. That's a shame.

And if it were up to me, the FAA pools WOULD be closed. I can
tolerate the idea of a 71% correct Amateur Extra, but I'd rather not
think about a 71% correct ATP droning around with a load full of pax
and wx at minimums that made that 71% from a verbatim Q&A manual!

>>>That's one. There are others:
>>
>>>- Allowing a free upgrade

>*can be taken as*

>>>proof that the material in the test which is not
>>>taken is not necessary for the privileges.
>>
>>To quote from the ARRL's FAQ on their proposal:
>>
>>http://www.arrl.org/news/restructuring2/faq.html
>>
>>"The fact is that the examination bar has never been at a uniform height
>>over ham radio's nearly 100-year history."

>And I say: "So what? The question is whether there is any good reason to
>give almost 60% of existing hams a free upgrade to the next license class,
>even though the upgrade to that class requires only a written test from a
>published pool.
>
>>Were you also opposed to giving pre-1917 hams a waiver for the 20 WPM
>>code test?

>No such waiver ever existed. What *was* waived were the 20 wpm receiving and
>sending code tests, plus the Extra written test. The person who got the waiver
>had to hold at least a General license, too.

Now you're being pedantic. I was describing a subset of the waiver given, enough for the purpose of the argument. You described the entire waiver. Both are correct, and neither contradicts my arguments.

>That was long before my time, too. And it affected maybe 2% of the licensed
>hams at the time.

So you might accept grandfathering, if it occurred at some asymptotic point in the past, and only affected a small minority of hams? What percentage would be a threshold? You say that it is wrong to grandfather 60% of all hams, but you might be willing to accept grandfathering of 2% of all hams. What about a proposal that grandfathers some percentage of hams in-between? What would be your greater objection, grandfathering all of the Techs, or grandfathering all of the Advanced?

Remember that at some time in the future, we may be looking on this grandfathering as occurring at some asymptotic point in the past, as with the pre-1917 waiver above. You ask below what is the long-term plan. I say one aspect of the plan is to be able to look back on this grandfathering in the same way that we look upon the pre-1917 waiver.

>>>- Amateurs who miss the one time upgrade have to take more tests than those
>>>who didn't. How do we justify that?
>>
>>It's called "grandfathering," which is done in more regulatory contexts
>>than can possibly be named here. Due to the need for certainty in the
>>law, it is nearly always based on hard cutoff dates. Technologies,
>>practices, and people change over the very long timeline that laws and
>>regulations are required to cover. It is not possible to predict the
>>future with certainty, so laws and regulations must change to reflect
>>current knowledge. It is also impractical for society to retest,
>>recertify, or revalidate every existing entity against current
>>requirements.

>None of which is proposed.

But when considering alternatives, one really has to identify all implicit alternatives, and argue for or against them (avoiding the logical pitfall of false dichotomies, trichotomies, etc.). The status quo, which you have advocated, and might be labeled alternative #4 based on your exchange with Bill Sohl, is one such implicit alternative. I would argue against that, for the reasons I have given previously (streamlining of license classes, streamlining of band plans, reduction of regulatory burden, reduction in confusion for amateurs and the FCC, harmonization with the deletion of S25.5 and with other countries' regulations, etc.).

If license classes are consolidated to a smaller number, one alternative is simply to grandfather existing hams, which the ARRL has advocated.

One other implicit alternative (say, #5), is to make every Novice, Advanced (and possibly non-Plus, or would that be non-Plussed, Tech) come back in to take written tests to upgrade to the next level, or otherwise lose privileges. I would argue against that also, for the reasons I have also given previously (it is impractical to retest everyone, and such existing hams are a large, stable user base such as that in the definition of grandfathering below).

>>
>>The web site for Malvern Instrumentation gives a good definition of
>>grandfathering in a technical context:
>>
>>"Grandfathering is the practice of claiming exemption of older systems
>>from validation regulations and requirements on the basis that these
>>systems have proved their reliability by adoption for a long period of
>>time by a large user base."
>>
>>Grandfathering in the context of ham radio recognizes that existing hams
>>have not only passed the tests in effect at the time, sometimes topics
>>not covered presently (Morse code, drawing circuit diagrams, etc.), but
>>have also gained experience beyond their initial exam topics. It is a
>>fair, and pragmatic, distinction between existing hams and entry-level
>>ones. Quoting again from the FAQ document:
>>
>>"Passing any amateur examination does not magically result in a good
>>operator. It's just the key to the kingdom, so to speak. Experience and
>>good mentoring create skillful and knowledgeable operators, not the
>>relative difficulty or ease of the test."

>I disagree with that assessment. YMMV.
>>
>>You might argue that not every existing ham has obtained the same degree
>>of experience, or even a minimum necessary level of experience to be
>>given a free upgrade. That would be true, but ultimately would be
>>self-limiting, as experience would correlate with participation. An
>>inactive ham using no privileges today would be using no more privileges
>>if the FCC gave him a free upgrade tomorrow. Free upgrades are not a
>>perfect solution, ideal in all cases, but are a good solution overall.

>I disagree. What's wrong with simply allowing Techs, Tech Pluses and Advanceds
>to upgrade in their own time?

>What is the sudden need to eliminate those license classes? The Novice and
>Advanced have been closed off to new issues for almost 4 years, and their
>numbers have declined. And from 1953 to 1967, no new Advanceds were issued. Did
>any of that cause problems?

>>>>refarm the Advanced phone bands.
>>
>>>Why does that have to be done at all?
>>
>>So, are you advocating not refarming the Advanced phone bands even
>>*after* the last Advanced class license expires? Yeah, that's a
>>semantic nit-pick over what you wrote above, but then so is "You mean
>>the BoD. I'm the ARRL too, remember?" that you wrote below.

>You're avoiding the question.

>Why do the Advanced class subbands have to be "refarmed" at all? Who or what
>would they be "refarmed" to? What's the longterm plan?
>>
>>If you do agree that the Advanced phone bands should be refarmed at some
>>point in the future, at what point would you have it done? Would you
>>leave it to Extras, give it to Generals, or would you otherwise split it
>>up in some way?

>Why does it need to be done at all? Is the Extra written that hard?

So you would argue that any refarming would be done at some asymptotic
point in the far future, indistinguishable at present between "decades"
and "never."

>>
>>>>Alternatively, avoids opening up the
>>>>Advanced class phone bands to General-class hams (an effective downgrade
>>>>in privileges for Advanced, and crowding out DX users with more
>>>>U.S. hams in those bands) or opening up the Extra class phone bands to
>>>>Advanced-class hams (which would be a "free upgrade" in all but name).
>>
>>>Again, why not just leave those subbands as they are now?
>>
>>In this day and age, regulatory agencies seem more eager to simplify
>>regulations. Removing regulations that are obsolete, or cover too small
>>an intended audience to be justified on a cost basis, is likely a top
>>priority for such agencies. Again, what is your timeline for change?
>>Decades in the future, or never?

>I don't see any reason to "refarm" them at all. Not at this time, anyway.

>Note that in 4 years, the number of Advanceds has dropped by only about 16%.
>Seems to be a pretty popular license even today.

>It sounds to me like you want all Advanceds to become Extras so that the
>Advanced subbands can become General bandspace. That's not part of the ARRL
>proposal, though.

No, I never said that. I would combine Advanced and Extra phone bands into just Extra phone bands, and leave the General bands as they are. That doesn't mean that I wouldn't support frequency shifting, such as that proposed to make 40 meters a primary amateur allocation, or part of Novice band refarming. Just that I would keep the proportional amounts roughly the same. I realize that the current ARRL proposal splits up the Advanced phone bands, giving proportionally more to the General than the Extra phone bands on 80 and 40 meters, and proportionally less on 15 meters (no changes on 20 meters). I do not strongly support that, but even that proposal isn't giving the entire Advanced phone bandwidth to the Generals.

>>>>Also avoids having to accommodate a license class (Tech Plus) that isn't
>>>>even carried in the FCC database anymore, which is a records/
>>>>enforcement problem for the FCC, and requires the licensee to keep
>>>>documentation forever.
>>
>>>If the current rules are left alone, all Tech Pluses will be Techs in six
>>>years, two months and 20 days or so.
>>
>>If by saying, "If the current rules are left alone..." you really meant
>>leaving alone everything *except* the 5 WPM Morse code requirement
>>(which would be eliminated for these General and below under the ARRL
>>proposal), then, and only then, Technician-class hams will assume the
>>HF privileges of Technician-Plus.

>Whatever. I don't see why the 5 wpm code test is such a big deal as a
>requirement.

Does your "Whatever" answer above mean that you support 5 WPM Morse code for all HF license classes, or just for Extra? If the former, then there is a very real distinction that will continue to exist in the license ladder whether or not it continues to be recorded in the database. If so, then the expiring of Tech-Plus license in 6 years is not a simplification, it is a complication.

>>That's still a long time in FCC
>>enforcement (and VEC administration) years.

>Why? It's been almost 4 years since the last restructuring took effect. Look at
>the enforcement letters - Techs without code masquerading as Tech Pluses isn't
>a
>big problem, from what I see.

You argue that it's not an enforcement problem because few or none have been caught. I would argue that it is an enforcement problem because it would be very hard to catch someone, especially if confirming who has what privileges requires documentation that is no longer in the FCC database, and might no longer be retained by hams or VEC's. The FCC's

limited staff time is probably being aimed at big fish, such as Advanced
and Extra-class scofflaws engaging in power and interference violations.

>>Even if you argue that FCC
>>action on further restructuring will take most of that six years anyway,
>>there are still all those Novice and Advanced class licenses that will
>>likely exist in the database for decades to come.

>It makes sense to grandfather existing Novices to the "NewNovice" (or whatever
>it is called). There are only about 32,000 Novices left now, down from just
>under 50,000 after restructuring.

>What *is* the problem with Advanceds just staying as they are? Have you not
>read from the Advanceds who say they *don't want* to become Extras?

Which is as much of an argument as "Have you not read from the hams who
say that they *don't want* to have ham radio examinations without Morse
code?"

>>
>>>Why not just give all the existing Techs, Tech Pluses and Novices the
>>>"NewNovice" privs, in addition to their existing privileges? The database
>>>doesn't need to change at all.
>>
>>Did you notice that Novices actually lose privileges? See the FAQ
>>document above for more details. In particular, power limits are
>>lowered from 200 Watts PEP to 100 Watts PEP on HF bands except for 10
>>meters, and 50 Watts PEP on 10 meters.

>Is that really much of a problem? How many Novices are on the air today running
>more than those power levels?

>> From the FAQ:
>>
>>"The reason behind the change in Novice power limits is to avoid having
>>to examine entry-level applicants about how to evaluate amateur stations
>>for RF safety. "
>>
>>I'm sure that you would argue that Technicians should retain their power
>>limits (1500 Watts PEP) on 6 meters and up, and I would agree, but what
>>about HF? Should Technicians lose privileges on those bands, by having
>>their power limits lowered (from 200 Watts PEP), or should there be
>>separate power limits for Novice and Technician on HF? This is starting
>>to get more complicated than before.

>Not at all! Where an existing ham has greater privs, those privs would be
>retained. This has been done with Tech Pluses for almost 4 years now. FCC
>proposed it and enacted it, btw. Why can't it be done for existing Novices and
>Techs?

So, again, as part of your status-quo alternative, you want to keep in
place the regulations and bandplans for six classes of license, only
five of which will be tracked in the FCC database six years from now.

>The 1998 proposal from ARRL Hq was for Tech Pluses and Novices to get a freebie
>to General - and FCC said no. What has changed that suddenly makes free
>upgrades a good idea?

The ARRL argues that this is now the second round of restructuring. The
FCC prefers to revisit things every few years, and do things in
manageable chunks. What is driving this second round is the lifting of
the S25.5 requirement, the eventual need (in the ARRL's opinion, and
mine) to address the shrinking pools of Novice and Advanced class
licenses, as well as the fact that there will be no distinction in the
FCC database between two classes of licenses with different privileges
(Tech and Tech Plus) in the very near future.

>>>>>>Rather, it is just one of
>>>>>>the unresolved loose ends that was deliberately not tied up until better
>>>>>>consensus emerged from the amateur radio community about things like
>>>>>>Novice band refarming, etc. The League official noted that the ARRL's
>>>>>>band refarming proposal, RM-10413, has been sitting on an FCC official's

>>the subject.

>Already have. In detail. More to come, too.

>>I will, too. For the record, I'm not in complete
>>agreement with the ARRL proposal, either. I don't see the regulatory
>>justification for the retention of 5 WPM Morse code for Extra,

>I do. Morse code is a big part of amateur radio, and having no code test at all
>simply denies the reality of that.

I'm sure that you will argue in more detail than "Morse code is a big part of ham radio, and having no code test simply denies the reality of that." You may also have to find new arguments beyond those that the FCC rejected in Docket WT 98-143, including yours.

>>and I
>>remain skeptical that a Novice license (even a restructured one) is
>>viable today.

>What we have now is a system that tends to funnel newcomers into VHF/UHF
>amateur radio, and manufactured equipment. And away from HF and homebrewing. A
>restructured Novice could change that.

Part of arguing for a new Novice license would involve identifying what has not worked with the present Novice license, and what changes would somehow "open the floodgates" with the proposed future one. You argue that most entry-level hams are being funneled to VHF/UHF. I might also argue that there are not very many entry-level hams at all, especially younger people, regardless of where they are being funneled. The youngest members in most clubs locally are well into their mid-30's. The presence of teenagers has all but evaporated.

What types of realistic homebrewing are you advocating for "NewNovice" hams beyond 3-transistor OOK transmitters and single-conversion receivers? Please be specific. What aspects of current communications technology, something that would be used and would not be a trophy or shop-project to be put on a shelf, can be realistically homebrewed via commercially-available (and presently-manufactured) parts by high-school age hams?

When you argue for "NewNovice" privileges, are you supporting it with 5 WPM code, or without? What if almost no one wants to sign up for 5 WPM code as an entry-level requirement?

> AMATEUR RADIO in this forum, not FAA ratings and testing policies.

The discussion was the the testing practices of an agency of the
US government.

Comparing the practices of another agency gives a reality check on
the possibility of closed question pools.

> My position is that we are not going to completely (or even
> remotely) get the degree of "training" the FCC sets before us with
> open pools. We have far too many "Extra's" who can't calculate the
> length of a dipole or know the difference between peak-envelope-power
> and PeeWee Herman. That's a shame.

I have mixed feelings on that.

I think the perception of the ignorance level is skewed for those that
spend a lot of time on USENET for the simple reason that those that do
know how to calculate the length of a dipole are not going to post
a message stating that.

Only the ignorant are going to post things like that and the posts
will stand out in your memory but you will never know how many read
that post and just thought to their self "how did that guy get a
license".

If such questions were answered simply and correctly, and perhaps some
references given as to where such things may be found (such as ARRL
publications) without the usual derisive comments, maybe a goodly
part of the training you hope for would take place.

I believe the term for such actions is "elmering" and at one time it
was a major part of the amateur training process.

The ignorance problem is hardly a new problem. I can remember being
at a ham gathering circa 1965 where a guy didn't know the difference
between a short and an open. To have had the license he had at that
time he would have had to take the old essay style tests complete
with diagrams.

A closed test pool is no panacea.

> And if it were up to me, the FAA pools WOULD be closed. I can
> tolerate the idea of a 71% correct Amateur Extra, but I'd rather not
> think about a 71% correct ATP droning around with a load full of pax
> and wx at minimums that made that 71% from a verbatim Q&A manual!

Those that memorize the tests tend to get scores closer to 100% than
to 70%.

For some insight on the testing process and question pool challenges
for the FAA, see http://www.avweb.com/news/columns/186574-1.html.

The discussion there is a mirror of this one.

And many of them will be perfectly content to remain Novices
"forever".

> Your bandplan only addresses HF. Ninety-nine percent of
> "emergency communications" takes place above 50mHz.

Amen. What little HF emergency-related ham comms actually do take
place are not emergency comms, they're post-disaster H&W comms.

> Nice try, Bonnie. You're thinking, and that's good, but the
> ultimate result was all you did was expand the phone bands on HF where
> very little "experimentation" is going on anyway.

There's virtually NO new-mode experimentation going on anywhere in any
ham bands. We have high bands where all sorts of "multimedia" wideband
ops are already quite legal. But all we hear is the talk, the walk
simply isn't happening. Why would it be any different on the HF
bands??

The concept of reshuffling the whole deck to "promote experimentation"
has been around for eons, it's a cyclic refrain which pops up every
few years and here's the current iteration.

The problem with "new modes" has nothing to do with the regs,
allowable bandwidths or any of the rest of the usual micro-managed
"grand plans". It's a MARKETING problem, pure and simple.

A pilot who screws up can do a lot more damage than a ham ever could.
I've been told
that small private planes)general aviation) are not permitted to fly
over Manhattan in NYC.
Because if your engine quits, there's no place to land it there. Not so
much over fear of
a 9/11 event. Some kid stole a Cesna and flew it into a skyscraper in
Atlanta IIRC.
Not much damage at all except taking out one office.

>
Why draw limitations on which HF bands newbies get? Give 'em a taste of many, and let 'em figure out which ones they like.

Remember that one of the prime limitations of many hams are when they can get
on the air, and what antennas they can put up. (Some can't even figure out how
to end feed a simple wire, but that's *their* problem). A wide selection of
bands
insures that there will be some options for almost everyone.

> 1.25: I think this band is fodder, Jim. I realize that the metro

>
> OK...Bottom 50kHz...?!?!

No.

Either the code test is part of the license exam, or it isn't. If it is, no
endorsement
needed. If it isn't, the solution is that the lower 20% or so of each band
should
be made CW-only.
>
>> >Limit 100 watts output on any band.

>the "learning curve"...?!?!

The point of an entry-level license is to offer an easy way to get started, and
an incentive to learn by doing. That's what the old Novice was all about, and
what a new "Basic" or whatever should be about. Making the test simple is part
of that.

Source record: 86705

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of February 1, 2004:

Novice - 32,611 (decrease of 16,718)
Technician - 260,018 (increase of 54,624)
Technician Plus - 62,284 (decrease of 66,576)
General - 141,207 (increase of 28,530)
Advanced - 81,699 (decrease of 18,083)
Extra - 104,923 (increase of 26,173)
Total - 682,742 (increase of 7,950)

>outside groups do not use Morse code any more, so it isn't needed. Since
>outside groups don't use "trained radio operators" any more, this is one
>more reason not to test for anything.

We've been going in that direction for almost 30 years, Mike.

The issue isn't Morse Code testing or question pools or VEs vs. FCC examiners.
It's much bigger than that.

Remember the old original Rod Serling "Twilight Zone" TV show? One of the most memorable episodes was called "The Obsolete Man". Starred Burgess Meredith and Dennis Weaver in a future totalitarian state where most books were banned. Meredith's character was a librarian - and was declared "obsolete" by The State,
because without most books there was no need for libraries or librarians.

From the beginnings of radio, the concept of "radio operator" has been part of our thinking. To us, that concept means "a person trained and skilled in the operation and adjustment of radio equipment". An honorable profession going back to at least Jack Binns if not before.

Remember when ham rigs required skill and knowledge to use? A piece of gear that the average person couldn't get a peep out of becomes a worldwide communications system in the right hands. Some folks don't like that.

And it's exactly the concept of "radio operator" that some want to eliminate, I think.

In the case of maritime radio, it was for economic reasons - the beancounters said it was cheaper to buy satellite equipment than to pay ROs. Coast Guard could replace their coast stations and ops with automated stuff. The military and airlines did it years ago for similar reasons. Broadcasters hopped on the wagon several years ago too. In fact it goes all the way back to Western Union and the RRs getting rid of the wire telegraph.

The idea they're selling is simply that radio isn't supposed to require radio operators, just as the telephone network and the internet don't require them. That's why they avoid the word "radio" and instead say "cellphone" or "wireless network" or "broadband" or "satellite" - *anything* but "radio". The "modern" equipment is supposed to be so automatic that there's no need for operators, or their skills.

Of course they can't just come out and say that, nor eliminate the licenses. I don't see how arguing the point with FCC can accomplish anything but get them mad at us, which we don't need.

I think the some folks are trying to slowly but surely declare radio operators "obsolete" - along with their licenses.

All that's left is us hams to keep the concept alive.
>
> Carl will be very upset you put *this* idea in people minds too! ;^)
>
Carl has expressed his disdain for the concept of skilled radio operators here. Look up some of his posts under his old call (WA6VSE) and phrases such as "electronic paintball wars" "stomp into the dust" "wetware modem" "emulate a modem" "better modes and modulations"....

You know, Alex, if Kim had used that as her justification, and had never
mentioned her "well-endowed" figure and the dare she took from friends
to request that call sign, I might have accepted that reason. However,
I would have suggested that "TET" would have been even better. Her
only problem then may have been an adverse reaction by Vietnam-Era
Veterans. It was Kim who raised the issues of her physical characteristics
in regard to her call sign, for the sole purpose of calling attention to them.

Billy:

Not hardly. Young Miss Clauson bears the unfortunate burden of being a
New Age, Dumbed-Down "Nickle" Extra. I got my Extra in 1983, and was
code tested at 20 WPM at the FCC Field Office in Baltimore. Moreover,
I learned my electrical theory from years of self-study as an avid electronics
hobbyist, built dozens of homebrew and kit projects, and spent years as
an avid shortwave listener. I did all of this without the benefit of parents
who were amateur radio operators, and almost no exposure to other hams
as a result. Young Mattie has an Extra-class ticket, and the same privileges
as I do, but that's where our "equality" ends. She has to melt quite a few
pounds of 60/40 rosin-core, and make several thousand CW and digital
QSO's, to get close to me!

Yep. But there's also the aspect of "self-training", where the person with the
question tries to find the information on their own *before* asking.
>

>A closed test pool is no panacea.

There's more:

I have the old ARRL License Manuals from 1948, 1951, 1954, 1962 and 1971. The study guides in those books are full of draw-a-diagram questions, power supply, filter and transmitter questions, plus all sorts of other stuff like magnetrons, neutralization, TV, RTTY, FM and SSB.. But there are very few questions on receivers and antennas, particularly in the lower license calsses and older versions.

The length of a dipole question appears exactly once - in the 1971 manual only, for the Advanced class.

In fact, if you read the study guides carefully, it becomes clear that they are heavily focused on transmitter design and operation to avoid interference, and regulations.

For that I definitely blame the Internet.

In days gone by when one had to go to the library for information, two
things were different:

1) The world in general wasn't made aware of your ignorance.

2) By having to go through a book you usually picked up some other pieces
of information.

In today's age, the Internet is touted as the grand source of all
information with instant response.

Hence the huge number of really ignorant questions on USENET and mailing
lists that show the questioner has obviously never bothered to read a book
or manual because anything you want to know can be found through the
Internet just by asking.

What's even worse is these people don't bother to do a search of archives or
FAQs to see if the question has already been asked, which it generally has.

This mode of operation is by no means limited to amateur radio; it appears
to an epidemic of major proportions.

Unfortunately, I can think of no solution to the problem in general, nor
one specific to amateur radio other than to just accept the situation for
what it is and get on with life. Bitching about it is just a waste of time.

Yes, around thousands of active duty military personnel and civilian employees of the military.

And now I have to cut this short, Jim. I'm starting a new business and it's really eating up my time at the moment. Things should settle down in a few days. Until then, this newsgroup will have to take a back seat. Take care.

EXACTLY!

I first noticed this on rec.radio.amateur.antenna. Despite lots of websites
dealing with the G5RV and T2FD antennas, it seemed that about every other
thread was about either one or the other of those two. Worse, the *same*
questions would be asked over and over.
>
>This mode of operation is by no means limited to amateur radio; it appears

Agreed.
>
>Unfortunately, I can think of no solution to the problem in general, nor

On the one hand, folks like me *want* to Elmer the newcomers, but on the other, we don't want to spend all our time answering the same questions over and over and simultaneously reinforcing the behavior of "learned helplessness" where the person doesn't even *try* to figure out or research the answer.

One thing I've done is to respond more to questions where it's obvious that the

person has at least tried to find the answer themselves, and is now stumped on a particular point. Another approach is to answer in URLs.

Unfortunately you are wrong. There are any number of folks who
happen along here asking questions from time-to-time that are easily
answered in any number of texts. And many of those folks "ID" with an
Amateur callsign of a class that SHOULD know.

> Only the ignorant are going to post things like that and the posts
> will stand out in your memory but you will never know how many read
> that post and just thought to their self "how did that guy get a
> license".

I know the answer to THAT question...

"They" used a verbatim "Q&A" guide that allowed them to memorize
enough to pass the test.

> > If such questions were answered simply and correctly, and perhaps some
> references given as to where such things may be found (such as ARRL
> publications) without the usual derisive comments, maybe a goodly
> part of the training you hope for would take place.

And when those folks show up here I DO answer them, as precisely
and as cordially as I can. However, had they been required to actually
KNOW the material they "tested" on, they'd already know the
answer...or at least know where to find it without embarrassing
themselves.

> A closed test pool is no panacea.

A closed pool would require those who took the tests tom actually
KNOW the material

> > And if it were up to me, the FAA pools WOULD be closed. I can
> > tolerate the idea of a 71% correct Amateur Extra, but I'd rather not

>
> Those that memorize the tests tend to get scores closer to 100% than
> to 70%.

But WHAT do they know?

They "know" if they see "this" question, the answer will be
"c"...and nothing more.
>
> For some insight on the testing process and question pool challenges
> for the FAA, see http://www.avweb.com/news/columns/186574-1.html.

Interesting. Still doesn't fix the problem, though.

Good luck in the new venture! I dare say that if it has anything to do
with young (10 and under) children, you may be surprised at how many
of them have at least one parent in the 40-50 y.o. range.

Nor do I "defend" NCI or any of it's "policies". I realize there
are some well-meaning, well-intentioned folks in NCI who think they
are doing (did) the right thing. I respect them for standing up for
thier beliefs and using the democratic system the way it was meant to
be used, but therein ends any "mutual" understanding.

If "Amateur history" was able to allow folks with dissimilar
languages to communicate via 2-way radio, even in this most
rudimentary manner, then yes, I'd support it.

However it doesn't. Morse Code however, does.

> And the mode still exists and can even be used on all amateur

Do you have a reference of all international band allocations so
that when an Amateur of ANY nationality answers your call, you can
quickly look up that nations's regulations and determine the alidity
of that station's operation?

That's what you're suggesting.

True, one can operate CW in any portion of the band, but if you are in the phone band, you can answer a CW station on phone, you don't have to answer in CW as opposed to if you are in the portion of the band where one can not use phone, ie., must use CW, thus the "CW" portion of the band, you must answer in CW.

It is? Since when? That topic is often discussed but just where does it state the purpose of the group is Morse testing?

The exam is receive only.

So what good is being able to receive Morse if you can't send it? You must be one of the cbplussers ULX speaks frequently of. And I still stand behind my statement that kim probably can't send CW, or bet she can't copy it either.

> And that's not going to change much.

If anything the ratio will get worse. I've seen too many examples of new-wave 5wpm ex-Tech Extras who have yet to make the first move toward putting an HF station on the air to believe otherwise. I'm not at all convinced that expanded HF privs is all that much of an incentive to upgrade these days vs. earlier days. Prolly has more to do today with the incentive to acquire bragging rights vs. anything to do with actually operating.

I'm talking about the much longer term thru the highs and the lows. In years gone by there was always chatter in the Extra phone setasides, not with just sunspot-affected dx, but with."locals". After the last FD I decided to dredge up a ragchew in the 20 phone setaside before I tore down. Usta be no sweat. I had to tune around for ten minutes until w3bv came on the air and we yakked for 45 minutes via ground path.. Mid day, the spots were middling and the dx was there. The only w's in the space were a small group of 8s & 9s and Alan (keeper of the k3jh pole) and I. All of us were old 1 x 2s. Message there.

Steve, the NPRM came out in 1998 with the writing on the wall. You've
had a long time to get used to the idea, and a long time to accept it.
You've suprised me recenty with a mature attitude toward the whole
ordeal - thanks.

Had the chips gone the other way we simply would have kept trying.

No, Steve, I'm not suggesting that at all. Notice that I referenced
one country, and that was France. See above. A French amateur
replied to Dave what the French 6 Meter allocations were, and another
ham on here verified the allocations via a French telecom website.
Its really not as hard as you think it is.

So if you know that Frenchmen are on 6 Meters out of band, do you keep
working them? What if it's a downtown Dar el Salam hazing ritual?

I came to RF from the audio and computer end of things. I probably will
ask questions that may elicit a few snickers from time to time. anyone
that thinks I'm an idiot is free to not answer the question! ;^) Self
training is a great thing. In fact I'll use a book and study before I
ask another ham.

Yup, that was a probably a priority in those days. What is your
opinion, Jim? given the study guide as a reference, were the tests
likely easier, harder, or not much difference?

ahh r.r.a.a! Now there is a interesting place! There are some
interesting characters there. Anyone that posts a "simple" question
there does so at their own risk. Threads undergo an instant
transformation from a question to unintelligible arguments between the
hoi-polloi on some minute point in the post. The experts that are
bothered by us dummies can rest secure though, because we usually go
away completely befuddled. They almost had me talked out of the idea of
ever getting on the air. Not enough antenna height, not enough space,
not a good enough ground, not a good enough tuner.... And that was just
the stuff I could understand! There really should be two separate
newsgroups: rec.radio.amateur.antenna, and
rec.radio.amateur.I.just.want.to.put.up.something.that.will.get.a.signal.out.

I dunno, Jim. I suspect that teachers DO spend a lot of time answering
the same questions, and I suspect it was that way long before the
internet or liberals or whatever our favorite blame target is.

In the end, you can find out if the person wants spoon fed by seeing
what their second question is, no the first. And very importantly, how
they respond to the reference lists you send them.

Dunno. That always puzzled me. Just one of the many oddities of the
inventive licensing system.

You
> must be one of the cbplussers ULX speaks frequently of.

If you're listening to ULX, you've got bigger problems than CB radio.
You probably really hated passing that $250 over to him.

And I still

Depends entirely on the person. For some people, such nonverbal stuff is
easy, while for others it's really tough. Similar to the way some people have
no
problem reading maps or blueprints, while others are completely befuddled by

such things.

>> The length of a dipole question appears exactly once - in the 1971 manual
>> only, for the Advanced class.
>>
>> In fact, if you read the study guides carefully, it becomes clear that
>> they
>> are heavily focused on transmitter design and operation to avoid
>> interference, and regulations.
>
> Yup, that was a probably a priority in those days.

It seems to me that a *lot* of the old exams was based on problems they
had experienced with hams. Hum modulation on ham signals? Ask a lot
of questions on rectifiers and filters. Some hams wander outside the band
edges? Lots of questions on band edges, frequency meters and computing the
tolerance of crystals an measuring systems.

>What is your
>opinion, Jim? given the study guide as a reference, were the tests
>likely easier, harder, or not much difference?

It's impossible to say for sure without the actual tests.

However, having read all of the guides, and having taken the tests that way,
I'd say that the old exams required a prospective ham to have a better
understanding of radio than the modern ones. While the modern tests cover more
subjects, they do so at a much lower level.

But what's most important is that the old guides only gave a general idea of
the
subject areas. For example, you knew there would be some fancy Ohm's Law
questions on the test (because the study guide had 'em) but you didn't know
exactly what they'd look like, or what the numbers would be. So you learned
Ohm's Law backwards, forwards and upside down just in case. And that was just
one subject.

Also, the old exams used multiple choice exams with 5 choise, not 4.

But we're not going back to those days, so other methods must be used. One
solution is to make the question pool so large and varied that it's easier for
99% of prospective hams to just learn the material rather than memorize or
word-associate their way to a passing grade.

billybeeper@juno.com (William) writes:

>> Billy:
>>
>> Not hardly. Young Miss Clauson bears the unfortunate burden of being a
>> New Age, Dumbed-Down "Nickle" Extra.
>
>Larry, you're so quick to tear down the achievements of a child.

Billy:

Point taken, and I offer all appropriate apologies to Miss Clauson.
However, her achievement, while a fairly notable one ***for a child,***
is no longer noteworthy for anyone over the age of, say, 10 years,
and certainly a meaningless one for an adult. I'd go farther to say
that the the amateur radio licensing requirements of the time when
I was licensed (early '80's) were nothing that could not be easily
achieved by the typical high-school student, even though there were,
in fact, some kids in the single-digit ages who were getting Extra with
the support of their ham parents.

Mattie Clauson's achievement only points accusingly to the fact that
present amateur radio licensing requirements are "dumbed-down" to
such an unreasonably low level that even a 7-year old can attain an
Amateur Extra-class license. And while the novelty of a 7-year old
Extra is certainly "news" in the Amateur Radio community, it does
not point to a secure future for our hobby/service. One must keep in
mind that she had the support of a mother who is also an Extra-class
licensee, and young Mattie was undoubtedly "pushed" along the
licensing process, whether Mrs. Clauson will admit to that or not.
Any of Mattie's young peers, without the support of a licensed parent,
and the material support of a functional station in their home, would
not likely achieve the same results. About the best we can hope for
is that other ham parents will take similar steps to induce their
children to become licensed, but that's about as far as it can go
until they become adults, with their own financial resources and the
adult prerogatives that go with it.

About the best face I can put on this is that young Mattie now has
the rest of her life to "grow" into the hobby. Hopefully, over the
years, she will acquire technical knowledge and operating skills which
will become equivalent to her Amateur Extra status. As of now,
however, she is more of a stunt than the real thing. I have no
doubt that when asked to engage in even a fairly low-level discussion
of technical and operating subjects, she will not be able to give

any reasonable accounting of herself, beyond perhaps the simple recitation of answers to the exam questions. The news articles make no mention of her on-the-air involvement in CW or digital modes, just the fact that she likes HF/SSB phone. Big deal -- a 7-year old who can push a button and talk! I'm sure she can use a telephone as well! But can she solder a PL-259 onto a piece of LMR 400 Coax? Can she build a dipole for 40-meters? Can she set up a Field Day station on her own? Can she build an interface so she can use PSK-31 and other digital modes on her parents' computer? Does she even know which end of the soldering iron gets hot? I have my doubts about all of the above, and I would think that these should be the minimum skill requirements for ANY amateur radio license.

Again, none of Mattie's inadequacies are her fault, she is just the product of her parent's dreams. But I do not consider her to be my "equal" as an Amateur Extra in any but the most rudimentary aspects -- those being that she has the ticket and the privileges. I had fourteen years of experience as an electronics hobbyist, project builder, and SWL before I ever got my Novice. As a result, I progressed to Extra at what was, at the time a notably rapid pace. Anyway, I look forward to working Mattie someday in CW or one of the digital modes. I just hope I get the chance, since I will not likely work her on HF phone.

Sure it is...If we do it for "the French", then why not the
Russians, Poles, Czechs, South Africans, etc etc etc...?!?!

> So if you know that Frenchmen are on 6 Meters out of band, do you keep
> working them? What if it's a downtown Dar el Salam hazing ritual?

How am I to know from one day to the next what a Frrenchman's
allocations are? Thier government is just as likely as ours is to
change the rules, so without keeping a database of some sort on
EVERYONE'S allocations, how is a prudent American Amateur to know if
the guy/gal he's working is "legit" or not?

Now you've opened another can of worms, Mike. I'm sure that you'll hear from those who find it difficult to draw if only to tell you that they regard drawing as a hazing ritual or as jumping through a hoop. Indeed little William Weeper will no doubt chime in that he isn't sure what a hoop is but that he'll know one when he sees it.

I'll try clearing it up for you again, Willie. I am responsible for
operating my station in spectrum assigned to me. I am in no way
responsible for ensuring that other radio amateurs operate where they
are licensed to be. French amateurs, regardless of amateur band, are
responsible for operating where their licenses permit them to be, using
modes permitted them and using power which their licenses permit.

It has been suggested on numerous occasions that you should take the
matter up with the RAEF or the French PTT. I'll now suggest it once
again. March with your banner held high. Write petitions. Lobby the
French government. Make certain that scofflaw French amateurs are taken
to task by their government.

> So if you know that Frenchmen are on 6 Meters out of band, do you keep
> working them?

You sit there with your charts and graphs in hopes of a 6m opening to anywhere, ready to maintain order on the band. I'll operate under the terms of my license and let authorities elsewhere control their amateur radio licensees.

> What if it's a downtown Dar el Salam hazing ritual?

I've seen downtown Dar es Salaam hazing rituals. You couldn't handle one.

The former record holder was an 8 year old in 3rd grade when she
got her Extra.

Back in the days of secret pools, essay and draw-a-diagram exams and
before the Novice or Tech existed, a local ham earned her Class B
license at the FCC office in Philly - a few days after her 10th
birthday.

That's one way to look at it. The way I prefer to look at it is that a
bright and motivated young child set herself a goal and achieved it.

> And while the novelty of a 7-year old
> Extra is certainly "news" in the Amateur Radio community, it does
> not point to a secure future for our hobby/service.

Why not? I don't see anything wrong with young people, or females,
getting
licenses. In fact, I think that sort of thing is just what ham radio
needs *more* of!

> One must keep in
> mind that she had the support of a mother who is also an Extra-class
> licensee,

And a father, and a grandmother, and a great-grandfather who were/are
hams. Why single out her mother?

> and young Mattie was undoubtedly "pushed" along the
> licensing process, whether Mrs. Clauson will admit to that or not.

Do you know the family? Or is this just a rationalization?

> Any of Mattie's young peers, without the support of a licensed parent,
> and the material support of a functional station in their home, would
> not likely achieve the same results.

So what? Part of what healthy families *DO* is support each other's
needs
and interests. In that family, it's clear that ham radio is a family
thing,
not something one family member does in seclusion from the rest.
That's a
good thing. It brings families together, crosses generational
barriers, helps
build a level of education, maturity and understanding that are
greatly needed.

And there is no better way to help a child learn than to get them
interested in the subject. Geography? Time zones? Math, science,
technology? An interest in ham radio helps with all of those.

> (About the best we can hope for
> is that other ham parents will take similar steps to induce their
> children to become licensed, but that's about as far as it can go
> until they become adults, with their own financial resources and the
> adult prerogatives that go with it.
>
It's simply a matter of *SUPPORTING* a child's interests. I know
families that are very musically-oriented, and if a child expresses
any interest in music, an instrument and lessons are provided. Not
pushed - supported. Would you expect a
7 year old to buy her own piano and pay for her own lessons?

I never got any help in the ham radio area from my folks. So I was
delayed a few years in getting started. That doesn't mean other young
hams shouldn't have family support.

> About the best face I can put on this is that young Mattie now has
> the rest of her life to "grow" into the hobby. Hopefully, over the

Nonsense, Larry. She's an individual. Kids are not robots.

> But I do not consider her
> to be my "equal" as an Amateur Extra

Y'know, the irony is that by making such a statement, you prove that *you* are not up to being *her* equal.

> in any but the most
> rudimentary aspects -- those being that she has the ticket and the
> privileges.

What if there are things she can do better than you?

> I had fourteen years of experience as an electronics
> hobbyist, project builder, and SWL before I ever got my Novice.

Well, ya got me beat, 'cause I wasn't even alive 14 years before I got mine.

> As a result, I progressed to Extra at what was, at the time a
> notably rapid pace.

There are folks who walk into a test session with no ham license and walk out with an Extra. That was going on before the VE system, too. The barely-10-year-old I mentioned above had to do 13 wpm sending and receiving plus the old Class B/General written.

> Anyway, I look forward to working Mattie
> someday in CW or one of the digital modes. I just hope I get
> the chance, since I will not likely work her on HF phone.

Larry, somehow I think that if she saw your posts she might not want to talk to you......

I don't know whether a particular ham is my "equal" or not. In some ways I'm probably better, and in other ways the other ham may be better. Unless we're in a mutually-agreed upon competition, I really don't care.

I say congratulations to a new Extra and her family. We need more of that sort of thing.

2019. What is this military transceiver ?

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-03 16:46:25 UTC
From: not@top-post
Message-ID: <i9idnV8Jo7P8TYLdRVn-hw@is.co.za>
Source record: 86745
Cross-posted to: rec.radio.amateur.policy,alt.ham-radio.dxing,rec.radio.amateur.misc

Hi,

I decided to open up this military transceiver which a tenant
left about a decade ago -- during the non-pc days of s. africa.

It looks as if it was for a tank or armoured car. Made by Barlows.
2 units SO/53 and VS/57 which strap into a base unit: the
power distributor B57.

It's 30 - 40 Hz steppable.

Q1. Is this one of the military frequencies ?

The SO/53 unit has 7 internal cans: Tx, VCO, TLT, Audio, IF, I.C.,Front End.

Q2. what are TLT and I.C. ?

After carefully tracing/testing the power (24 VDC), I obviously want to
monitor the audio out, which I'm guessing is to earphones; but I can't
find any obvious connector.

There are 2 connectors: 8-pin on the SO/53 unit and a similar one on
the base-power-distrubutor unit. They have 'dust covers'.

Q3. Is this possibly the earphone/mic I/O ?
Why would there be 2 on the SO/53 unit and one the base-unit ?
Perhaps to allow 2 or 3 persons to listen ?

Q4. Is there a standard military configuration, or must I just measure
between the 8 pins to find out which is the audio-out ?

The SO/53 unit has a coax/bnc to the VS/57 unit marked 'anten'
and next to it [and confirmewd from inside going to the same RF LC
group] what-looks-like a female thread for a whip-antenea, which
is 5.7 ohm to chassis. Since the thread is horizontal, someone suggested
that the unit could be unclipped and worn vertically on the belt;
except how the power-source-springs would be replaced is not clear.

Q5. How else could a whip operate when the female thread is
horizontal ? OK perhaps the 'dials face upwards' !?

The lower VS/57 unit seems to be the RF power unit, with some 1 watt
resistors and 'flat rf transistors': TWR pt9783 & vmp4 7848
and some TTL which together with 2 leds which change from green to
red, indicate various diagnostic states.

Q6. How could I proceed to test this thing ?
I've got 1970 - 1980 telecoms experience but not really RF.

Thanks for any advice possibly email also to:

easlab AT absamail . co . za

Just like the difficulties I had with learning Morse, a person that has trouble with drawing should just work hard at it!

I dunno where the idea of working hard if you need to went to, but it seems to have gone somewhere.

That's all SOME of us are asking might be more accurate. Others take
umbrage at the asking.

Or me with Morse! 8^) It is amazing to me that in the past year, I have
learned DVD production authoring,learned a new 3-D rendering program,
taught myself visual basic programming, and am learning (of all things)
pottery making); and am now getting proficient in each. Yet I have spent
more time on learning Morse code than all the others combined, and still
am pretty rank at it. Not complaining, mind ya, (well maybe a little) it
just serves to make your point.

But ya duz what you have to do!

The present pool has IIRC around 800some questions. That is getting to
the level you speak of. When I studied for mine, I went over all them,
although there is another incentive to learn the material, because
several of the questions are similar, and the answers are shifted
around. Question 32's answer might be "A" in the pool, but "C" on the
real test.

It's been something like twelve years since the first of the piles of
nocodes hit the bands >30Mhz. Mayber it's happened and I missed it but
I have yet to see or hear of a single example of a nocode
experimenting with a new wide mode. For that matter none of the Extra
"wideband digigeeks"who have bleated the same refrain have done
anything but talk either.

Worn out transparent old smokescreen, all of it.

Hello? This newsgroup is about RADIO, specifically amateur radio.

It isn't about nursing or flying or the USMC school of helicopter maintenance.

You and Larrah ought to get together in a Superiors Club to show everyone how it is done based on how good you both are... :-)

USA amateur radio regulations require only a MINIMUM of 10 for every written test element question. There is NO maximum.

Anyone who wants a "tougher" test that all but the eidetic could not memorize ought to bug the VEC Question Pool Committee. They decide on how big the question pool is, not the FCC.

I've been repeating the above for quite a while...but it seems that "new ideas" have a difficult time catching on... :-)

>information with instant response.

It IS a grand source of information...but takes a few seconds or
minutes to respond. :-)

The Internet is a SUPERB source of information, everything from
simple through complex in technology, from primers in electronics
to vast archives of application notes from leading electronics
manufacturers. I use it regularly.

The home office room my wife and I share has 39 lineal feet of
bookshelving, books packed in literally cover to cover. Good
reference material collected over half a century of time, mostly
mine. Given the cost of textbooks today, collecting all of that
would be prohibitive now.

>Hence the huge number of really ignorant questions on USENET and mailing
>lists that show the questioner has obviously never bothered to read a book
>or manual because anything you want to know can be found through the
>Internet just by asking.

Classrooms have always been full of the ignorant. That's why
classrooms exist. :-)

In the days of the old ARPANET (the "grandfather" of the Internet
and "father" of USENET) there were a number of ignorant users.
[been there, done that, got the T-shirts and TTY printouts]

>What's even worse is these people don't bother to do a search of archives or
>FAQs to see if the question has already been asked, which it generally has.

In olde-tyme days of classrooms, many students never used a
library. So, what else is new?

>This mode of operation is by no means limited to amateur radio; it appears
>to an epidemic of major proportions.

Shall we call the Center for Disease Control about this "epidemic?"

>Unfortunately, I can think of no solution to the problem in general, nor
>one specific to amateur radio other than to just accept the situation for
>what it is and get on with life. Bitching about it is just a waste of time.

You can always take Corrective Action.

One way is to recognize human beans and not carry on a bitch
session such as the above.

>It is? Since when? That topic is often discussed but just where does it
>state the purpose of the group is Morse testing?

This newsgroup was CREATED for the sole purpose of removing
the morse code testing issue from rec.radio.amateur.miscellaneous.

Morse code TESTING is a prime topic of GETTING INTO amateur
radio below 30 MHz. Ergo, the morse code test issue is most
prime for a discussion of amateur radio POLICY.

>The exam is receive only.

The omission of the morse code sending test is an OPTION of the
Volunteer Examiner team doing the testing. That is in the
regulations. VEs may invoke a sending test if they so wish.

>So what good is being able to receive Morse if you can't send it? You
>must be one of the cbplussers ULX speaks frequently of. And I still
>stand behind my statement that kim probably can't send CW, or bet she
>can't copy it either.

So what good is being tested for morse code...other than it being
the law for amateur radio license examinations in the USA having
below 30 MHz privileges?

The question-topic of the morse code test pertains to GETTING
INTO amateur radio below 30 MHz. Some have misconstrued the
essence of amateur radio as being a skilled radiotelegrapher.

There is nothing in the USA amateur regulations that mandates or compels any amateur radio licensee to use morse code over and above any other mode or modulation.

All allocated modes are optional to use in USA amateur radio. Optional. Option is not a failure.

>
>We've been going in that direction for almost 30 years, Mike.

You two are defining "trained radio operators" solely in terms of
RADIOTELEGRAPHY.

In the entire vast, much-bigger-than-amateurism world of radio
communications there is NO NEED of radio telegraphers. That has
been true for many years.

The FCC does not mandate, compel, or imply that morse code
must be used over and above any other allocated mode.

Yet, some radio amateurs insist that the essence, the prime
existance of amateur radio is all for radiotelegraphy skills. Why?

Rhetorical answer to the above should be obvious. :-)

>The issue isn't Morse Code testing or question pools or VEs vs. FCC
>examiners.
>It's much bigger than that.

"Much bigger than that?"

Not in this newsgroup. :-)

>Remember the old original Rod Serling "Twilight Zone" TV show? One of the
>most
>memorable episodes was called "The Obsolete Man". Starred Burgess Meredith
>and
>Dennis Weaver in a future totalitarian state where most books were banned.
>Meredith's character was a librarian - and was declared "obsolete" by The
>State,
>because without most books there was no need for libraries or librarians.

This newsgroup is NOT a forum for critiquing fictitious television
shows, FAA policy, or nursing.

FACT: Radiotelegraphy IS becoming obsolete, even in amateur radio.

FACT: Radiotelegraphy is NOT used for prime radio communications
outside of amateur radio except in isolated uses in maritime radio.

>From the beginnings of radio, the concept of "radio operator" has been part of
>our thinking. To us, that concept means "a person trained and skilled in the
>operation and adjustment of radio equipment".

To US who were in the big-time radio communications on HF of a half
century ago, that did not involve morse code. There were and still are
a lot of "US" involved in that.

As usual, there is considerable misconstruance on equating "skilled
radio operator" with radio telegrapher.

>An honorable profession
>going back to at least Jack Binns if not before.

Amateur radio is NOT a profession. By definition of law.

>Remember when ham rigs required skill and knowledge to use? A piece of gear
>that the average person couldn't get a peep out of becomes a worldwide
>communications system in the right hands. Some folks don't like that.

I was IN worldwide communications on HF over a half century ago.
At the time I liked it fine...even felt honored to be able to serve my
country doing just that.

None of that involved morse code.

>And it's exactly the concept of "radio operator" that some want to
>eliminate, I think.

You think mistakenly, but your freedom exists to state that you
think as you do and "much better" than others. :-)

Tens of thousands of skilled radio operators worldwide have used
worldwide communications effectively for decades without ever
once having to use or know morse code. They have done so for
over a half century.

The year is 2004. It is not the 1920s or the 1930s when radio was
a rarity that only a few knew or understood.

You cannot maintain a status quo in a technological field solely on
the grounds of having "mastered" a particular skill that was once a
necessity, especially one whose necessity was before your life
existance.

>In the case of maritime radio, it was for economic reasons - the beancounters
>said it was cheaper to buy satellite equipment than to pay ROs. Coast Guard
>could replace their coast stations and ops with automated stuff. The military
>and airlines did it years ago for similar reasons. Broadcasters hopped on the
>wagon several years ago too. In fact it goes all the way back to Western
>Union and the RRs getting rid of the wire telegraph.

Too narrow a focus.

The essence of radio operation is to effect COMMUNICATIONS. It is
not about USING a radio.

>The idea they're selling is simply that radio isn't supposed to require radio
>operators, just as the telephone network and the internet don't require them.

The only ones "selling" the concept of "skilled radio telegrapher" seems
to be the ARRL and its faithful Believer membership.

The U.S. military did not require any morsemanship to use the very
first handheld transceivers (on HF) for communications in 1940. That's
64 years ago. Neither did they require any morsemanship to use the
first backpack radio (on VHF) in 1943. That's 61 years ago.

Did broadcasters EVER use radiotelegraphy? I don't think so. The
broadcasters and the government of the USA tossed amateurs off of
MF a very long time ago. Broadcasters have continued to operate
on fixed frequencies for long, long operating times due to good design

of equipment, never really had any need to "operate" the radio transmitters in the amateur (apparent) definition. [been there, done that, got the signed backs licenses] Broadcasters concentrate on program production, not the continual operation of their transmitters.

The hundreds of thousands of PLMRS transceivers are not "operated" every day in the apparent amateur sense. The essence of such radios is to communicate and get information, not to "work other stations" to get QSL cards or to engage in "radiosport."

>That's why they avoid the word "radio" and instead say "cellphone" or "wireless
>network" or "broadband" or "satellite" - *anything* but "radio".

You haven't been in the wider world of radio communications if you think thusly. :-)

The key word in the rest of the radio world has always been COMMUNICATIONS, not the operation of radios.

A wireless network is called "wireless" since it does not use wires as in a wired local area network linking computes. Neither network requires "trained radio operators" to use and never did. :-)

"Satellite" as spoken of in the communications field refers to the communications satellite, usually (but not always) in a geo-synchronous orbit. There are other types of satellites and all of them use radio in various forms for control, guidance, telemetry as well as communications. There are no manned satellites yet. Only the International Space Station is manned.

"Broadband" is a generic term for any data, video, or other communications that requires a broad bandwidth in its propagation path. That applies to both wired, fibered, or radioed communications paths and the "broadness" depends on the rate of communications.

The telephone was conceived as a simple-to-use communications device, primarily for individual users. A cellular telephone is an extension of the telephone using a small two-way radio to complete the wireless extension. A "cellphone" is releatively easy to use, so much so that the number of USA cellphone subscribers is one in every three citizens.

>The "modern"
>equipment is supposed to be so automatic that there's no need for operators,
>or their skills.

That worked out very nicely, thanks be to the engineers and designers who made it all possible. :-)

>Of course they can't just come out and say that, nor eliminate the licenses.
>I don't see how arguing the point with FCC can accomplish anything but get
>them mad at us, which we don't need.

So...the old thoughts about keeping a living museum of ancient radio skills in amateurism is out? :-)

>I think the some folks are trying to slowly but surely declare radio operators
>"obsolete" - along with their licenses.

Radiotelegraphers ARE obsolete. They just refuse to admit it. :-)

>All that's left is us hams to keep the concept alive.

Ah! The concept of a living museum of ancient radio skills is still alive!

>> Carl will be very upset you put *this* idea in people minds too! ;^)
>>
>Carl has expressed his disdain for the concept of skilled radio operators here.
>Look up some of his posts under his old call (WA6VSE) and phrases such as
>"electronic paintball wars" "stomp into the dust" "wetware modem" "emulate a
>modem" "better modes and modulations"....

Tsk, tsk, tsk...still feeling pain of old, old newsgroup gropes? :-)

Olde-tyme radio amateurs who are firm Believers of the standards and practices of the 1930s should TRY to approach the new millennium with some up-to-date concepts.

Radiotelegraphy IS obsolete...everywhere but in amateur radio.

Radiotelegraphy is on the road to Defunctville.

Radiotelegraphy is as modern as horses and buggies on interstate highways...restricted to a cult status like the Amish who froze all their technology past an ancient time.

Keep polishing the handle on the door of the Living Museum of Archaic Radio. Who knows what visitors will show up?

2030. Well, BPL is coming to Rochester, NY :(

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-03 22:30:47 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <riVTb.13981$1Z4.4406@news01.roc.ny>
Source record: 86806

Hi gang!

Well, I've not been very active in the newsgroup since so much seems to be the old flames, but in case anyone is interested, I received an email at work. One of the hams passed along a note (names, of course, have been removed) and it appears that BPL will be coming to Rochester, NY. Sigh. My feeling is that the concept was fine, but everyone ignored the results of raising standards. In any case, here is the snip from the email.

**** begin quote****
I don't know if you've seen the ARRL video of RFI due to BPL systems
but it is a very dramatic demo. My brother, who works at RGE, says it is
coming here. Pass this along to any other hams that might be interested.
The ARRL BPL video is at:
http://216.167.96.120/BPL_Trial-web.mpg
**** end quote****

Rochester Gas & Electric is, of course, the local gas and electric distribution for my area.

I've had some fun on 440 and 10 meters too, but have not been active on the lower HF bands since 1969. There are some folks that think this is an amateur radio only problem; many of us know otherwise. I'm guessing I'll have to put up a 10 meter beacon at the least for now, but would love to have some serious input for suggestions. Obviously, I can make measurements (and I'm hoping I might be able to talk *real* nice to those guys at the cal lab I worked at some 8 years ago to make some measurements on calibrated equipment - Open Air Test Site) and try whatever.

Meanwhile, if we could avoid the flames, some serious suggestions would be most welcome from anyone (licensed or not).

73 from Rochester, NY

i would contact w1rfi at arrl hq and ask for a procedure to make some before and after measurements. that way if you do get interference you are prepared to document the damage and help not only yourself but many others out. don't just write down a few s meter readings, you will want to document the antennas used, all radio settings, frequencies, time of day, other normal noise, etc. it may be best to make measurements on certain frequencies at certain times of the day... say 75m at mid day, 10m at night, etc when other band noise is minimal.

I didn't say that. I said "if you knew that they were operating out
of band, would you work them anyway?"

No one other than Dave, and now you, has ever proposed having to know
all amateur allocations at all times.

The question was, "if you knew..."

Are you saying that you would knowingly work out of band amateurs?

> > So if you know that Frenchmen are on 6 Meters out of band, do you keep
> > working them? What if it's a downtown Dar el Salam hazing ritual?
>
> How am I to know from one day to the next what a Frrenchman's
> allocations are?

You're not being asked to.

I asked "if you knew that they were operating out of band, would you
work them anyway?"

No one other than Dave, and now you, has ever proposed having to know
all amateur allocations at all times.

The question was, "if you knew..."

Are you saying that you would knowingly work out of band amateurs?

> Thier government is just as likely as ours is to
> change the rules, so without keeping a database of some sort on
> EVERYONE'S allocations, how is a prudent American Amateur to know if
> the guy/gal he's working is "legit" or not?

That wasn't the question, and you know it. Just another diversion.
But I'll bet they're the same as when Dave was working out-of-banders
in downtown Dar es Salaam.

So many Dave apologists, so little time.

Sounds like you went to the same school that Larrah Roll went to.

Keep up the good work.

Remember, seven year olds can be Amateur Extras.

I'm sure that child put in many HOURS of WORK to achieve that
most responsible achievement of being able to access any
amateur band, even worldwide, all by her little self. [there's
absolutely nothing in the Part 97 regulations requiring any
"parental supervision" while operating transmitters...]

>several of the questions are similar, and the answers are shifted
>around. Question 32's answer might be "A" in the pool, but "C" on the
>real test.

The OLD ways are the "best" ways?

You have a complaint on the question pool? Go direct to the VEC QPC.
Do not pass Go, do not collect $200.

There is NO MAXIMUM on the number of pool questions. Those can be
20 times, 50 times, 100+ times the number of required questions per
test element. By LAW there must be 10 times the number but there has
never been any maximum. The maximum is optional.

Option is not a failure.

Do you have trouble drawing a salary?

Can you draw a draft of beer?

Can you draw flies?

I have NO trouble drawing legible schematics. Did that in 1956 in
Chicago at an FCC field office. Did that for years and years
in the southern California electronics-aerospace industry. Am still
doing it.

I just deposited a hefty check in the Bank this afternoon, all for
doing real work in electronics. From General Electric.

> I dunno where the idea of working hard if you need to went to, but it
>seems to have gone somewhere.

Well then, you need to get down to basics...like knowing how to
skillfully shoe a horse in order to get a driver's license...like being
skillful at blowing glass so you can make your own vacuum tubes
(even if vacuum sucks). All basics taking a LOT of "work."

I'm sure that making all those analogies is a lot of work, but I don't
need them any more than I needed to use any morse code to work
in HF radio communications a half century ago.

"When I was young we whittled our own ICs out of wood!" - anon.

Is PSK31 chopped liver? :-)

Maybe you don't recognize Peter Martinez, G3PLX?

He was experimenting with polyphase shifting networks for SSB
back in 1973.

>Worn out transparent old smokescreen, all of it.

Smoking isn't good for you. You ought to quit.

I'm being *accurate*.

>I was describing a subset of the waiver
>given, enough for the purpose of the argument.
>You described the entire
>waiver. Both are correct, and neither contradicts my arguments.

I find it interesting that you mentioned only the code test part of the waiver,
not
the written test part. Some folks might think the waiver only applied to the
code
tests.
>
>>That was long before my time, too. And it affected maybe 2% of the licensed
>>hams at the time.
>
>So you might accept grandfathering, if it occurred at some asymptotic
>point in the past, and only affected a small minority of hams?

Depends on the situation. The old Extra waiver only began after there was no
difference
among the operating privileges of a General, Conditional, Advanced or Extra
(1952 or later). IOW it was
just a title sort of thing - didn't make any difference in practical

application. And anyone who qualified
for it was an OT from the very early days (35 years at least). By the time the
waiver meant anything
in terms of operating privileges, that gap was over 51 years.

That's a completely different scenario than offering a free *upgrade* to almost
60% of existing hams,
plus any that might get ham tickets before the rules change.

>What
>percentage would be a threshold? You say that it is wrong to
>grandfather 60% of all hams, but you might be willing to accept
>grandfathering of 2% of all hams.

And I might not. Depends on the situation.

And the more I think about it, the more I think the old Extra waiver was a bad
idea, and that there may be
no scenario that would be worthwhile.

>What about a proposal that
>grandfathers some percentage of hams in-between?

I say no to free upgrades, then.

>What would be your
>greater objection, grandfathering all of the Techs, or grandfathering
>all of the Advanced?
>
What's the difference? They're both bad ideas.

>Remember that at some time in the future, we may be looking on this
>grandfathering as occurring at some asymptotic point in the past, as
>with the pre-1917 waiver above.

You mean like when the Advanced has been unavailable for 35+ years and their
numbers are down to about 1% of the ARS total?

>You ask below what is the long-term
>plan. I say one aspect of the plan is to be able to look back on this
>grandfathering in the same way that we look upon the pre-1917 waiver.

We don't look back on it the same way.

And why was it done?
>
>>>>- Amateurs who miss the one time upgrade have to take more tests than
>>>>those who didn't. How do we justify that?
>>>
>>>It's called "grandfathering," which is done in more regulatory contexts

>logical pitfall of false dichotomies, trichotomies, etc.). The status
>quo, which you have advocated, and might be labeled alternative #4 based
>on your exchange with Bill Sohl, is one such implicit alternative.

To put it simply: Just leave the closed-off classes alone, and let them
go away by attrition.

This is exactly what was done with the Advanced from the beginning of 1953
until 1967 - more than 14 years. What problems did it cause?

> I
>would argue against that, for the reasons I have given previously
>(streamlining of license classes, streamlining of band plans, reduction
>of regulatory burden, reduction in confusion for amateurs and the FCC,
>harmonization with the deletion of S25.5 and with other countries'
>regulations, etc.).

All it takes to keep those classes is a few sentences in Part 97.
>
>If license classes are consolidated to a smaller number, one alternative
>is simply to grandfather existing hams, which the ARRL has advocated.

A more accurate term is "free upgrade", because that's what it is.

"Grandfather" implies letting a person keep what they already have without
recertification. That's not what is proposed by the ARRL BoD for Techs and
Advanceds.

>One other implicit alternative (say, #5), is to make every Novice,
>Advanced (and possibly non-Plus, or would that be non-Plussed, Tech)
>come back in to take written tests to upgrade to the next level, or
>otherwise lose privileges.

That's the worst alternative.

>I would argue against that also, for the
>reasons I have also given previously (it is impractical to retest
>everyone,

It could easily be done over time by saying that you either retest before Date
X
or you'll be reclassified at a lower license class.

>and such existing hams are a large, stable user base such as
>that in the definition of grandfathering below).

"Large, stable user base"? We don't really know about that. How many
of those folks are active? Why have so few Advanceds upgraded to
Extra?

>>>The web site for Malvern Instrumentation gives a good definition of
>>>grandfathering in a technical context:
>>>
>>>"Grandfathering is the practice of claiming exemption of older systems
>>>from validation regulations and requirements on the basis that these
>>>systems have proved their reliability by adoption for a long period of
>>>time by a large user base."

IOW, we allow them to continue doing what they're doing because they've shown
a lack of problems in the past. But we require more of new systems.

It *doesn't* say we allow free upgrades.
>>>
>>>Grandfathering in the context of ham radio recognizes that existing hams
>>>have not only passed the tests in effect at the time, sometimes topics
>>>not covered presently (Morse code, drawing circuit diagrams, etc.), but
>>>have also gained experience beyond their initial exam topics. It is a
>>>fair, and pragmatic, distinction between existing hams and entry-level
>>>ones. Quoting again from the FAQ document:
>>>
>>>"Passing any amateur examination does not magically result in a good

>>Whatever. I don't see why the 5 wpm code test is such a big deal as a
>>requirement.
>
>Does your "Whatever" answer above mean that you support 5 WPM Morse code
>for all HF license classes, or just for Extra?

I support a code test for all amateur licenses, period. I think the dropping of
the
code test for the Tech back in 1991 was a mistake. I argued and commented
against it then, and much of what I said would happen has come to pass.

>If the former, then
>there is a very real distinction that will continue to exist in the

>>and Techs?
>
>So, again, as part of your status-quo alternative, you want to keep in
>place the regulations and bandplans for six classes of license, only
>five of which will be tracked in the FCC database six years from now.

Why not? Most of that is just a few lines in Part 97.

>>The 1998 proposal from ARRL Hq was for Tech Pluses and Novices to get a
>>freebie
>>to General - and FCC said no. What has changed that suddenly makes free
>>upgrades a good idea?
>
>The ARRL argues that this is now the second round of restructuring.

Then why wasn't the BoD ready for it?

>The
>FCC prefers to revisit things every few years, and do things in
>manageable chunks.

Meaning no disrespect, but - how do you know?

And if that is, indeed, the case, why not make a few changes now
(like the "NewNovice") and revisit in a few years?

>What is driving this second round is the lifting of
>the S25.5 requirement, the eventual need (in the ARRL's opinion, and
>mine) to address the shrinking pools of Novice and Advanced class
>licenses, as well as the fact that there will be no distinction in the
>FCC database between two classes of licenses with different privileges
>(Tech and Tech Plus) in the very near future.

Let's take those one at a time:

"shrinking pools of Novice and Advanced class licenses"

If the Novice is reopened to new issues and existing Novices get NewNovice
privileges as proposed by the BoD, the Novice shrinkage should stop.

Advanceds are shrinking at a very slow rate (16% in almost 4 years) so there's
no hurry in dealing with them.

"there will be no distinction in the FCC database between two classes of
licenses with different privileges
(Tech and Tech Plus) in the very near future"

Part of the proposal is for the code test for all but the Extra to go away, so
the difference between
Tech and Tech Plus becomes moot unless someone wants to get an Extra - at which
time all they
need do is present their old license or other document for Element 1 credit.

Or they can just take the code test!

So that's not an issue either.
>
>>>>>>>Rather, it is just one of

>
>I'm sure that you will argue in more detail than "Morse code is a big
>part of ham radio, and having no code test simply denies the reality of
>that."

OK, here's some more:

One of the Basis and Purposes of the ARS is technical education and skill
development.
IOW, hams learning about how radio works. Morse skill helps in this area
because Morse-capable radio equipment can be made using a very wide variety of
technologies and complexities.

IOW, the beginner can build a very simple Morse station, and improve it as
knowledge and skill expand.

>You may also have to find new arguments beyond those that the
>FCC rejected in Docket WT 98-143, including yours.

>
That was 5 years ago. Things change. And if FCC just dumps Element 1, as they may, the Tech and Tech plus can simply merge.

>>>and I
>>>remain skeptical that a Novice license (even a restructured one) is
>>>viable today.
>
>>What we have now is a system that tends to funnel newcomers into VHF/UHF
>>amateur radio, and manufactured equipment. And away from HF and homebrewing.
>>A restructured Novice could change that.
>
>Part of arguing for a new Novice license would involve identifying what
>has not worked with the present Novice license, and what changes would
>somehow "open the floodgates" with the proposed future one.

What didn't work was simply this: Getting a Novice required passing two tests (code and theory) while getting a Tech after 1991 required passing just one. So most new hams went for the Tech because it was perceived to be easier.

On top of that, the Novice didn't have 2 meters.

>You argue
>that most entry-level hams are being funneled to VHF/UHF.

They are. Look at the privileges. ALL of amateur VHF/UHF vs. four little slices of HF.

> might also
>argue that there are not very many entry-level hams at all, especially
>younger people, regardless of where they are being funneled.

Look at

http://www.ah0a.org

for numbers of new licenses granted each month.

In the past 12 months FCC issued 20,256 new amateur licenses. Is that "not very many"?

>The
>youngest members in most clubs locally are well into their mid-30's.
>The presence of teenagers has all but evaporated.

Why do you think that is?
>
>What types of realistic homebrewing are you advocating for "NewNovice"
>hams beyond 3-transistor OOK transmitters and single-conversion
>receivers? Please be specific.

What's wrong with those sorts of rigs for a start? There are also lots of good kits out there. And note that the "NewNovice" allows a wide variety of modes.

>What aspects of current communications
>technology, something that would be used and would not be a trophy or
>shop-project to be put on a shelf, can be realistically homebrewed via
>commercially-available (and presently-manufactured) parts by high-school
>age hams?

Lots of CW rigs, for a start. I built my first station from junk at age 13.

Do you think homebrewing is no longer practical? How about kits? Are
we to be nothing but appliance operators?

>When you argue for "NewNovice" privileges, are you supporting it with 5
>WPM code, or without?

I support a code test for *all* ham licenses. That probably won't happen, of
course.
But it's a good idea.

>What if almost no one wants to sign up for 5 WPM
>code as an entry-level requirement?

The ARRL proposal talks about how great the old Novice was in its heyday. 5 wpm
didn't stop hundreds of thousands of hams then - why should it do so now, when
we have more and better training methods?

The fact is that it's not the code test or the written test or the number of
license classes
which is/are the problem. It's things like lack of publicity, antenna
restrictions, and
competition from other activities.

>The original research paper on that particular topic was actually published
>in 1945. I have a copy of it somewhere...

No doubt something was done back then. A former RAF boffin named Clarke would have his geosychronous 3-satellite comm proposal published in Wireless World a couple years later. I was fortunate to read an original W.W. issue with that article. Right now ALL of the geosynchronous orbit positions are taken... :-)

Mike Gingell did his PhD thesis on the polyphase network (the four-phase version, not to be confused with other "polyphase" networks) in the UK. I have a copy of that courtesy of a UK amateur.

Several picked up on that thesis in the UK and Martinez' version was printed in Radio Communication magazine some time in 1973. My boss at RCA (Jim Hall, KD6JG) showed me that and it looked fascinating. I snitched some corporate computer time and analyzed it in LECAP, the RCA frequency-domain version of ECAP. I sent the results to Pat Hawker whose column ran the polyphase stuff and that was published in 1974 in Radio Communication.

Jim Hall is one of the "third-method" SSB innovators and his paper done at RCA remains as a footnote mention in the "Collins SSB book" although the authors got the third-method system descriptions mixed up.

Several in Yurp have used the Gingell values with success for SSB, including direct-conversion versions. One of Dan Tayloe's QRP receivers (D-C) uses that. A Japanese amateur surnamed Yoshida refined the values for even less quadrature phase error and that was published in QEX. The Gingell-Yoshida value set is most forgiving of component tolerances yet providing excellent very low error quadrature phasing across the audio voice band.

Mike Gingell moved the USA and got a U.S. amateur license, was living in an eastern state and was interested in satellite reception according to his personal website.

It's now 31 years later and most U.S. amateurs are ignorant of the Gingell circuit or haven't looked into it...most preferring to operate their ready-built, designed-by-commercial-engineers equipment.

The (Gingell) polyphase circuit has also been the subject of papers in the IEEE Transactions on Communications in the late 1970s and 1980s for applications other than SSB.

The basic PLL circuit was first described in 1932 (!) by France's H. de Bellescize but it doesn't bear a lot of resemblance to the modern PLLs using specialty ICs such as an MC145151. :-)

All things are as they were then except for some profound changes.

When did a 31 Hz wide mode become "wideband"?

> Maybe you don't recognize Peter Martinez, G3PLX?

I musta missed this one too, when did the FCC start passing out Extras
to Brits??

> He was experimenting with polyphase shifting networks for SSB
> back in 1973.

(a) When did bench-futzing SSB transmitter circuitry have anything to
do with putting a wideband signal on the air?

(b) When did SSB become "wideband"?

(c) You might note that phasing schemes for generating ssb signals
have about as much applicability to ham radio today as you have ever
had.

Some have amassed almost 80 countries on old-fashioned SSB, though. But that was when we had some sunspots.
>
>Worn out transparent old smokescreen, all of it.

As is this "bandwidtj based frequency plan" thing. Note that it would essentially
knock AM and NFM off much of amateur HF. Note also that besides drastically widening the 'phone subbands, it cuts down the incentive to get an Extra.

Most of all, note the unsubstantiated statements like 'by 2010, 30% will be Novice operators' and '80% of hams on HF radiate a medium bandwidth signal' and such. Where do these numbers come from? No response.

One type of amateur HF wideband "experimentation" I know of is some folks fooling around with "enhanced SSB", which is plain old SSB with the frequency range widenend to up to 9 kHz. Some call it "single wideband". There's also some digital voice experimentation going on, but the added complexity doesn't seem to give addded results. Yet.

And to answer your question: Yes, you can put a voice signal (digitized) through a 500 Hz pass band. You just need a modulation scheme meant for that application, and the tradeoff will come in the form of needing a really good S/N and/or more than real-time to send the message.

Yes and no. Memorizing the whole pool is one thing, but if there are only a few questions on one subject (say, Ohm's Law), it may be easier to just memorize or word-associate those few than to learn the material.

btw, the 1962 LM satudy guide for the Extra is 239 essay questions.

>When I studied for mine, I went over all them,

Sure, so you don't memorize them that way. You memorize/word associate "40 dipole/66feet" or some such.

Without the aforementioned database of EVERYONE'S allocations,
how would it be possible for anyone to KNOW who is "out of band" and
who's legit?

> > How am I to know from one day to the next what a Frrenchman's
> > allocations are?
>
> You're not being asked to.

(Sheeesh!)

SURE >I< am! Today I may "know" than the "F" guys can't use
52.525Mhz, but what about tomorrow...the day after...6 hours from now?

That's why it's incumbent upon the transmitting station to know
where he/she is operating...NOT me.

> I asked "if you knew that they were operating out of band, would you
> work them anyway?"

And without keeping some instantly updated database, HOW am I
supposed to know this?

> No one other than Dave, and now you, has ever proposed having to know
> all amateur allocations at all times.

Then that makes two of us who see the hillarity of your rantings
about who was "out-of-band" and who wasn't.

You and Lennie are the only two trying to make issue out of it.
Lennie tries because he's an idiot with NO license and NO experience
operating.

YOUR excuse...?!?!

> The question was, "if you knew..."

I would "know" if I had some means of being informed. I don't.
MOST U.S. Amateurs I know don't.

> Are you saying that you would knowingly work out of band amateurs?

Under what circumstances...I have "worked" stations out of my
"authorized" bands before. But I ALSO had good reason and

justification for it.

> > Thier government is just as likely as ours is to
> > change the rules, so without keeping a database of some sort on
> > EVERYONE'S allocations, how is a prudent American Amateur to know if
> > the guy/gal he's working is "legit" or not?
>
> That wasn't the question, and you know it. Just another diversion.
> But I'll bet they're the same as when Dave was working out-of-banders
> in downtown Dar es Salaam.

It's not a "diversion"...You are trying to insist that everyone
"know" where other Amateurs are legally operating or not...but then
you disclaim that's your intent...Your actions prove otherwise.

> So many Dave apologists, so little time.

It's not apolgetic. It's the truth.

HEY SCUMBAG!

This forum is about AMATEUR RADIO. You yourself have
"acknowledged" that on several occassions, yet you quickly "forget"
your own assertions when you want to "make" your point.

This is NOT "commercial" radio...Not the Armed Forces or maritime
services.

Are you having a problem with this concept?

Is your ONLY "argument" that since the military allegedly doesn't
use Morse Code, then we don't?

If so, you're a bigger idiot than you let on, although that in
itself would be a pretty hard order to fill.

I don't see much of a connect between your particular preferences and
the highly-probable reality in these cases. Parents and other
relatives impose expectations on kids all the time. I sure did. I
"motivated" mine any number of times into "achieving" and in some of
those cases they met my expectations just to get me off their backs.

> > And while the novelty of a 7-year old

> needs *more* of!

That's not what Larry meant. Over the 100 year history of ham radio
maybe we've had what, pick a number, twenty kids under ten licensed?
Versus around 1.5 million total U.S. hams? Those kids have all been
statistical anomalies pure and simple and have not had, nor will they
have any influence at all on the course of the service in the future.

> > Any of Mattie's young peers, without the support of a licensed parent,
> > and the material support of a functional station in their home, would

Absolutely. How many of these kids *didn't* have a ham in the
immediate family?

> So what? Part of what healthy families *DO* is support each other's

> I never got any help in the ham radio area from my folks. So I was
> delayed a few years in getting started.

Nothing unusual about that. A huge percentage of all of us kid hams
didn't have any particular "parental support" when we became hams. All
my folks cared about was that whatever it was that I was doing with a
soldering iron in the cellar didn't result in the Henny Carr the town
cop dragging me home by the scruff of my neck *again* for commiting
some bush-league juvenile atrocity or another. Worked for them and it
worked for me.

> > About the best face I can put on this is that young Mattie now has

>
> She got 4 wrong on Element 4. How many did you get wrong on yours?

No-counter: We all know that there is *no* relationship between
passing the tests and the level of useful knowledge reqired to put
together an HF ham station. This NG has glaring examples of same.

> > As of now,
> > however, she is more of a stunt than the real thing.
>
> How do you know?

He doesn't and neither do you. Fact is that it's not hard to find
instances of their folks pressuring kids into outstanding
accomplishments in order to have bragging rights about the kid. Which
I suspect is where Larry is coming from. Whether it's true in Mattie's
case is 100% conjecture.

> > I have no
> > doubt that when asked to engage in even a fairly low-level discussion

She's probably somewhere between the opposite poles you two guys live
in.

> Tell ya what, Larry, I'll fill a box with parts and you can come over
> and build afunctioning ham rig out of them. No instructions, no
> elmers, just parts and a book or two.
> I did it when I was 13. I doubt
> you could do it, Larry.

Virtually all yer kid ham predecessors could cobble rigs together
"Back in my day". It was almost the norm then. A lot higher
percentage of us designed and rolled our own than was the case "in
your day" a decade and a half later. By the time Larry got into ham
radio hombrewing no longer made any sense except in oddball cases so I
doubt he had any reason to even consider building his own rig. Entry
level rigs have been products of the era in which we came into the
service. YMMV and it obviously has.

> > Again, none of Mattie's inadequacies are her fault, she is just
> > the product of her parent's dreams.
>
> Nonsense, Larry. She's an individual. Kids are not robots.

C'mon, you know better than that. Seven year olds are about as
compliant as they come. They're "individuals" only to the extent that
their parents and teachers allow them to act independently.

> There are folks who walk into a test session with no ham license and
> walk out with an Extra. That was going on before the VE system, too.

I dunno. If I'm going to impress something on some brain cells, I'd just
as soon memorize Ohm's law as memorize specific test questions. Anyone
that would do elsewise is just getting what they deserve.

> btw, the 1962 LM satudy guide for the Extra is 239 essay questions.

I'd prefer it if the test were essay. not because it would be harder,
but because for me at least, it would be easier. I liked them in school,
I still like them.

For the circumstance you name, even that isn't too bad a thing. Of
course, knowing that 468/f is how you can find the length of a half wave
dipole is easier, and then you have something useful for *lots* of
frequencies.

I don't think they have any questions about quarter wave dipoles! ;^)

I heard about an unlicensed TV station in Nashville. Last time I was
down there I make an attempt to find the signal and was
successful. Although the video was not the greatest, the programming
was pretty good. A good dose of political opinion stuff, mixed
with entertainment. At times amateurish, other times professional.

[...]

Sole purpose? It seems a bit silly to try to scope any newsgroup,
especially an unmoderated one, to a "sole purpose." Nevertheless, if
you want to follow that line of argument, the historical record
disagrees with you.

During the discussion period preceding the newsgroup vote in 1991 that
realigned the rec.ham-radio.* newsgroups under rec.radio.amateur.*:

http://groups.google.com/groups?threadm=19%40shasta.Stanford.EDU

several other topics were brought up other than Morse code that could
(and eventually did) go into this newsgroup. Phil Howard, KA9WGN, did a
nice job of summarizing them:

http://groups.google.com/groups?selm=1990Dec16.063502.22468%40ux1.cso.uiuc.edu

and they included:

1. Proposed rules and petitions to the FCC
2. NPRM's issued by the FCC
3. Local antenna/tower issues, laws, covenants
4. Scanner laws and related issues
5. Bandplans and other operating agreements
6. Repeater coordination

Other names for this newsgroup that were considered, and rejected, by group consensus included .rules, .regs, .regulations, .legal, and even .fcc. It looks like Jim Grubs, W8GRT, gets the original credit for proposing the eventually accepted suffix, which was .policy:

http://groups.google.com/groups?selm=774.276E7E54%40w8grt.fidonet.org

The .policy suffix was adopted specifically because it recognized the broad range of laws, rules, regulations, consensus, private legal contracts, organizational agendas, and even gentlemen's agreements/understandings, that shape amateur radio.

Over the 13-year history of the .policy newsgroup, there have been many energetically debated topic threads about policy in amateur radio other than Morse code, including:

1. The legal consequences of using non-amateur radio communications systems, or even amateur radio equipment out-of-band, in an emergency
2. FCC PRB-1 and its impact on outdoor antenna regulations and covenants
3. The no-business rule of amateur radio, and its implications (a.k.a., "The Great Usenet Pizza Autopatch Debate")
4. The legal authority of frequency coordinators to enforce band plans and usage, resolve interference disputes, or even refarm existing analog FM voice repeaters to allow more room for other modes like packet
5. Interference issues, including that between amateur radio and FCC Part 15-regulated devices, and now Broadband over Powerlines (BPL)

You say that you have been participating on this newsgroup for about 7 years now. Haven't you noticed?

>your own assertions when you want to "make" your point.
>
> This is NOT "commercial" radio...Not the Armed Forces or maritime
>services.

Neither is it about "nursing" or "piloting," ace gunnery nurse.

However, radio is radio, and the physics of same does NOT change because an administration defines certain radio activities as "amateur."

> Are you having a problem with this concept?

No, but you are definitely still having a problem with "attitude."

> Is your ONLY "argument" that since the military allegedly doesn't
>use Morse Code, then we don't?

The U.S. military does NOT use any morse code for communications.

The U.S. military only requires morse code cognition by a relative handfull of military intelligence specialists engaged in monitoring and intercepting enemy and potential-enemy messaging.

> If so, you're a bigger idiot than you let on, although that in
>itself would be a pretty hard order to fill.

Now now, gunnery nurse, keep that B.P. down, take your blood pressure medication like a good patient...and climb down from

the table top, your fists were hitting the dining room light.

>When did a 31 Hz wide mode become "wideband"?

Martinez' innovation comes from scaling current wideband data
communications at high rates to the slow, real-time rates of
amateur radio environments. That involved some good application
of Information Theory and other things, not in being spoon-fed
How To Do It from the pages of QST.

>> Maybe you don't recognize Peter Martinez, G3PLX?
>
>I musta missed this one too, when did the FCC start passing out Extras
>to Brits??

"Brits?" The FCC has no jurisdiction to citizen-residents of the
United Kingdom. Did you miss out on geography and civics
classes olde-tymer?

>> He was experimenting with polyphase shifting networks for SSB
>> back in 1973.
>
>(a) When did bench-futzing SSB transmitter circuitry have anything to
>do with putting a wideband signal on the air?

"Bench-futzing" (as you so quaintly put it in tuff-guy phillytalk) is
essentially necessary to test and confirm a concept in hardware
on the bench.

Since you are unaquainted with radio-electronics design work, I may
have to explain it further for your education. "Bench-futzing" is how
all your ready-made, designed-by-others radio toys get developed.
Those don't spring into existance the moment you wave a plastic
card around in an HRO.

Define "wideband."

The narrowbanders on HF have very old concepts of "wideband"
considering they inhabit rather narrowband pieces of spectrum and
thinking that voice bandwidths of maximum 3 KHz are "wide."

>(b) When did SSB become "wideband"?

From Day One of SSB on radio. 12 KHz straight from Type C
Carrier equipment developed for Long Lines. Commercial. All
it needed was the RF end to replace the wires.

Militaries soon picked up on the commercial technique and ran
with that. Four voice-bandwidth channels over one transmitter.
Could easily handle eight TTY circuits and two voice circuits.
All on HF which "CW" (Conventional Wisdom) said couldn't be
done in 1990s even though it was running fine on HF in 1930s.

>(c) You might note that phasing schemes for generating ssb signals
>have about as much applicability to ham radio today as you have ever
>had.

Not only generating them but receiving them, olde-tymer.

Do you recognize the name Dan Tayloe? U.S. Amateur Extra.
Inventor of the Tayloe Mixer, ideally applicable to direct-
conversion receivers with excellent unwanted sideband rejection
if used with a following four-quadrature-phase network. In terms
of your great life experience longevity, an invention that was fairly
recent.

If you bother to look around at the rest of the radio environment, you might - if mental eyesight is still possible - see some startling new developments in radio communications that happened in the last half century. Even as you get red in the face reading this, there are a hundred million little cellular telephones in use in just the United States...little full-duplex HTs operating at about 1 GHz, small enough to easily hold in one hand. Those didn't exist that tiny, light, or as high in frequency three decades ago. Not an amateur radio innovation yet it has become a part of worldwide social culture.

Cordless telephones operate on up to the 5 GHz band now, are priced affordable for most in consumer electronics stores. Almost the size of cell phones and include caller ID while operating full-duplex. You won't recognize the leap in frequency increase because your radio world stops abruptly at 29.7 MHz and I doubt you can envision the uniqueness of solid-state RF circuitry, up to and including very high power solid-state that can be made modular with hot-swapping replacement of modules while operating (now the norm in high-power MF to UHF commercial transmitters). None of it was an amateur radio innovation or invention.

You have, in the past, sneered and scoffed at automatic antenna tuners yet Collins Radio designed that into the USMC-contract T-195 that became operational in 1955. First widespread use of the Bruene Detector for forward-reverse wave detection on HF. Hughes Aircraft at a Ground Division designed the AN/PRC-104 for the U.S. military, the basic manpack 20 W HF transceiver that featured an automatic antenna tuner in a battery-powered rig, operational in 1986. It has higher-powered versions for vehicular installation, still operational. Imagine that...auto antenna tuning in a portable unit! Not an amateur radio innovation or invention.

There's still testing going on with digital modulation of short-wave (HF spectrum) broadcasting but all indications are that it is a success after four years of such tests. The "CW" (Conventional Wisdom) pundits kept saying "it won't work, can't work on HF!" even though it did. Takes no more bandwidth than conventional AM yet offers more. All due to some innovation and invention by the "bench-futzers" who applied various techniques and Information Theory very cleverly. Several different ways are under investigation as to which one is best on the air. Not from amateur radio.

A quarter million manpack and vehicular radios have been made and fielded for 30 to 80 MHz use since 1989. Those feature 10 hops per second FHSS with digital voice or data and include built-in encryption/decryption secure mode in real-time. New versions are half the size of the old, the old being the same size/weight of the PRC-104. Not from amateur radio.

The number of handheld transceivers and mobile radios at VHF and higher in the commercial-government-military world easily outnumbers those HTs used by amateurs on amateur bands. The

one reason that amateur VHF-and-up equipment is available at low relative cost is that base market in the non-amateur radio field. Of course your amateur world doesn't extend above above HF so that isn't "real" amateur radio.

The Global Positioning Satellite System has become a reality, first tested in airborne reception in 1971 as NAVSTAR. Now it is a consumer item in electronics stores, useful to hikers, boaters, vehicle drivers of many kinds, farmers, among many who don't intend to drop big boom things (such as ICBMs) on nasties. It's also good for super-accurate time reference since each of the 24 GPS sats has a rubidium "atomic clock." Not an amateur radio development.

Speaking of accurate time, there's all sorts (over 30 brands) of "radio clocks" in consumer electronic stores that update themselves automatically to WWVB every day/night and display the results (including calendar info) on LCDs. Battery powered, under $30 off-the-shelf. Definitely not an amateur radio innovation-invention...very narrowband at 1 Hz digital data rate. :-)

Amateurs nowadays have HF transceivers that display operating frequency down to 10 Hz increments with "rock-solid" stability. It is taken for granted as if it was always so, yet only a couple of decades ago (slightly more) HF transceivers were of the VFO variety without the most stable rocks in the box. Very few hams have bothered to know anything but what the acronyms PLL and DDS mean, couldn't describe the frequency control system if their DXCC results depended on it. All brought about by commercial designer "bench-futzes" working with microprocessors and microcontrollers. May have been amateur radio related although such frequency control was also incorporated in commercial HF radio at the same market time.

Log-periodic antennas have been around for a half century, fine for HF, extremely broadband, useful for when new HF ham bands are allocated every quarter century or so (last big band increase was in 1979, latest in 2003). Numerical Electromagnetic Code and Method-of-Moments E-H Field Theory has been present for over a dozen years yet amateurs aren't jumping at the chance to use such computer programs to tailor them to their QTHs. Development funded by the USN, source code is free.

Well, I have to stand corrected. There just isn't that much innovation and invention IN amateur radio or BY amateur radio...and hasn't been for about the last half century.

Sunnavagun!

You keep on beeping, Kellie, tawkin tuff, and praising hum radio for raising the technical standards and leading the way in radio. CW gets through when everything else will, therefore it needs to be kept in the ham testing forever and ever.

Not necessarily, Brian, but studying for an amateur ticket gets kids fired up about learning. I can certainly see Jim's point about kids becoming interested in geography, the sciences and math. It didn't work toward interesting me in geometry though. I was caught reading QST hidden within my open geometry book.

For the first few weeks of my interest, my dad actively discouraged me with talk of amateur radio being a passing fad for me. He had visions of mounds of equipment gathering dust in a closet. My mother encouraged me and was able to convince my father that some of the meager family income should be spent on a transmitter for me if I earned the money for the receiver from my paper route.

My dad had and has no technical abilities whatever. My mother was deathly afraid of electricity and wouldn't even clean my ham shack. She just knew that lightning was going to enter the house via my antennas. Both parents saw value in amateur radio as a wholesome activity, one which would nurture an interest in science and possibly lead to a career in electronics.

For some of US who've had more recent experience than yours, morse was
involved. For many of us who are actually radio amateurs and who are
participants in big-time radio HF communications today, morse code is
still involved. What are you doing in big-time HF these days?

> I was IN worldwide communications on HF over a half century ago.
> At the time I liked it fine...even felt honored to be able to serve my

> None of that involved morse code.

...and because you didn't use morse, no one used it at the time or
since.
A number of us have used morse professionally and as radio amateurs in
the decades after you had your "big-time".

> Tens of thousands of skilled radio operators worldwide have used
> worldwide communications effectively for decades without ever
> once having to use or know morse code. They have done so for
> over a half century.

Tens of thousands of skilled radio ops worldwide *have* used morse
effectively for worldwide communications after your day in the sun.
Tens of thousands still do so.

> The U.S. military did not require any morsemanship to use the very
> first handheld transceivers (on HF) for communications in 1940. That's

Yet the military continued to use morse. What's your point?

> The hundreds of thousands of PLMRS transceivers are not "operated"
> every day in the apparent amateur sense. The essence of such
> radios is to communicate and get information, not to "work other
> stations" to get QSL cards or to engage in "radiosport."

The hundreds of thousands of amateur radio ops work DX, engage in radiosport, check into nets or engage in public service communications without touching a PLMRS transceiver.

> "Broadband" is a generic term for any data, video, or other
> communications that requires a broad bandwidth in its
> propagation path. That applies to both wired, fibered, or
> radioed communications paths and the "broadness" depends
> on the rate of communications.

I see. "Broadband" means "broad bandwidth". You could have knocked me over with a feather when I read your words. So to your way of thinking on "broadness", a morse communication at 5 wpm on 10 KHz could be considered "broadband"?

Poor baby. Feel injured, do you?

Keep the Faith and work, work, work on that morse code to prove to
the amateur community all your dedication and worthiness to the
Old Ways. They will all be proud of you. Remember, morse code
gets through when everything else will.

Don't forget Mass at St. Hiram's early in the morning.

I'm sure. :-)

<snip>

>Over the 13-year history of the .policy newsgroup, there have been many
>energetically debated topic threads about policy in amateur radio other
>than Morse code, including:

Ohhhh, there were LOTS more and most of them did NOT involve
anything at all to do with radio, let alone amateur radio. :-)

Do you REALLY want to go there? :-)

Google has nearly all of it...all the talk about choo-choo trains,
presidential politics in all its forms, U.S. foreign policy, breasts
and beasts, automobiles, flying airyplanes, small boats, morals
and morality, parenting, imaginary love lives, divorces, and
all kinds of things very much NOT concerning amateur radio.

Gosh and golly, Paul, I've only been working in radio-electronics
since 1952, didn't get into ARPANET until the 1970s, started
BBSing (as in computer-modem communications) in late 1984
and didn't have any real Internet account until 10 years ago.

I'm absolutely, positively agreeing with your vast experience
in this newsgroup. Since Day One of public-access Internet?

>You say that you have been participating on this newsgroup for about 7
>years now. Haven't you noticed?

Funny how some folks "notice" things that others don't. :-)

Tell you what, Paul, if you are really and truly upset, go to AOL
Member Services and DEMAND that they lock out my personal
access to this newsgroup. Go ahead, make everyone's day and
make it a CLOSED-to-all-but-amateur-licensees in order to "make
everyone happy." Make it ARRL-South for all I care.

Meanwhile, the FCC and other government agencies still maintain
an open-access-to-citizens policy, made even more open by the
Internet (now 13 years old?). I think that's a good thing. Lots of
folks in here want to rewrite the First Amendment and toss out
"little things" like freedom of speech and petitioning a government.

A rather long time ago I did big-time military communications (most
of it on HF) for three years and never used, nor had to know any
morse code. Never had to know or use it since. But, it seems an
Article of Faith that American Amateurism DEMANDS knowledge
of morse code demonstrated by federal testing in order to enjoy a

recreational radio activity done for personal pleasure. I don't think that's very fair or "democratic" and will keep on objecting to that unneeded test in public.

Feel free to object to my objection any which way you want. Just remember that Internetting is NOT amateur radio. My objection to your objection is probably going to happen...to you or anyone else...in any manner and form I care to use...whether or not some True Believer gets mad as heck and goes out of their way (or gourd) to toss out very clear LIBEL in a most personal way.

No problem to me. If I'm here and not in Houston, I can match anyone's shots, shot for shot, and salvo as I care to.

SO FAR in here, this forum doesn't require any amateur radio license to communicate on the Internet.

Sunnavagun! How about that? :-)

It's just plain goofy. She's advocating a new structure to "fix" the
current structure which ain't broke.

So is the ARRL by the way. They have a committee beavering away on a
similar propsal which is even *worse* than Bonnie's.

> Most of all, note the unsubstantiated statements like 'by 2010, 30% will be
> Novice operators' and '80% of hams on HF radiate a medium bandwidth signal' and
> such. Where do these numbers come from? No response.

What "Novices" with HF phone privs?? Mindless leap ahead. She's
playing ham politician but she's no good at the art.

> One type of amateur HF wideband "experimentation" I know of is some folks
> fooling around with "enhanced SSB", which is plain old SSB with the frequency
> range widenend to up to 9 kHz. Some call it "single wideband".

That garbage is simply ssb with tweeters, "hi-fi ssb", as if. Has
nothing to do with wideband digital ops. This kind of nonsense
periodically comes and goes, there have been at least a couple passes
at "supermodulation" schemes. They silently died and nobody went to
the funerals.

> There's also
> some digital voice experimentation going on, but the added complexity doesn't
> seem to give addded results. Yet.

The broadcasters have been putting an experimental 10 Khz wide AM mode called "DRM"on the air for a year or so. Runs data, text & "hi-fi" audio, no image or video so even at 10Khz wide it isn't a true multimedia mode. Existing AM/FM, swl and ham rcvrs will not process DRM signals without extensive mods and a 'puter *or* a built-to-purpose rcvr the way I understand it. So as has usually been the case with the introduction of innovations in recent decades the commercials are already there at least on an experimental basis. It'll be interesting to see how well DRM flies, it just might work well for all I know but it's gotta survive the costs then the crud in the swl bands.

To get anything like DRM running in the ham bands it'll have to impress large numbers of hams enough on a performance basis to convince them (us) to adopt a new mode which is completely incompatible with the existing equipment hams use. Historically that trick has never worked.

> And to answer your question: Yes, you can put a voice signal (digitized)
> through a 500 Hz pass band. You just need a modulation scheme meant for that
> application, and the tradeoff will come in the form of needing a really good
> S/N and/or more than real-time to send the message.

A requirement to have very good S/N ratios in the HF ham bands is two strikes against a mode like this right out of the box. Dealing with the realtime issue is probably survivable.

I noted that you didn't really provide an answer to the question. A
comment was made about wide band modes. You responded with something
about PSK-31. Now you go into what Peter Martinez scaled. You haven't
address the comment on wide band modes.

I snipped the rest of your lecture since it didn't really deal with what
was asked.

Sure sounded like it to me.

> Over the 100 year history of ham radio
>maybe we've had what, pick a number, twenty kids under ten licensed?

I dunno. Maybe a couple hundred.

Look up a book called "Radio Rescue" by Lynne Barasch. Ten year old ham in
1923. True story.

>Versus around 1.5 million total U.S. hams?

Where'd you get a number that big? Prolly more like a million.

>Those kids have all been
>statistical anomalies pure and simple and have not had, nor will they
>have any influence at all on the course of the service in the future.
>
Not my point at all.

Point is that two of things working against ham radio today are lack
of youngsters and the tendency of some people to avoid hobbies the whole
family can't enjoy. Family of hams beats both those trends.

>> > Any of Mattie's young peers, without the support of a licensed parent,
>> > and the material support of a functional station in their home, would

>
'zactly. One of the biggest parental jobs is to get 'em interested in
something - anything - that's relatively harmless compared to what's out
there. Which they may get involved in anyway, but it beats taking the
hands off approach.

With some kids, a lot of support is needed. With others, the best way to kill
the kid's interest is to get involved too much.

>> > About the best face I can put on this is that young Mattie now has

kewl.....what was their power/range?

when I lived in Austin, we had the UT TV station (out of the
Communications Building) - its range was literally about 1/2 mile. My
friend lived about 10-city blocks from that building, and with rabbit
ears it was "watchable", but not with some video noise.

where I live now we have a 200 watt church station - seems its range is
about the same (1/2 mile).

I'd Imagine that pirate TV was probably less than 200 watts, so we'd be talking of a range of literally 4-5 city blocks?

I'd love to playback a shitload of DiVx video through a 120 Gig harddrive.

obscure stuff - like

chef, prisoner, brother cadfeal, the velt, lightsout.....etc.
there is alot of good TV shows which are not played on any cable channel that I'm aware of. If they are, they are not commonly aired.

peace.

oh ya.................that Austin station was no channal 9. There was another low power called KVI (i think - been awhile) channel 13. It used to be America One network and had limited range, maybe 1-2 miles. It was later bought by channel 7 (i've forgotten the call letters of this CBS affiliate) and changed to UPN.

oh ya ....we have an America One in a town north of me - it is low power with a range of at most 1-mile.

>Is it even possible to compress digitized voice down to 500Hz?

In theory, yes. There are tradeoffs, of course.

And practice is another thing entirely.

>Violation of Shannon's Law?

Not at all. But Shannon forces tradeoffs.

Here's one way to do it....

You're familar with PSK-31, which at the most basic level is a form of amplitude and phase shift keying. (the amplitude part involves carefully shutting off the carrier during phase transitions to reduce the bandwidth).

Anyway, with the basic PSK-31 signal you get a certain number of bits in a 31.5 Hz wide channel. If you use BPSK, the bit rate is the same as the baud rate. BPSK (binary phase shift keying) simply means the system recognizes two phase states - 0 and 180 degrees.

But by adding more phase states, we can send more bits in the same bandwidth. With four states (0, 90, 180, 270), we can send twice as many bits in the same bandwidth. You can theoretically just keep on adding phase states and send more bits.

Now since one PSK-31 signal needs only 31.5 Hz, you could in theory fit about 16 of them in a 500 Hz channel, giving you 16 times as many bits.

Of course anybody who's done real engineering knows that there's always a tradeoff. And the tradeoff is signal to noise ratio. In the case of PSK, adding phase states increases the susceptibility to any phase jitter or noise in the system - receiver, transmitter or path, be it wire or radio or fiber.

From the introduction of the no-code Tech until April of 2000, the no-code Technician license required passing two tests: the Novice written and the Technician written.

Go for it, big daddy dave. Ain't no cats on your hot tin roof.

I left active duty in 1956, moved to southern California in 1956, worked
IN radio-electronics in the aerospace industries out here. I'm still
working IN it but not at regular hours. Better than 40 hours a week
from then to now. Even did a severe major shift to go from illustration
to electronics engineering. Kept up a hobby in electronics at home
all that time. Even authored articles on electronics and ham radio
as a professional writer in spare time. Became senior staff
engineer at several large electronics corporations.

Howaboutthat? Does that "show enough interest?" I'd say making a
career out of an "interest" ought to prove something to anyone with
more than four brain cells. Nope. Not enough to mighty big dave.
To him (bless his 4-synapse grey matter) I'd have to regress and Learn
To Beep Morse and become an amatoor hum wid a reel lisense.

Geez, snarly dave, those electroshock treatments do take away
some of your smarts. Was the gunnery nurse in attendance?
Did he dance well? Who lead?

Never tried, snarly dave.

I passed my First Phone exam on the first try in Chicago at an FCC
field office in March 1956. Never looked back.

Now Larrah, the self-professed paragon of determination and moral
virtue, once bragged and carried on that his "summa cum laude"
standings in post-service college would get him any top spot job
in human resources after graduation. He now drives a bus.

Quod Erat Demonstrandum.

>Please continue your civil debate on morse code elimination.

As soon as you show the way, snarly dave.

So far you haven't exhibited much civility in that regard.

But, I am always optimistic and hope for the best...

Keep the morse faith. Beep.

In big-time HF, not a heckuva lot. There's very little left of the BIG
TIME HF communications efforts of a half century ago.

Armature radio deeecksing is "big time?" Nope. Not a drop in a
bit bucket compared to the communications carriers of not too long
ago. You'd LOVE to think it was "big time" but that is only how it
is written up in QST.

The only radio service still requiring morse code for communications
is amatoor radio. All the other radio services either gave up on it or
never considered it in the first place.

>> I was IN worldwide communications on HF over a half century ago.
>> At the time I liked it fine...even felt honored to be able to serve my

>
>...and because you didn't use morse, no one used it at the time or since.
>A number of us have used morse professionally and as radio amateurs in
>the decades after you had your "big-time".

Nope, snarly dave, the Army gave up on morse code for fixed-point
to fixed-point long-distance communications back in 1948, before my
service time. The Navy's long-haul fixed comms were the same way.
Same for the USAF although all the branches maintained some
morse code proficiency requirements and circuits until the early 70s
(rather small efforts). I'm sure Department of State was able to put

some of that obsolete military equipment to good use after it had a
life in active military duty.

>> Tens of thousands of skilled radio operators worldwide have used
>> worldwide communications effectively for decades without ever

>> over a half century.
>
>Tens of thousands of skilled radio ops worldwide *have* used morse
>effectively for worldwide communications after your day in the sun.
>Tens of thousands still do so.

Sorry, snarly dave, that's just your Article of Faith. You WANT to
think that is true but it's far in the past and never the numbers you
can prove. The PROOF is seeing what radio circuits use what on
HF...even when HF was a mainstay of communications carriers.

Don't let me stop your rationale invention. Improve the state of the
rationale art, innovate, improvise, adapt...

>> The U.S. military did not require any morsemanship to use the very
>> first handheld transceivers (on HF) for communications in 1940. That's
>> 64 years ago. Neither did they require any morsemanship to use the
>> first backpack radio (on VHF) in 1943. That's 61 years ago.
>
>Yet the military continued to use morse. What's your point?

EVOLUTION, you throwback to failed Darwinism.

Do you need a DayGlo billboard to outline it? WAKE UP.

The state of the art of radio communications long since bypassed
morsemanship skills.

It doesn't take rocket science intellect to use, operate ANY radio.

Morsemanship needs only repetitive Pavlovian training to become
a wetware modem...provided the basic aptitude is present.

NO modern communications carrier uses any morse code. Such
skills went byebye some time ago.

Teletype Corporation didn't make a half million teleprinters during
their corporate existance to copy morse code.

>The hundreds of thousands of amateur radio ops work DX, engage in
>radiosport, check into nets or engage in public service communications
>without touching a PLMRS transceiver.

Wow! Really?!?

No hams work in a business that has a Public Land Mobile Radio
Services radio? No hams work on railroads or in heavy trucking or
vehicle road service trucks? No hams in construction of large
buildings or engaged in HVAC or plumbing maintenance of same?

No hams are policemen or firemen or paramedics? No hams are in
the broadcast industry using remote links controlled through PLMRS
comms?

They are all on HF engaging in "radiosport" and net checking to
advance the state of the art of radio and morsemanship?

Now all that "radiosport" and "net checking" is fun and recreational
and enjoyed by many but it is hardly any sort of technical
advancement or honing skills useful in case of national need.

Your mileage on the newsgroup rageometer will, of course, vary.

Foaming at the mouth is normal, sarly dave, but don't forget to
brush after every meal.

>I see. "Broadband" means "broad bandwidth". You could have knocked me
>over with a feather when I read your words. So to your way of thinking
>on "broadness", a morse communication at 5 wpm on 10 KHz could be
>considered "broadband"?

No. I'd say that 5 words per minute on 10 KHz could possibly be
interfering with USN submarine alert frequencies. Those are on VLF.
It's not nice to interfere with boomers or sharks, big daddy dave.
Such wouldn't mean a "Riley" knocking on your door, but some very
serious "attitude" folks carrying heavy artillery.

Now show us some REAL innovations and inventions done by hams
over the last 50 years or so concerning RADIO. Other than Dan
Tayloe that I've already mentioned several times.

Or just continue to make nasty in here on the UnBelievers who
don't worship at the shrine of St. Hiram.

Many novice setups were built out of junked tube TV parts and modified
AM radio
receivers. QST published many articles about such. The designs were
such that you
could have something that worked without causing a lot of TVI. Designs
that were
not fussy about adjustments and component selection. Which is what you
want in
manufacturing, something that can be thrown together and always work.

Reminds me of the story about some little old lady sueing the trolley
company
because they caused a lightning bolt to run thru her bedroom late at night.
What probably happened was the trolley pole comming off the wire causing
an arc to flash. She must have went nuts during a real thunderstorm....

We once had lightning take out a tall tree in the back yard late one night.
Wooden shrapnel all over the back yard; good thing nobody was outside
when that happened. SOme of the light bulbs that were on blew out.
This was back in the early 60's, before line operated solid state
equipment was at all common. The tube stuff (all of which was off)
didn't mind.

Back in 1977 someone put together a pirate TV station in Syracuse NY on
channel 7.
The story actually made it into the New York Times, though not front page.
The Syracuse student paper mentioned that they heard that it was built using
parts from an old gautar amp (actually reasonable if it was a tube rig,
the power
supply is already there, and the output tube could operate on VHF). It was
on for one weekend only. The nearest FCC field office was 150 miles
away, and
when Monday rolled around the pirates were gone. Syracuse was a town so
small
they had only 3 VHF and 1 UHF TV channel, all as conservitive as
anything you'd
find in the Bible Belt. 1977 was the dawn of the VCR, and they played
stuff like
porno and Star Trek episodes.

What has that to do with his amateur radio license and why is it of
concern to you?

> Quod Erat Demonstrandum.

You bragged *four* years ago that you'd get "an Extra right out of the
box". You still have not even the most basic amateur radio license.

Q.E.D.

> >Please continue your civil debate on morse code elimination.
> >
> As soon as you show the way, snarly dave.

Be sure to make tape recordings of such before and after. Audio of the
rig output and
video of the S meter on the rig, like what they did at the ARRL web site.
BPL may have a distinctive sound pattern that ordinary interference
doesn't have.

I got caught reading a text on electricity. Book was open to the page about
polyphase induction motors, and I had to explain the meaning of a rotating
magnetic field and a squirrel cage rotor to the teacher. In 5th grade.

>

'zactly.

Frankly, it was kinda surreal reading Larry's diatribe about that family. We've
been subject to years of
Dr.-Laura-points-of-light-republican-cloth-coat-family- values lectures, and
then a family actually does ham radio together and the kid gets no credit.
Bleah.

Of course. And they miss the fact that their target audience needs simple,
not complex. The developed world will listen to them via the 'net anyway.

>To get anything like DRM running in the ham bands it'll have to

Bingo. What's needed is an innovation in digivoice like PSK-31 was
to RTTY.
>

Yup. Which is why we haven't seen it yet. The commercial/military folks
have a different game to play, of course.

> In big-time HF, not a heckuva lot. There's very little left of the BIG
> TIME HF communications efforts of a half century ago.

There's plenty of BIG-TIME HF communications, Leonard. You simply
aren't involved in it any more than you are amateur radio and it didn't
happen fifty years ago.

> Armature radio deeecksing is "big time?" Nope. Not a drop in a
> bit bucket compared to the communications carriers of not too long
> ago. You'd LOVE to think it was "big time" but that is only how it
> is written up in QST.

Sure, Leonard. Compared with what is available to you, it is plenty
big-time, especially if done right--big towers, big antennas, all the
power the law allows. I don't have to read about it, I'm able to
participate.

> The only radio service still requiring morse code for communications
> is amatoor radio. All the other radio services either gave up on it or
> never considered it in the first place.

I really don't care. Morse is alive and well in amateur radio. I don't
use it as my sole operating mode anyway.

> >> I was IN worldwide communications on HF over a half century ago.

> their corporate existance to copy morse code.

Vibroplex didn't make all those paddles and bugs to copy Baudot. I
frequently use Baudot though but I don't have equipment manufactured by
Teletype or Kleinschmidt. Radio amateurs still use morse regularly.
What the commercials do worries me not. I'm enjoying amateur radio as
an avocation, not as a business.

>you're done it's not your frequency anymore),

All comes under rules and regs - basic "keep out of trouble" stuff.

> simple emergency traffic operations.

Sure - but how do you test for it?

All except antennas above comes under "keep out of trouble"

>>>>>>Current Element 2 is very VHF/UHF centric, and so are current Tech
>>>>>>Plus privs. The goal seems to be to strike more of a balance between
>>>>>>above and below 30 MHz privileges.

>Aside from propagation, there's really little difference from HF and
>VHF/UHF.

Well, propagation is kinda why we're on the air.

But there are other differences, like:

- the amount of available spectrum (6 meters has 250 more kHz than all 9 amateur HF/MF bands put together)

- how many people over how wide an area can hear you

- how easy it is to homebrew a simple rig that can be work stations thousands of miles away.

>Questions like "Is 80m likely to have good propagation for DX during the
>daytime?" don't really address issues of safety and interference to other
>services.

Agreed!

>A beginner
>will soon learn on the air what times and bands make sense for DX
>operations.
>
Some will, others will remain clueless for years.

One difference I note between many of today's hams and those of yesteryear is that
in the past it seemed to me that almost all new hams had a lot of experience *listening*
to the ham bands before they got their licenses and went on the air on the ham bands.
In my case, I first heard hams while SWLing, and learned the code by listening to hams
use it on the air. Plus read a lot of books on the subject. So I was no stranger to the
bands I used when I got the license and built a transmitter.

Today it seems that many hams study the book and get the license, then set about getting
a rig.

>>>>>So change the question pool, but don't dumb it down

Exactly. I can write you an essay question test that is super easy and a multiple
choice test that is super hard - on the same material.

>>How much is it reasonable to expect a newcomer to learn in order to be

>>>>>>receiving.

>>>>>Won't happen

>>>>Probably not, but it's still a good idea.

>Why, no otehr service uses code anymore, and more modern data
>modes now exist.

Because hams *do* use code today. A ham license is for operating in
the ham bands, not for using other services.

>Yes, they require more advanced equipment, but
>modern equipment is much more reliable than the vacuum tube stuff
>we had 50 years ago.

Does that mean we don't need a theory test either?

> NASA's JPL doesn't use Morse code with
>the Mars probes.

The track record of failed Mars probes is pretty long, though. And
NASA has a somewhat bigger budget than the average ham...

>And that's really hard DX to do.

Not with the resources NASA and JPL have available.

(why do they call it the *Jet* Propulsion Lab, anyway? They all
use rockets, don't they?)

And if you're going to use that argument, consider that there are
no skilled radio operators on those probes either.

Other services haven't just done away with using Morse - they've
done away with the very *idea* of a "radio operator". Skills not
needed or wanted. You say it still takes skill to know what band
to use at a certain time of day to make a certain contact, regardless
of mode? Look at ALE - does all that for you. No operator
needed. Just a "user".

>>>>>>>Moreover, it can be now,
>>>>>>>since it has not been required by the ITU for the last six months.

>>>>>>FCC will most probably just drop it completely.

>>>>>I think they will too

>>>>Unfortunately

>What does the FCC get out of requiring code, now that the treaty doesn't
>require it anymore?

That's probably the key question. Which is kinda sad, because it used to
be "what is best for the amateur radio service" not "what does FCC get
out of it".

Between BPL, the flap over that popstar using the F word and not being fined
and
the Mr. Powell going nuts over a "wardrobe malfunction", I sometimes wonder....

>Maybe designate some subbands for new and experimental modes as
>primary, and allow older modes on a secondary basis. That is, you
>have to accept interference from them, and not cause them interference.

That's what K0HB, me, and others said to FCC in response to ARRL's "novice band
refarming" proposal. Reuse the Novice subbands as experimental sandboxes. Use
any new digimode you want, as long as it's documented and fits in the subband.

>And encourage new methods of modulating the RF carrier directly
>instead of say 2m packet where everyone just injected the modem signal
>into their FM voice mode rigs. Not efficient.

Actually it was very efficient from the standpoint that you didn't need a new rig. Almost any old 2m rig would do.

And that's the Achilles' heel - whether or not a new mode means building a new rig.

>>>>>>>>Old Novice subbands replaced by additional CW/data

>Maybe we might want some Morse code beginner subbands where new users
>can feel comfortable operating and not get blown away by experts.

No real expert blows away beginners.

I've worked lots of beginners on 40 meters between 7025 and 7050.

>As an

Now that you've started it, here is a little demonstration:

Go to www.google.com . Go to the image search. Search on Janet Jackson. Observe the pictures that pop up.

Now try to reconcile what you have just seen with CBS and MTV and the NFL' denial of any knowledge of the ugly little stunt. (yes it was ugly - that creepy outfit she wore looked like some 1970's lingerie from behind the iron curtain, and what the heck was that ugly thing on her breast? - shudder!)

They knew! And the halftime show, which used to be the way for the NFL to get women that were not interested in football to watch the show has now changed. My guess is that there will be plenty of men watching the halftime show next year.

Even if they didn't know this was going to happen, the people they hired to do the show, MTV, is pretty steeped in sleaze. Note that MTV is owned by the same company that owns CBS. So ignorance of the act would be admission of stupidity.

Maybe they'll have porn stars next year.

And lest we forget, Kid Rock comes out in a desecrated US Flag with a hole cut in the middle. Pretty damn despicable! Is this what the superbowl is about? I can only assume that the NFL approves of this kind of disrespectful behavior, and if we watch the trash they spew, we do as well!

Aw com'on. Dan's a lot of fun, and always has been. He was great
entertainment back in the ol' 14.313 Radio Wars days, and he is definitely a
stickler for keeping ham radio "real". Ignore him? Please... no good ham
ever "goes away" because he's ignored. Where's the fun in that? Not that
ol' Dr. Doozie was ever ignored, but doggone it, he's back on 3865! HOW
'BOUT THAT DUB-YA ONE TIME?

...can't we all just have a little fun?

Hehe, I can't even imagine being on the air right after FD ends. I go
home, have a bite to eat, and go "nappy-byes" until its time for "The
Simpsons" to come on. I suppose that might be working myself into the
ground, but its for the fun of FD and the camaraderie.

Lennie:

Yup -- there are many who are a lot better. Sorry, but when we're talking about amateur radio operators, you're not one of them!

Literally.

> Are you electronically connected here and formerly on FIDONET
> BECAUSE no one could "come close to you?"

Uh, no -- mainly because I have a computer with a modem! I'm sort of surprised that you didn't know how that worked!

> Try regular bathing. It might help.

Bathing my computers? Now that you mention it, they are a bit dusty... but I doubt that tossing them into the bathtub would do them any good.

(Oooops, guess I just left you an opening you can drive a Kenworth with a 53' trailer through! Oh, well -- you need all the help you can get!)

>I noted that you didn't really provide an answer to the question.

The question was ambiguous and did not define "wide."

Your name isn't "Kelly," sweetums. Ya gotta live near philly, eat hoagies and buy "gaz" for da car in order to impersonate Kelly.

Got that?

>A comment was made about wide band modes. You responded with something >about PSK-31. Now you go into what Peter Martinez scaled.

You wouldn't know Martinez if he had a leather suit instead of scales.

Hello? Ever hear of Shannon's Law and the relationship of data rate versus bandwidth? It's fairly simple math and proportional. That

means it can be SCALED as in relationship of numbers.

>You haven't address the comment on wide band modes.

You want an address? [I'm not available...]

How about the Gettysburg Address? "Four score and seven something."

>I snipped the rest of your lecture since it didn't really deal with what
>was asked.

Good, then you will quit trying to impersonate Kelly.

The foam at the mouth must have been something...you sent the same
thing to me in private mail. I snipped that. It was lower than the usual
spam in private mail.

>
>Okay, the military continued to use morse long after the introduction of
>the equipement you mentioned. This demonstrates EVOLUTION in what way?

"Equipement?" :-)

The U.S. military does not use any morse code for communications now.
It quit doing so several years ago. Many several years in fact.

No communications carrier service in the USA uses any morse code.
Railroads don't use it. Shipping on land doesn't use it. Businesses
don't use it, even if they are making-selling morse code devices.

Tens of thousands of olde-tyme hammes use morse code. Amateurs.

Are they thinking they are "advancing the state of the radio art" by
doing so? Are they "pioneering the airways" as was done in the 20s
and 30s? Or don't they know any better way to communicate?

>> The state of the art of radio communications long since bypassed
>> morsemanship skills.
>>
>> It doesn't take rocket science intellect to use, operate ANY radio.
>
>I'd love the opportunity to sit you down in front of my Orion for a few
>hours...

Oh wow! Snarly dave is going to overwhem me with complicated
knobs and switches and instructions on a box of electronics!

Snarly dave, you important, electronically impotent sot, ALL
electronics and radio systems ARE complicated, complex, and
must be some kind of arcane magic to you. I know because I've
seen the same self-importancy demonstrated before, even once
about a system I helped design and develop. :-)

Yeah, snarly dave, I'll "sit down in front of your orion." If and only
if you sit down in front of any radio system I've used in the last
decade. Can you afford air fare and lodging to Pasadena? I can
show you some of the JPL Deep Space Network...after the Rover
missions, please, they are a bit busy right now. You can't sit down
in the avionics compartments of an F-18 or F-16 but you can get an
idea, maybe a glimmering of what those are about...except you'll
quickly get snowed even with a Have Quick. I can get you into
KNBC and the master control in Burbank; they have tours for that
sort of thing, no problem. You've never "ridden" a modern TV control
board, have you? I can get a Novice license holder to show you how
it all works...Tom won two Emmys for TV direction, different years.

All of that involves RADIO, snarly dave. None of it is amateur. It is
all very professional/commercial. You will get snowed in mentally
worse than the northeast has ever gotten.

But...you ARE TESTED FOR MORSE CODE AND AN EXTRA!

You can afford an expensive radio toy to pursue your "radiosport."
And, of course, tell everyone about and go nyah, nyah, "you ain't
as good as dave!"

If YOU had to test for morse code then everyone else MUST.

It's the law. That law can never be changed, right?

>

>
>Vibroplex didn't make all those paddles and bugs to copy Baudot. I
>frequently use Baudot though but I don't have equipment manufactured by
>Teletype or Kleinschmidt. Radio amateurs still use morse regularly.
>What the commercials do worries me not. I'm enjoying amateur radio as
>an avocation, not as a business.

Most of Teletype Corporation's hundreds of thousands of Teletypes
didn't use "Baudot" as in the old 5-level code. They used the 8-level

ASCII. The half-millionth Teletype was on display in gold plating at many electronics industry trade shows in the 1980s. Too bad you couldn't have seen one. But, you are an amateur and not in the business. It would make your Vibroplex just vibrate all over! :-)

You are "enjoying amateur radio" so that you can make like a big shot (with the O stretched vertically) and snarl at those who don't care to take any code test...or those who worked in BIG HF comms before your time...or those who won't kneel down and kiss your asterisk. Or all of the above.

Nice not talking to you, snarly dave. Have fun "on the bands." All below 30 MHz, that is, in tiny little bands below 10 meters.

>>
>Then learning the 5 wpm and getting the extra should be a walk in the park
then.
>It took me about a month to learn 5 wpm and I'm no good at such motor skills.

Gosh, olde-tymer, I've walked in many fine parks in my time but not
a single one of them required any morse code proficiency to walk.

Never saw any "Keep Off The Code Keys" signs either.

Birdies in the trees chirped "tweet, tweet," not "beep, beep."

You must have lived in different cities than I.

"Motor skills" I learned as a teenager, got my first drivers license
without having to test for morse code. In Illinois...obviously a
regressive state, right? :-)

Psycho-motor skill I learned in middle school (we called it
"junior high school" back then before educational PC) was typing
at tested maximum of 60 WPM. On typewriters that had no key
markings. :-)

None in the typing class had to copy any morse code. More's
the pity, right? I later cruised on 60 WPM Teletypes just dandy.

Now, let's concentrate on WHY there's still a morse code test for
an AMATEUR radio license...and WHY it must remain law forever
and ever. Or, at least until the last PCTA has their code key
forcibly removed from their cold, dead fingers.

Is morse code not so wonderful that the feds have to keep the
morse test in law so that cute little seven-year-olds can have
radio playmates? Or forty-seven-year-olds and older?

Ever wonder why morse code is the SECOND most used mode
on HF, a distant second behind voice? All the HF hams had to
test for code but so few continued to use it. I guess it must not be
so wonderful, so popular after all.

Morse code gets through when everything else will...

TV TX power is not cheap.

It's all in the antenna and HAAT.

Back in the 70's a London AM pirate station dabbled with TV and played with a couple of watts and a simple colour bar generator to feed it. Using a simple yagi antenna atop a local hill they were received around 15 miles away albeit line of sight.

Good quality antennas such as panels are not cheap and in fact for a low power station, say up to 10 watts the antenna system costs more than the transmitter.

However, for an economical vertically polarised antenna at low power one can get away with a wideband co-linear which is only a few hundred dollars.

You do need good bandwidth.

Right you are, Dee! I should have written "just one *type* of test".

Either way, the principle is the same - take two written tests on related
material, or one written and one code test.

How is it as bad or worse? I think it's much better!

First off, it does not widen the 'phone bands anywhere near as much as the KQ6XA plan. Nor does it decrease the Extra segments.

Second, the 200/500/2700 Hz rules are for a *voluntary bandplan*, not FCC regs.

Third, it actually acknowledges that hams use modes like CW and Baudot RTTY.

You've forgotten the early 80s "Thameside TV" broadcasts over one Christmas.
They were at quite high power (erp of a few kilowatts) from Crystal Palace.
CP was chosen because it's very high, and there are already other TV
transmitters up there - so all the rooftop yagis point at that area! It
was possible to get a P5 picture over much of west London!

Head on over to Dan's new hang out "alt.ham-radio.vhf-uhf", and you'll
see why. Everyday we have to hear how he is God's gift to Amateur
Radio, yet he has more skeletons in his closet than anyone. People
that live in glass houses, shouldn't throw stones.

Oh, I see your confusion. You thought I meant *other than on the ham
bands*!

> They are all on HF engaging in "radiosport" and net checking to
> advance the state of the art of radio and morsemanship?

Did I write "all" or did you just gather it from the ether?

> Now all that "radiosport" and "net checking" is fun and recreational
> and enjoyed by many but it is hardly any sort of technical
> advancement or honing skills useful in case of national need.

How do you know much about it--by having someone you know tell you of
it? By reading about it on the web? By browsing through the pages of
QST at your local library? Were you under the impression that hams are
mandated to participate in technical advancement? Are there no
operational skills needed by the nation?

I know in which part of the spectrum 10 KHz is located. That you didn't care to answer the question is noted. We'll just accept your definition of "broadband" as, well....broadband.

> Now show us some REAL innovations and inventions done by hams
> over the last 50 years or so concerning RADIO. Other than Dan
> Tayloe that I've already mentioned several times.

No radio amateur anywhere has done anything if you haven't known about it.
It can't have happened. Nothing you have no knowledge of can possibly have happened. You are the ONLY PROFESSIONAL in radio. *snicker*

> Or just continue to make nasty in here on the UnBelievers who
> don't worship at the shrine of St. Hiram.

Worship? You aren't even baptised as a licensed ham, Leonard. You have naught to do with amateur radio. You're among the unwashed.

Several decades of declared interest in amateur radio + over seven years of windy, condescending posts here + four years of inaction on your "Extra right out of the box" = Leonard H. Anderson, potential radio amateur :-)

Via the vanity callsign program, yes. This assumes nobody else holds it, which
seems unlikely in your case. But you need to get a ham license first. The FCC
will assign you some random callsign first. Then you can trade that in for the
vanity callsign. It does cost something like $20 for every ten years thereafter
(the FCC marks your license as vanity, so they know to charge money again).

Extras shouldn't beg. That's unseemly.

ANYONE'S "in a position to know" you don't know, snarly dave.

Four neurons can't hold more than 16 bits of data.

>> Hello? Ever hear of Shannon's Law and the relationship of data rate
>> versus bandwidth? It's fairly simple math and proportional. That
>> means it can be SCALED as in relationship of numbers.
>
>That is simply more misdirection on your part.

Hokay...the entire rest of the radio world is familiar with Shannon's
Law and the mathematical relationship of bandwidth, noise,
information rate, and probability of error. They agree it is correct.

But, as an amateur you disagree, calling it "misdirection."

You need more than four neurons, senior alzheimer. Download some
from Ten-Tec and improve your cognitive capability.

>Tell us about the new wideband modes.

Why? You are an amateur keeping alive the Living Museum of
Archaic Radio and imagining you are in a Star Trek universe with
matter transporters.

On-off carrier keying is the limit of your profound radio knowledge.

We can't disappoint you with reality of the rest of the radio world.
You are a proud and noble amateur, better than all professionals.

Hail Ceasar and all the other salads...

>You don't seem to be able to

Why are you asking?

You are an Extra. You know Everything because you are Qualified
by a federal agency, complete with pretty little certificate (suitable
for framing)!

>I know in which part of the spectrum 10 KHz is located.

Did you download that firmware fact from Ten-Tec too?

>No radio amateur anywhere has done anything if you haven't known about it.

Awwww...now you are acting all peevish. Tsk, tsk, tsk.

>Worship? You aren't even baptised as a licensed ham, Leonard.

Tsk, tsk, tsk, pope dave the furst become a religious sellout?

The Church doesn't issue ham licenses, snarly dave.

The FDA grades ham.

>You have naught to do with amateur radio.

I haven't gotten around to tuning in the naught, snarly dave.

Nothing to listen to in the naught.

>You're among the unwashed.

Untrue! I just downloaded an extra shower from Ten-Tec's very firm
ware download section. Was inexpensive economy model but was
complete with 100 gallons of hot water. Soap extra.

Took a long time to download. I would need DSL for the most
expensive model's download. Is that the firm ware download you
got, snarly dave? Come clean, now...

>Several decades of declared interest in amateur radio + over seven years
>of windy, condescending posts here + four years of inaction on your
>"Extra right out of the box" = Leonard H. Anderson, potential radio
>amateur :-)

Didn't you forget my claim that I was going to invent anti-gravity?

I'm still working on that one, but something's holding me down...

Now sit down in front of your orion, snarly dave. Amaze yourself.

We are all amazed at you. Of you. On you. Whatever...

>exposure to amateur radio.

...and you are still undeveloped.

>Nope. Nothing about your obtaining an amateur radio license here.

Oh? Is this a requirement to be in the electronics industry?

Strange, isn't it, not one single personnel person (that's "human resources" profession to bus drivers) said anything about needing any amateur radio license to work in electronics or aerospace.

Where is "here," snarly dave?

In your imagination? In your fantasy? On Fantasy Island waiting for da blane?

>No, nothing about your having obtained an amateur radio license here.

Now now, docktah no, you are getting churlish and unseemly again.

Did you download your definition of "interest in radio" from Ten-Tec, too? Right...along with the FIRM ware, the shower, and your undeveloped exposures.

>> Howaboutthat? Does that "show enough interest?"
>
>In obtaining an amateur radio license? Why, no, none at all.

No, no, no, sweetums, you equated INTEREST IN RADIO to
GETTING A HAM LICENSE plus adding "learning morse code."

Try to keep those four neurons in line.

>You haven't Beeped Morse nor have you Passed Any Written Exam. You've
>taken no action on your declared interest.

I have NO interest, declared or otherwise, on "beeping morse," bleeping
dave. Never claimed otherwise.

Is that a requirement in your SS view of amateur radio?

I passed four written exams at an FCC field office in Chicago, 1956.
I passed all kinds of college exams after that, a California driver's
license written exam among others (despite a non-interest in
becoming a professional driver).

Does one have to Post Bans on "interest in radio?" Must be so at
the Church of St. Hiram.

Sorry deacon dave, I don't worship at that church.

>Who did what? My smarts are fine, Len.

Your four neurons are indeed fine and firing in sequence.

Dial up Ten-Tec and download some more neuron firmware.
Four isn't enough. Upgrade!

>I wrote about getting into amateur radio.

Nah, you scribbled nastygrams about "getting an amateur radio license
IN ORDER TO SHOW INTEREST IN RADIO."

>Your response didn't address that, did it?

Here's an official address: 445 12th St. SW, Washington, D.C., 20554

I've addressed several things to that address.

Are you still wearing address?

Now THAT brought back memories - rolling 620 Verichrome Pan film into the developing tank under that @#$%^ dark green safelight....mixing the developer and getting it to exactly 68 degrees F.......another hobby, another time - long ago.

D-76 is good for B&W film only, though. These discussions are far too colourful for anything less than Ektachrome.....definitely Kodak moments, though!

Why, Len, just the other day I heard The Amateur Formerly Known As
(TAFKA) Rev. Jim say that the Morse Code test was a disincentive to
use CW on HF.

Maybe the earth has reversed polarity!

Or maybe he just got his tie stuck in his zipper.

No, its probably WB2PDW, Vincent Diak, he is a world class jammer. Been
on for 20 years. His thing now is to fire up super amplifier and play
computer generated tones on it.

I nailed his arse the other night on 20 meters and sicked the feds on him.
So now he has the arse and is playing here.

Nothing new under the sun.

But thanks for the 'reminder'

Probably tied up with work and work related travel.

> Haven't heard from him since he had the
> change of heart regarding the testing.

Everyone's allowed to change their minds, Mike. Even when they
say "never"....

Here's a prediction for you:

Hopefully BPL will not completely trash the HF spectrum - if that
garbage takes over, all bets are off. Assuming it is defeated or at
least contained:

There will be proposals and more proposals. FCC will someday do
another NPRM,
there will be a lot of comments, lots of arguing, and then eventually
FCC will
do another R&O which will consist mostly of what's easiest for FCC to
implement.
At the rate they're going, late 2005 before the rules change. (Yes, I
have't forgotten The Pool)

They'll dump Element 1, simplify the entry level test even more,
reshuffle
some other regs, etc., regardless of what the majority wants, what
arguments
are given pro and con, etc. Free upgrades? Maybe.

We'll see a surge of new hams and a surge of upgrades - for a while.
But not
much will actually change, because they're not addressing the real
problems
like CC&Rs, lack of publicity, lifestyle changes, etc.

You watch and see if I'm right.

Meanwhile some of us will have been having a lot of fun with ham
radio. I know I have, and will continue to do so.

It should be apparent to you, Leonard. They're discussing matters
dealing with amateur radio. You've delivered bushels of sermons here
but you have zip to do with amateur radio. Instead, you entertain us
with tales of how the commercials do things and of your military
exploits of fifty years back.

Your claims of being here only to engage in civil debate on morse
testing elimination ring very hollow.

Entertain us with your credentials once again, won't you, Len. Then
tell us about that "Extra right out of the box". After more than seven
years of posting your diatribes in an amateur radio newsgroup, you're no
closer to obtaining even the most basic no-code amateur radio license.

Oh yes! But they have to face the consequenses of changing their mind.
But there is some pretty severe damage to credibility when the change
involves basic principles.

That "Extra right out of the box" park requires it at the breakneck pace
of f i v e w o r d s p e r m i n u t e.

> Psycho-motor skill I learned in middle school (we called it
> "junior high school" back then before educational PC) was typing
> at tested maximum of 60 WPM. On typewriters that had no key
> markings. :-)

There's no typing test involved in the Amateur Extra. Just a morse test
of f i v e w o r d s p e r m i n u t e.

> Now, let's concentrate on WHY there's still a morse code test for
> an AMATEUR radio license...and WHY it must remain law forever
> and ever. Or, at least until the last PCTA has their code key
> forcibly removed from their cold, dead fingers.

At the rate you're progressing toward that Extra Class ticket, there
won't be any amateur radio license at all to pry from your cold, dead
fingers.

> Is morse code not so wonderful that the feds have to keep the
> morse test in law so that cute little seven-year-olds can have
> radio playmates? Or forty-seven-year-olds and older?

It still gets you that mere children can obtain that which you covet,
doesn't it?

> Ever wonder why morse code is the SECOND most used mode
> on HF, a distant second behind voice? All the HF hams had to
> test for code but so few continued to use it.

Let's see.....hmmm....It is probably because the overwhelming majority
can already talk? Operating on SSB would seem to be as easy
as...talking.

> I guess it must not be
> so wonderful, so popular after all.

...but you'll have to continue to rely upon second-hand information.

[expletive deleted]

>despicable!

I agree 100%.

When the halftime show started I changed the channel. Flipped back at one point and saw "Kid", flipped back to something else. Missed JJ - no big loss.

Note that the flap over her "wardrobe malfunction" has deflected attention from that flag desecration.

>Is this what the
>superbowl is about? I can only assume that the NFL approves of this kind
>of disrespectful behavior, and if we watch the trash they spew, we do as
>well!

I think it's evidence of a basic law of entertainment physics: "conservation of goodstuff". IOW there's only so much good programming. Some years back, the superbowl consisted mostly of rather unexciting games but really good shows and commercials. Then the games got better and the shows and commercials worse.

It's not just the superbowl - most of what's on broadcast TV is JUNK. Pure and simple. If some people in the LA area are offended - tough.

The irony of the situation is that the people who are really responsible won't be fined, but the stations who simply carried the network feed will be.

OK... forgive me if this is the wrong place for this, and/or it's been asked
before...

I used to have a novice class license back in the early seventies that I let
run out. I'm interested in becoming a ham again, and I wondered if I could
still get my old callsign back.

TNX,

-S

Once you become licensed again, you can apply for your old call under the
vanity program. If no one else has it, you would be able to get it assigned
to you. But first you must get a current license and call.

That would be cool...unfortunately, it would also be a price buster, as I'm not aware of anything remotely inexpensive that would let you transmit ATSC digital television in SD -- let alone in high definition.

Still, the nice thing is that it would take very little power since low powered digital signals can travel pretty well.

Actually, they don't travel as well as an analog signal.. In areas where
there is at least a viewable (albeit snowy and/or ghosty) analog signal,
there is no receivable digital signal at all. This is practical experience
in Portland, Oregon, where the analog and digital signals are coming from
~2000' HAAT..

If you don't care, why are you still haunting a newsgroup dealing with amateur radio? It is clear that you are not a radio amateur and that you are not, after all these years, "getting into amateur radio". Haunt some radio professionals, using the endearing manner you've displayed here and see how long they put up with your condesent. I worked professionally in radio and electronics. A number of us here have done

so or do so. What sets you apart is that you are a non-amateur who seems to get his jollies taking potshots at radio amateurs.

> You do NOT get to choose anything about what anyone is "supposed"

Get it straight, Len. This is an open newsgroup dealing with amateur radio. You are in no way involved with amateur radio. I am free to choose to respond to anything posted here and shall do so as the spirit moves me.

> Shave the head and learn to smile. That will make you more like

> What have you to do with anything? :-)

Let's see. Amateur radio newsgroup. I'm a radio amateur. Now, back to the question: What does your comment have to do with Larry's amateur radio license and of concern is his job to you? It seems to be karma that forces you to live up to the N2EY profile of your likely actions.

> Tsk, tsk, tsk, snarly dave, all you seem to do is try to fight with
> others who don't bow down and kiss your asterisk.

Actually, old boy, you have quite the attitude toward radio amateurs. You're insulting, rude and immature. If you're waiting for radio amateurs to be impressed by your professional credentials, you're likely going to be disappointed.

> >> Quod Erat Demonstrandum.
> >
> >You bragged *four* years ago that you'd get "an Extra right out of the

It wasn't a casual, throwaway mention and your newsgroup statements of the past are here for a long, long time. If you wish to now retract your statement, I have no problem with that.

> I changed my mind, sweetums. Stuff it. :-)

I haven't changed my mind about you, Len. You're a victim of your own inertia and braggadocio. To twist a phrase: If you haven't done it, it is most certainly bragging. You haven't obtained a license and aren't likely to do so. Consider yourself stuffed.

> I saw the way you acted in here and didn't want to become a snarly

>
> But, as an amateur you disagree, calling it "misdirection."

Wrong, friendly old gent. As an amateur, I don't disagree with Shannon.
I disagree with your misdirection with talk of Shannon and scaling when
you were asked if PSK-31 is wideband.

> You need more than four neurons, senior alzheimer. Download some
> from Ten-Tec and improve your cognitive capability.

Ten-Tec has only firmware upgrades, Foghorn Lenhorn. They can't fix
your inability to answer a question.

> >Tell us about the new wideband modes.
>
> Why?

Because you were asked about them and responded with some drivel about
PSK-31.

> You are an amateur keeping alive the Living Museum of
> Archaic Radio and imagining you are in a Star Trek universe with
> matter transporters.

Yes, I'm a radio amateur. You got that much correct. Then you got
tangled up when you couldn't decide if I'm pursuing the past or the
future.

> On-off carrier keying is the limit of your profound radio knowledge.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or

In the expectation of receiving a straight answer. How do you know that
radiosport and public service work in amateur radio are fun? Who told
you?

> You are an Extra. You know Everything because you are Qualified
> by a federal agency, complete with pretty little certificate (suitable
> for framing)!

You're right about one part: I am an Amateur Extra, but I now about what
hams do because I am a part of it, an active participant. I don't get
my knowledge of amateur radio on a second-hand basis.

> >I know in which part of the spectrum 10 KHz is located.
>
> Did you download that firmware fact from Ten-Tec too?

No, Leonard. Ten-Tec has firmware upgrades available. Would you like
the definition of firmware again?

> >No radio amateur anywhere has done anything if you haven't known about it.

Haven't heard of that one. Don't worry too much though. It can't make
you look any more foolish than your "Extra right out of the box" claim.

> I'm still working on that one, but something's holding me down...

That'd seem to be a necessity. Hot air has a tendency to rise.

> Now sit down in front of your orion, snarly dave. Amaze yourself.

I do that quite frequently, Leonid.

That's rich! You've sat on your duff for almost an equivalent period
and are still writing about "getting into amateur radio". Thanks for the
laughs, Leonard.

> >Nope. Nothing about your obtaining an amateur radio license here.
>
> Oh? Is this a requirement to be in the electronics industry?

Was that under discussion? I could have sworn that amateur radio was
the topic in which you decided to submit your PROFESSIONAL credentials.

> Strange, isn't it, not one single personnel person (that's "human

That is incorrect, Leona. You have your facts scrambled. I'll be happy
to quote the post if you're having trouble remembering.

> >You haven't Beeped Morse nor have you Passed Any Written Exam. You've
> >taken no action on your declared interest.
>
> I have NO interest, declared or otherwise, on "beeping morse," bleeping
> dave. Never claimed otherwise.

I understand that. There is an amateur license available which requires
no morse test. It requires a pretty straightforward written test. You
haven't tackled it.

> Is that a requirement in your SS view of amateur radio?

What kind of view?

> I passed four written exams at an FCC field office in Chicago, 1956.
> I passed all kinds of college exams after that, a California driver's
> license written exam among others (despite a non-interest in
> becoming a professional driver).

Bully for you. You haven't passed an amateur license exam.

> Does one have to Post Bans on "interest in radio?" Must be so at

>old at the time.

What a great new game! I'll play:

I was born April 24, 1954. I got my Novice ticket October 14, 1967. I got my Extra September 26, 1970. (Dates are when the actual license arrived - passed the tests about six weeks earlier). I reckon that made me 16 years, 5 months, 2 days old when the Extra came in the mail. That 2 year experience requirement held me up at least a year).

Anybody else?

One of the side effects of the internet as relates to Ham radio is the new ham that has looked at a lot of web pages, studied a lot of books, and has been woefully short of personal dealings with actual hams.(red faced, raising my hand) I think that the ARRL is pretty aware of this, witness their new Elmering program, which will take some steps in getting more one on one or several on one interaction. Unfortunately they also presented a dopey restructuring plan to go along with it.

Born June 9, 1954

Technician license October 21, 1999 - tested Williamsport PA

General license June 25, 2001 - E-2 Butler, E-1 State College PA

Extra License February 26, 2002- Tested Lock Haven PA

So I was 45 when I got my Tech, 47 for my General, and 47 for my Extra.

Just a baby!

I must admit, I've taken a shot or three at Len over exactly the same
issue - no Amateur callsign = no valid opinion on Amateur issues.

However, a little research reveals that this distinction would be
irrelevant in Canada, as we grant full Amateur license privileges upon
request to persons with appropriate Professional license
qualifications.

An excerpt from Industry Canada's Radio Information Circular follows:

==========

Persons holding any of the following Canadian certificates may be
issued an authorization to operate in the amateur radio service with
the same operating privileges as the holder of an Amateur Radio
Operator Certificate with Basic, Morse Code and Advanced
Qualifications: (** NOTE: equivalent to US Amateur Extra license)

- Radiocommunication Operatorï¿½s General Certificate (Maritime)
- Radio Operator's First Class Certificate
- Radio Operator's Second Class Certificate

Persons holding any of the following Canadian certificates may be
issued an authorization to operate in the amateur radio service with
the same operating privileges as the holder of an Amateur Radio
Operator Certificate with Basic Qualification: (** NOTE -
approximately equivalent to US Technician license)

- Radiotelephone Operatorï¿½s General Certificate (Aeronautical)
- Radiotelephone Operatorï¿½s General Certificate (Maritime)
- Radiotelephone Operatorï¿½s General Certificate (Land)
- First-class Radioelectronic Certificate

The full text of IC RIC-3 is available at:

http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/vwapj/ric3.pdf/$FILE/ric3.pdf

==========

It would seem to me that this makes perfect sense - radio operation is radio operation, and the Pros have made a career of it - and invested considerably more education, time, effort and ongoing training than would be possible for most hobbyists. After all, it would be pretty silly for the folks at the local photo club to argue that Yosuf Karsh's pictures were pretty good, but not up to "Amateur" standards!

After all, the testing done for Amateur licences today is pretty easy to pass, even without a formal education in electronics. Too easy, I'd say, but that is another issue......(when 7 year olds can pass exams with questions requiring calculation of squares, logs and complex numbers - which sure as heck weren't part of my kids Grade 2 syllabus - I start thinking rote memorization of question pools....)

A question - was a similar arrangement for the recognition of professional credentials in the Amateur service ever in place in the US? With the reciprocity agreement between Canada and the US, someone who has obtained their Amateur licence based on their Professional qualifications automatically gains full Amateur operating privileges when travelling in the US. One would think it logical for this arrangement to be bidirectional, n'est pas?

I'm not sure if Len's First Class license is equal to any of the Canadian ones listed in RIC-3 above - but if they are, the Canadian equivalent to his license would be sufficient to acquire a VEx callsign absolutely free upon request.

Well, for a 49-cent stamp, anyway :)

In the USA, there are almost no professional radio operator licenses
left. There's the GROL and some radiotelegraph licenses, the latter
because Morse operation on ships is still permitted (but no longer
required).
>
>An excerpt from Industry Canada's Radio Information Circular follows:

>It would seem to me that this makes perfect sense - radio operation is
>radio operation,

Is it? Then why all the various endorsements? Is "operating" a TV broadcast
transmitter the same thing as 160 meter RTTY operation? I don't think so.

>and the Pros have made a career of it

All that means is that they get paid. There are some ladies and gentlemen
on the streets of most major cities who make a "profession" out of something
most people do as amateurs. (Some say it's the oldest profession). Those
people must be qualified to give advice on the subject of their profession,
don't you think? ;-) We should revere what they say and do, and not
question their knowledge and opinions on the subject, right? ;-) ;-) They
must be better at it than us unpaid amateurs because they get paid to
do it, right? ;-) ;-) ;-)

> - and invested
>considerably more education, time, effort and ongoing training than
>would be possible for most hobbyists.

Maybe - remember that most of them got the license *before* the job. Back when
the USA granted such things, the old Extra written was considered by most to be
at least the equivalent of the First 'Phone.

But now here's the big one: do the professional licenses include testing of
the
amateur rules, regulations, and operating practices? USA ones don't.

And are professional licensees allowed to build their own transmitters and put
them
on the air without any certification?

>After all, it would be pretty

And that's not going to change any time soon. The GROL pool is public info,
too.

Do you know the 7 year old in question? If not, how can you say whether or not
she's qualified or knows how to do the required math?

>A question - was a similar arrangement for the recognition of
>professional credentials in the Amateur service ever in place in the
>US?

No, except that some radiotelegraphy test elements were credited
because they were essentially the same in both services.

The problem has always been that the commercial (not professional - in the USA
that means something very specific) licenses did not test for knowledge of
amateur regs or operating practices. So a commercial licensee was not
qualified to operate an amateur station based on the commercial license test
alone.
And that's still the case.

>With the reciprocity agreement between Canada and the US, someone

>when travelling in the US. One would think it logical for this
>arrangement to be bidirectional, n'est pas?

No. It's a bad arrangement. Unless the Canadian professional tests include
the amateur rules and operating practices, your government is derelict in
its duty to the ARS. That's a plain and simple fact. For the USA to make the
same mistake would be a very bad thing, unless the GROL tests were changed.
Even then it would be questionable, because it would probably be possible
for someone to pass the Commercial exam but get all the amateur-radio-related
questions wrong. Such a person is simply not qualified to operate an amateur
radio station.

Here is my take on the whole thing, Leo. Ms Jackson is free to expose herself under appropriate circumstances. If she wants to do a dance routine and have Justin Timberlake tear off part of her outfit. That is also okay - tho she might want to use a less weird presentation.

There are appropriate television venues for that, such as HBO, Cinemax, etc. Late night TV kind of stuff.

But not on the super bowl halftime show. Not on Teletubbies or Barney or Blues Clues or fishing shows. Those just aren't the places for that sort of thing. Even my favorite, the History channel, has some shows that deal with sex and show nudity. They put them on late at night when the kids are in bed, and any viewing is strictly voluntary. No one harmed.

For some reason, some people don't want to watch simulated kinky sex while their kids are watching the same.

Everything in it's time and place, and the superbowl isn't the time or place IMO.

The NFL has been trying to pander to a different audience the last few years. I remember when a sb halftime show was put on by "Up With People", of all things. Now it's simulated intercourse and exposed body parts. yawn.

I hope they realize that the "edgy" stuff was a miserable failure for
the XFL.

Of course not - operating RTTY on the Amateur bands is dead easy -
connect the transmitter to your sound card, install a software
program, make a couple of tests and adjustments, and away you go!
And, if you make a few mistakes along the way, or if it takes a week
to get it running, so what? You're experimenting, and that's what
amateur radio is all about.

Now, make a couple of mistakes and knock WNEP-TV off the air for a
couple of minutes - you might be an unemployed professional!

>
>>and the Pros have made a career of it

>do it, right? ;-) ;-) ;-)

I'll take your word for it, having no personal experience with the profession that you are referring to. If you say they're good, Jim, then they're good! :)

Generally speaking, though, professionals are more knowledgable than lay people because they are involved in their field full time, and are held to standards of conduct and proficiency set by not only the regulators but by their employers. And, rather than just sounding like experts, they are expected to demonstrate their proficiency - that's what they get paid for! 'Stay current or move out' is the rule of the technically-oriented workplace.

>But now here's the big one: do the professional licenses include testing of
>the
>amateur rules, regulations, and operating practices? USA ones don't.

Of course not - they don't teach professional photographers how to take amateur pictures either....

But the rules and regs can be learned pretty easily - the pros are used to keeping abreast (sorry)! of the laws and regulations pertaining to their field....it goes with the territory!

>
>And are professional licensees allowed to build their own transmitters and put
>them
>on the air without any certification?

Nope - this is what the Amateur bands are for (type approval not required, unlike the commercial frequencies).

In fact, there are precious few Amateurs left who could do that, Jim, even though our bands permit it. Passing any one of the current ARS tests does not require that sort of undestanding of electronics anymore. Not like when you first got involved - it has changed a lot since then.

Unfortunately.

IC has been advised of this under the recommendations that the RAC
made to them following WRC-03 - I sincerely hope that they listen!

>
>>but that is another issue......(when 7 year olds can pass

>
>And that's not going to change any time soon. The GROL pool is public info,
>too.

True, but if one did that, they'd have a tough time staying employed
with it - employers have a nasty habit of asking their staff to
demonstrate their abilities empirically, on a frequent basis!

Rote memorization was what my point was about, though - and I'm sure
that was the case.

>
>Do you know the 7 year old in question? If not, how can you say whether or not
>she's qualified or knows how to do the required math?

Well, if she can, she certainly is a prodigy alright. Grade 11 math
in Grade 2 - that is impressive! I'd say highly unlikely. Ever talk
to a 7-year old kid, Jim? They just don't operate at that level.
Good memories, though - like a sponge!

She is an Extra, though - I'll just bet she could build her own
transmitter from scratch (forgetting for a moment that 7-year olds
generally have enough trouble making neat letters with a pencil, let
alone operating a soldering iron....) - unlike the chief engineer at
your local NBC affiliate, who is merely a professional in his field
:)

You know, everyone seems to be holding this event up as a great
accomplishment for Amateur Radio. And I applaud the little girl's
dedication to memorizing the material and passing all of the required
tests. That took a lot of effort on her part.

But it is a clear indication that the testing procedure is far too
easy - IMHO. It can be memorized, which removes any requirement to

comprehend the material. Do you believe that a 7-year old can
comprehend the theories of complex numbers as they relate to impedance
in a resonant circuit? Bull.

IC disagrees. But I'll ask them to take your opinion under advisement
:)

Personally I'd think, for example, that the guy who sits in a control
tower accurately vectoring planes all over our busy airspace is far
better equipped to carry on a two-way conversation on 2-meters than
the average amateur who passed a relatively simple test! He could
learn all of the operating procedures that he needs by reading a
couple of sections of the RAC study guide....a couple of nights would
be all it would take. And, in a real emergency, that's the guy that I
would want to see on the radio, coordinating things! Not the guy with
the mag mount 2-meter antenna on his callsigned baseball cap at the
local hamfest.....(I swear he goes to every hamfest in the world -
you've seen him at yours, haven't you? :))

>For the USA to make the

>
> Do you need a DayGlo billboard to outline it? WAKE UP.
>
> The state of the art of radio communications long since bypassed
> morsemanship skills.

Obviously not, according to a poll recently conducted by "CQ"
magazine...AND judging by the amount of CW traffic one can hear at any
given moment on teh HF bands, Lennie.

Again, you persist in trying to make an assertion that's EASILY
disproven with simply procured evidence...ie: turning on any receiver
capable of covering the HF band.

> It doesn't take rocket science intellect to use, operate ANY radio.

Obviously it does since you seem to be unable (or is it
UNWILLING?) to turn one on and see for yourself that the facts don't
jive with YOUR "jive".

> Morsemanship needs only repetitive Pavlovian training to become
> a wetware modem...provided the basic aptitude is present.
>
> NO modern communications carrier uses any morse code. Such
> skills went byebye some time ago.

"modern communicaitons carrier"...?!?! Not a COMMERCIAL one, but
since this is NOT a forum about any other radio service than the
AMATEUR Radio Service, it's NOT GERMANE.

> Teletype Corporation didn't make a half million teleprinters during
> their corporate existance to copy morse code.

And your mommy obviously didn't make you capable of being polite,
responsible or truthful, yet the potential exists.

> advancement or honing skills useful in case of national need.

Wrong again. Proven over and over, EVEN in the 21st Century.

> Your mileage on the newsgroup rageometer will, of course, vary.

No rage needed here. The comments of hundreds of disaster relief
workers, EMA managers, governmental agencies, etc to the contrary
suffice.

> Foaming at the mouth is normal, sarly dave, but don't forget to
> brush after every meal.

Trying to dodge responsibility for your own errors, either overt
or of ommission, will not change the fact that YOU are wrong,
Lennie...

No matter HOW many times you repeat your untruthful bile in this
forum, hundreds of OTHER media sources prove you wrong, and that just
tickles me to death.

> >I see. "Broadband" means "broad bandwidth". You could have knocked me

Actually, Mike, I don't disagree with you at all - what she did was quite inappropriate for the venue. But it ain't really that big a deal....

Read the article that I referenced, if you have time - it presents an interesting perspective on what tends to constitute "obscenity". Sex bad, violence good - you know. And, as always, Jack Nicholson's comment is priceless :)

Example - I watched a bit of "Full Metal Jacket" on TBS a while back. While all of the profanity and sexual references had been 'sanitized', most of the gore and violence remained (it was funny, though, to see Sgt. Hartman saying "Darn" and "Heck" and such, even though his lips clearly had other intentions...).

Where did society get the mistaken impression that sex is bad, but violence is OK? Is that really what we want to teach our children?

Not me!

Ahh, smilin' Jack. Gotta admit, he's honest. Probably says what most of
us want to say and don't have the cojones for. See his comments re
Brittany Spears in GQ!

> Example - I watched a bit of "Full Metal Jacket" on TBS a while back.

Darn good movie that! I don't watch a lot of movies with violence in
them, but that one was worth it. I couldn't imagine it without the
profanity, though.

> Where did society get the mistaken impression that sex is bad, but
> violence is OK? Is that really what we want to teach our children?

Dunno! I don't allow kids to watch the nasty violent stuff either. I'm
talking about stuff like FMJ.As good as the movie was, it was plenty
disturbing. Three Stooges are fine, as well as the other tame stuff.
Normal kids are fully capable of figuring out that when Moe hits curly
on the head with a pipe wrench, and it makes a sound like a hammer
hitting a frying pan, or when Bugs bunny blows up daffy duck, and
Daffy's bill is then upside down and on the back of his head, that's all
just fun.

I dunno, I guess but experiences, perceptions and observations vary all over the lot when it comes to educating kids. Never mind opinions on the subject. I'll cite my own case. As were all four of my parent's kids I was a pretty early and prolific reader. Implanting the joy of reading was the big gift our parents bestowed on us and they both worked at it. Hard. Once that bug was firmly installed we were pretty much left alone to find our own paths without much if any "hands-on participation" in our interests on their parts.

To wit: Geography was one of my hot buttons going way back long before I had the first clue about ham radio. Usta love to cruise the maps which came with National Geo. Any maps. Still do. When I finally bumped into ham radio and disovered that hams could actually communicate with people in those far off places I'd read about my course was set: I absolutely was gonna become a ham so I could go dxing. I did and I still do. It was my interest in geography which led me to ham radio. I don't give ham radio any credit at all for my interest in science. If I hadn't already had an interest in science I wouldn't have developed an interest in ham radio to start with. I was into building electric motors before I got interested in ham radio for instance. And in geology, bugs and weather science. I didn't have any interest at all in math as such until I was halfway thru engineering school with a General and it finally dawned on me that I was actually sort of enjoying the stuff.

> It didn't work
> toward interesting me in geometry though. I was caught reading QST
> hidden within my open geometry book.

Geometry was no sweat here but I got tossed outta 10th grade English class twice for laying out equipment panels at the back of the class. Then the flaming fairy teach caught Sally Leinhauser and I playing footsie. Such "activities" apparently really annoy fairies. No

problem, life coulda been a *helluva* lot worse than sitting out in the hallway with Sally.

During the same year I built an AM BC rcvr which used five of the tiny AG-1 flashbulb envelope subminiature tubes and stuffed the whole thing into a small Band-Aid can which I carried in my shirt pocket. Walkman Numero Uno. I went into biology class one day and strung the wire antenna to an overhead lamp fixture, put on the earplug "speaker" and started tuning around. The teacher, good 'ole Floyd Neff finally noticed the antenna and stormed to the back of the room, "What are you doing, what is that thing?" I cupped my ear, "Uh, it's my hearing aid, could you speak up a bit please?" Tossed outta class again.

You brought back a lot of hilarious memories of "electronerd educations" gone awry David. Gawd we had fun . . !

> For the first few weeks of my interest, my dad actively discouraged me
> with talk of amateur radio being a passing fad for me.
> He had visions
> of mounds of equipment gathering dust in a closet.

He was right, I've seen it happen . . !

> My mother encouraged
> me and was able to convince my father that some of the meager family
> income should be spent on a transmitter for me if I earned the money for
> the receiver from my paper route.

You got lucky, I got NOTTING in the way of economic support for diddling with radios despite the volume of coin my parents had. Their policy was that if some pursuit or another was important enough to their kids we could bloody well work out how to pay for it on our own or drop it. With the notable exception of cheerfully paying the expenses related to Boy Scouting. I *really* needed radio gear so I had a couple paper routes, peddled magazine subsciptions, painted house numbers on curbs in December, etc. Got the equipment and some early lessons on how much work hot buttons can actually cost.

> My dad had and has no technical abilities whatever. My mother was
> deathly afraid of electricity and wouldn't even clean my ham shack. She
> just knew that lightning was going to enter the house via my antennas.
> Both parents saw value in amateur radio as a wholesome activity, one
> which would nurture an interest in science and possibly lead to a career
> in electronics.

Once more we all obviously came from very different directions to a sort of convergence here. My Dad excused himself from an orphanage at age 14 and became an apprentice tool and die maker. Eventually he moved on into the U of P med school research labs as a creative guru in the electrical instrumentation, glass-blowing and mechanical shops. Mom became a secretary-turned-lab-assistant in the same research facility where they met in 1933 or so and here I is. Mom had a much older civil engineering student brother who "fiddled with radios all

night" and who might have been an early ham. He passed away before he graduated so I'll never know if he was a ham or not. Bottom line here being that when I got into ham radio and hung wires all over the yard none of it particularly attracted much parental attention. At dinner one night I puffily announced that I'd worked Africa for the first time the night before, a ZS6 on 80 CW. "That's nice dear. Did you clean your bedroom yet?" Career guidance via ham radio? Ha! As if.

Just after WW2 they put together the family tool and die works in which all four of their offspring were raised. So of course we all became gearheads, even the girl knows wrenches. Two mechanical engineers, another tool and die maker (turned statistician and programmer), the girl got into computer programming about the time the first punch card decks showed up. What I have gotten out of ham radio as it relates to my career is a *much* better grip on EE sorts of things than the average ME has. Has proven to be a very big asset on many occasions.

I raised my three daughters pretty much the way I was raised and none of 'em are slouches in their various professional technical fields.

Sounds safe enough!

!!WARNING - OFF TOPIC MATERIAL FOLLOWS!!

Hmmm - Mike, if you have a high speed internet connection. check out
the following newsgroups:

alt.binaries.multimedia.3-stooges
alt.binaries.multimedia.cartoons.looneytunes

You can download complete episodes there, which should amuse the
little ones (and you too!) for quite a while. New ones are uploaded to
these groups every day.

And, unlike this group, there are only a total of 6 stooges to be
found! :)

In the trade mag _TV Technology_ page 29 Dr Kraus has a few DTV
transmitters for ham
radio operators. Email is krausue at uni-wuppertal dot de hoping to
avoid spambots
Use them in the 70cm and 23 cm bands. Don't know what price, though.

When you get right down to it, except for a few shameful and widely
publicized exceptions, todays kids suffer from too little rather than too
much
physical punishment. Worst form of abuse for todays kids is to let'em grow
up with no self control or discipline. That was true in earlier generations,
too.
Look at Bill Clinton and, for that matter, the younger days of our current
President. Sometimes they grow out of it and sometimes they don't.

HWB

2193. Amateur Radio Newsline™ Report 1382 – February 6, 2004

Amateur Radio Newsline™ Report 1382 – February 6, 2004

Amateur Radio Newsline report number 1382 with a release date of Friday, February 6, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A major problem for Amsat Oscar 40, a surprise BPL rollout in Pennsylvania, UPS says that illegal 10 meter radios will be ordered out of company trucks and another view of the ARRL's restructuring proposal. Find out the details on Amateur Radio Newsline report number 1382 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: AO-40 SUFFERS CATASTROPHIC POWER FAILURE

The main battery pack on board the AMSAT Oscar 40 satellite has failed and controllers are unsure if the bird can be brought back to life on the reserve power system. Amateur Radio Newsline's Norm Seeley, KI7UP, tells us what happened on-orbit:

--

According to AMSAT Executive Vice President Rick Hambly, W2GPS, AO-40 began its tumble to obscurity on Sunday, January 25th. That's when the satellites battery voltage momentarily dropped to 24 point 5 volts. This triggered a fail-safe that shut down the satellites passbands. Then, at the beginning of the eclipse on orbit 1486 the battery voltage rapidly dropped just below the cutoff voltage of 24.0 volts and this shut down the transmitters to protect the battery and other on board equipment.

AMSAT controllers kept a close eye on the bird and on Tuesday the 27th the battery voltage suddenly dropped from to 14V. Mission commanders currently believe that more battery cells short circuited. Control stations immediately began transmitting blind commands to the spacecraft in an attempt to switch over to the auxiliary battery. Eventually, the auxiliary battery pack came on line, but in parallel with the main pack. This means that the shorted main Ni-Cad battery is loading down the back-up Nickel Metal Hydride cells are clamping the voltage low and keeping the auxiliary battery from fully powering the spacecraft.

AMSAT is hopeful that one of the cells in the main battery will eventually fail open circuit. This would effectively remove the damaged battery from service and permit the back up battery to assume the full load of AO-40. In the meantime its a waiting game with fingers crossed that no other catastrophic failures to other parts of the satellite take place.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, in Scottsdale Arizona.

--

A set of spare A0-40 back-up batteries were found at the AMSAT lab in Orlando Florida. Using them Stan Wood, WA4NFY and Lou Mc Fadin, W5DID performed a series of tests that showed the auxiliary battery pack on board the satellite should work well if they are otherwise undamaged. Unfortunately, than will only happen if the main battery pack can be pulled off line.

**

HAM RADIO IN SPACE: MIKE FOALE TALKS HOME

Still with ham radio in space, Wednesday, January 28th was a very special day on board the International Space Station for Astronaut Mike Foale. That’s because the space traveler got the chance to speak to students at the school he used to attend and he did so using Amateur Radio. Take a listen:

--
Contact Audio no print transcript
--

The contact between Foale on board the I-S-S and the kids at The King’s School, Canterbury, England began at 17:42 UTC when the I-S-S answered the call of G-B-4-F-U-N. That station was operated by G-Zero-A-K-I and the audience kept its breath as Foale answered 12 questions.

--
Contact Audio - No print transcript
--

Media coverage of this contact was impressive. Meridian TV, BBC TV, BBC Radio Kent, Invicta Radio and the Kent Gazette interviewed the students and put reports in the main newscasts. The BBC World Service and the Press Association asked for information and contact transcripts. (ARISS, ON4WF)

**
THE BPL FIGHT: PA HAMS ORGANIZE TO FIGHT ALLENTOWN ROLLOUT

Hams in Northampton County in eastern Pennsylvania, just outside of Allentown, are organizing a campaign to protest announced plans by PP&L to offer Broadband Internet Service over power lines in a development in Hanover Township. The Allentown-based utility has been doing field tests of the technology in nearby Emmaus, Pa.

The ARRL's Eastern Pennsylvania Section Manager Eric Olena, WB3FPL says PP&L sent out 2,000 letters to residents in a section of Hanover Township and already has received replies from 200 people interested in subscribing to the service.

Olena says an ARRL District Emergency Coordinator and other hams met with township officials to warn them about the massive inteference Broadband over Power Lines brings to the radio spectrum, including fire and emergency

frequencies. But, he says, the officials apparently were swayed by the utility's assurances no such interference exists.

An interview with Olena and others involved in the battle, coming in next week's Newsline. (ARNewsline(tm), NT3V)

**

ENFORCEMENT: EVEN MORE COOPERATION COMBATTING 10 METER PIRATES FROM UPS

A follow-up to our recent story concerning the use of unlicensed 10 meter radio gear on-board United Parcel Service Trucks. As reported, back on January 7th the FCC notified the U-P-S offices in Elkhart Indinana and Middleburg Heights Ohio of its findings. The company offered its full cooperation to end the problem.

Now comes word from the FCC that they have been contacted by UPS national corporate headquarters has contacted the regulatory agency and the company did not mince any words. It told the FCC that the agency has its full cooperation in removing any unlicensed radio gear and any non-certified two-way gear from their delivery fleet, nation wide.

According to UPS, the only personally owned radio gear permitted in their trucks under a collective bargaining agreement with their union drivers are commercially built unmodified C-B sets, and that only on a regional as-needed basis. No other radios are allowed. (FCC, UPS, others)

**

ENFORCEMENT: THE FCC ACTIVE IN A NUMBER OF CASES

Meantime, the FCC has been active in a number of other enforcement issues involving ham radio operators. The agency’s Daryl Duckworth, NN0W, has more:

--
Duckworth: “An Extra class license was downgraded to Technician class due to a failure to appear for a retest in Solidad California. Also, cancellation of an Extra class license in Medera California for the same reason.

A notice for retesting was sent to a General class licensee in Hialeah Florida. The deadline for that one is March 1st.

A letter requesting additional information pursuant to Section 308(b) of the Communications Act -- in order to make a decision on a General class renewal went out to Newton Square PA..

A letter settling enforcement action with a General class licensee in Bart VT. has resulted in voice operation prohibited for three years on 20 meters.

Daryl Duckworth, NN0W, reporting.
--

Even though its still not naming names of alleged violators the FCC is making sure that those thinking about breaking its rules know its still around. (FCC, RAIN)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA3PBD repeater serving Pittsburgh, Pennsylvania.

(5 sec pause here)

**

RESTRUCTURING: ANOTHER LOOK AT THE ARRL PROPOSAL

Even though there are more than a dozen restructuring proposals before the FCC, its the American Radio Relay Leagues recent filing that really has the world of Amateur Radio talking. The obvious question is why, and thats what we asked correspondant Mark Abramovich, NT3V, to find out:

--

As more amateurs find out what the ARRL has to say, they're starting to pay attention.

When the ARRL speaks, the FCC generally listens. In the past, the FCC has used the organization's proposals as a foundation for decisions.

To understand where the ARRL is coming from, you might want to get some perspective from the past. Who better to offer it than Harry Dannals W2HD - elected ARRL president in 1972 and re-elected to five consecutive terms. Now retired and living in Charlottesville, Va., Dannals is on top of the debate.

"It's a long cry from the days of incentive licensing when we did have people who resigned their membership, withdrew their membership, or did not renew their membership, just to show their disappointment and utter dissatisfaction with the incentive licensing proposal as it was named," Dannals recalls. "Because that was indeed (what it was), in the minds of the ARRL board headed at that time by President Herb Hoover.

He believed that in order for us to show that we were improving ourselves and becoming better at what we do that we should upgrade our license structure."

Dannals says the claim the ARRL proposal for a "no code" HF license "dumbs down" the hobby is off the mark.

"I think the new proposal, despite the criticism by those who say: 'I had to do it and therfore, you have to do it,' I think the new proposal will bring more people into amateur radio than the 'no code' proposal ever did," Dannals says.

Dannals says the Novice concept will go a long way in revitalizing interest.

"The introductory grade of license will give them some of the things that will make amateur radio mean more, the long-distance communication, the long friendships that develop over the many thousands of miles," Dannals says. "And I do believe we need this."

Dannals laughs at the fears that we'll need hundreds of FCC types to police the new hams.

"I think if the amateurs themselves who have experience, the older timers - and they don't have to be white-haired and grizzly old-timers - they can be relatively newcomers, maybe 5-10 years," Dannals says. "They can take care of tutoring the newcomers more than adequately."

Dannals says local radio clubs are the key to success for any license restructuring.

"Put out a handshake and say: 'Come on board. We'll help you, we'll teach the courses that you can use to get your license and we'll help you once you've got your license.' The old Elmering still is working."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Keep an ear open for more on this from both Harry Dannals and Mark Abramovich as all of the restructuring petitions wind their way through the FCC rules making process over the next several months. ARNewsline(tm))

ON RAIN: JIM HASYNIE W5JBP

Meantime an in-depth conversation about this issue with ARRL President Jim Haynie, W5JBP, is available from RAIN -- the Radio Amateur Information Network. Its in cyberspace at www.rainreport.com or on the phone at area code 847-827-7246. (RAIN)

**

REGULATORY: CROSS BORDER RADIO DISPUTE BETWEEN US AND MEXICO BROADCASTERS

A cross border radio war may be brewing between the United States and Mexico. This as complaints of massive interference to United States broadcast operations from a new station on 560 kHz in Tecate Tijuana Mexico lead to a high level telephone call between the FCC and the Mexico’s SCT on Thursday, January 29th. A call that many hoped will defuse the situation before it escalates any further.

According to the CGC Communicator, the SCT which is Mexico's telecommunications regulator is said to have promised swift action in eliminating the interference that XEKTT is currently causing to U.S. stations. But the story does not end here. Concern for Mexico's planned operations as XESS on 780 kHz and XEDD 920 kHz, also in the vicinity of Tijuana continues to mount. A printed copy the authorization for 780 kHz has surfaced. It confirms that operation with 20 kilowatts dayside and 10 kilowatts night with non-directional facilities both times and a quarter-wave tall broadcast tower is in fact sanctioned by the SCT.

The CGC Communicator says that this confirms the power figures it published a few weeks ago and establishes what it terms as more blow torch situations. Meanwhile, additional broadcasters are joining the list of companies concerned

with the current 560 kHz interference. (CGC)

**

ENFORCEMENT: THE FCC VS. THE SUPERBOWL HALFTIME SHOW

FCC Chairman Michael Powell has ordered an investigation of the telecast of last weeks Superbowl half-time show in which rock performer Justin Timberlake ripped part Janet Jackson costume on-camera. The stunt brought a massive number of complaints to the regulatory agency from viewers of the game.

In a press release obtained by the Amateur Radio Newsline, Powell states: “I am outraged at what I saw during the halftime show of the Super Bowl. Like millions of Americans, my family and I gathered around the television for a celebration. Instead, that celebration was tainted by a classless, crass and deplorable stunt. Our nation’s children, parents and citizens deserve better.”

CBS which aired the game denied that the incident was preplanned. None-the-less, Powell instructed the Commission to open an investigation into the broadcast. He also stated that the inquiry will be thorough and swift.

At least in theory, each station that permitted the video to be aired could be fined or have its license designated for as hearing if the investigation finds that the material was either indecent or obscene. (FCC release)

**

RESCUE RADIO: AGENCY WARNS OF BIG FIRE SEASON IN THE SOUTHWEST

Hams involved in emergency communications in the Western United States should get ready for a rather busy fire season. At least that’s what a recently released preliminary outlook for 2004 seems to imply. Bill Pasternak, WA6ITF, has the retails:

--

According to Jay Miller, W-A-5-W-H-N and Raleigh Stout A-C-5-J-W, the Southwest Area Coordination Center in Albuquerque, issued the report. The center is a multiagency hub for the region's wildfire operations and it says that persistent drought and millions of dead or dying trees have set the stage for a fire season as bad or worse than 2002. That’s when millions of acres burned across the region.

In southeastern Arizona and southern New Mexico, field surveys reveal that the snow pack holds less than 20% of the average moisture of a normal mid-winter. Coupled with the 2003 monsoon season being one of the driest in a century, the center says that tinderbox conditions are manifest.

And its going to get worse. With little relief in sight, the fire season, which usually begins in April, could start a month or more earlier. Public land managers are being urged to complete training and preparations sooner than usual and to put more firefighters on duty. It also means that hams involved in support of firefighting efforts will need to hone their skills a lot earlier

this year in order to be prepared.

For the Amateur Radio Nerwsline, I’m Bill Passternak, WA6ITF

--

Its beginning to look as if firefighters and the ham radio operators who support them may have a tough fire season ahead. (ARNewslin(tm), WA5WHN)

**

RESCUE RADIO: TEXAS CELLPHONE HERO

A 40-year-old flight attendant in El Paso, Texas is being hailed as a hero. This, for her fast and efficient handling of 15 to 20 9-1-1 calls which were sent to her home phone due to a routing error at S-B-C Communications.

News reports say that Maria Chaidez Karam processed the calls for help - including several emergencies - during the 41-minute glitch. In fact, she relayed details via her own cellular telephone to the police dispatch center's seven-digit non-emergency number.

Complete details about this story are on the web at http://www.borderlandnews.com/stories/borderland/20040119-70359.shtml (CGC)

**

RADIO LAW: ABRAMS VS. RPV - ANOTHER WIN

An update on the case of radio site owner Mark Abrams WA6DPB versus the city of Rancho Palos Verdes California. Abrams has been embroiled in litigation against the city for several years and has won every round, This is no different. The 9th Circuit Court of Appeals ruled on Thursday, January 15th, that Abrams is entitled to damages, attorneys fees and court costs from the city, but there is a catch. Abrams says that the decision only entitles him to a trial to determine the amount of money involved. It does not set an award amount. (WA6DPB)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE WAR ON TERROR: SECURITY ALERT FOR CELL PHONE GUNS

Don't be surprised if you're asked to make a call on your cellphone the next time you go through airport security. Time Magazine quotes sources as saying handguns disguised as regular cellular telephones have been seized in several

drug raids across Europe.

The potentially deadly devices look exactly like a normal cellular handset but are capable of rapidly firing four .22-caliber rounds of ammunition. They are manufactured in Croatia and are fired by punching buttons on the keypad

So far, none of the phony cellphones are known to have surfaced in the United States. Aviation security experts say screening equipment now in use can detect these cellphone guns as well as all other improvised explosive devices.. The rest is on-line at http://www.time.com/time/magazine/article/0,9171,1101040202-581402,00.html (CGC, Time Magazine)

POSTAL PROBLEMS: CQ INVESTIGATES DAMAGED MAGAZINES

If you are wondering why your ham radio and other magazines have been showing up with torn covers or their insides missing, you are not alone. So were the folks at CQ who were receiving complaints from their readers. So they launched their own probe and what they found that its likely a problem at the United States Postal Service.

According to CQ Publisher Dick Ross, K2MGA, the postal system has installed new equipment that’s designed to speed up the processing of mail through automated sorting. Ross says that it usually works quite well but unofficial information coming to him says that the units can cause problems if they are even slightly out of adjustment. As Ross says, it sounds as if the new technology demands maintenance far beyond having a service crew fix it when it breaks.

Ross says that his magazines have already taken steps to get around the problem until the postal service finds a permanent fix. This includes new imported paper for the magazine covers.

What Dick Ross found out about the foibles of the postal services automated sorting system makes good reading. You can find it on page 4 of the February issue of CQ Magazine. (CQ)

NAMES IN THE NEWS: FCC ENGINEER MICHAEL J. MARCUS HONORED BY IEEE

A word of congratulations to Dr. Michael J. Marcus, N3JMM, of the FCC’s Office of Engineering and Technology. This, after recently being conferred as a Fellow by the Institute of Electrical and Electronic Engineers based on his extraordinary record of accomplishment.

The IEEE chosen to honor Marcus’ contributions in the field of radio technologies with specific recognition to his creative technological vision that significantly advanced policies. This helped to lead to the deployment of spread spectrum and Wi- Fi technologies.

Dr. Marcus joined Office of Engineering and Technology in 1979 and currently serves as its Associate Chief for Technology. He received his bachelor's and doctorate degrees in electrical engineering from Massachusetts Institute of Technology. Before joining the FCC, Dr. Marcus worked for Bell Laboratories, the U. S. Air Force, and the Institute for Defense Analyses. (FCC release)

HAMFESTS: AM EXPO 2004 IN NEW JERSEY IN APRIL

Turning to the ham radio social calander, AmExpo, an event within an event will take place on Friday April 30 through Sunday May 2nd 2004 at the Millville Airport located in Millville, New Jersey. In addition to the hamfest, the 2004 "Wheels & Wings" air show is occurring at the Millville Airport at the same. This event features many extraordinary aerobatic exhibitions including the Air Force Thunderbirds. (

Meantime, Hugh McElroy, W2AVN says that AmExpo itself is a celebration of the evolution of communications. Included will be demonstrations of ham radio satellites, Echolink, along with HF, VHF and UHF radio communication in every mode. More information is on-line at www.p49millville.org. (W2AVN)

**

SEMINARS: COMM ACADEMY IN WASHINGTON IN MARCH

The sixth annual Communications Academy set for March 20th and 21st at the Shoreline Conference Center, in Shoreline, Washington just north of Seattle. This years theme is Interoperability and the Expanding Role of Amateur Radio Communications. The keynote speaker is retired Police Chief Gerald W. Boyd, KW7J. Boyd is the author of five books including three on amateur radio emergency communications. You can find out more in cyberspace at www.commacademy.org (Press release)

**

CONFERENCES: EASTERN VHF CONFERENCE IN CT. IN APRIL

And the 30th Annual Eastern VHF/UHF Conference will be held on April 16th to the 18th at the Radisson Hotel in Enfield, Connecticut. Guest speakers to date include Dan Henderson, N1ND, on the status of ARRL VHF/UHF Contesting & Awards, Del Schier, K1UHF, with a talk called What's New at West Mountain Radio and many others. And, as a special thank-you to all those who have supported the conference the planners are providing a free dinner to all who register for the event. More, including registration forms can be found on-line at www.newsvhf.com (VHF REflector)

**

INTERNATIONAL - UK: WORKED ALL BRITAIN AGM ON FEB 15

In international news, the Worked All Britain Awards Group Annual General Meeting will take place on the 15th of February. The venue is the Radiosport Communications and Computer Show at Stevenage in the United Kingdom. Nominations for the committee to consider should be sent to G0NLX at her call

book address no later than February 13th. (RSGB)

**

CONTEST OPERATIONS: K7BV TO TURKS AND CAICOS FOR ARRL DX CW

From the contest calendar word that Dennis Motschenbacher K7BV will be in the Turks and Caicos Islands from Feb 19th to the 26th. This, to operate in the ARRL DX CW contest using the probable call sign of VP5M. He will use VP5 stroke K7BV outside the contest with operating emphasis placed on the WARC, 6 and 2 meter bands. VHF WSJT meteor scatter scheduled contacts can be arranged. QSL via KU9C. (VHF Reflector)

**

DX

In DX, word that five German operators are from Tobago active as 9Y4 slash their home calls through the 14th of February. Look for them around 14.277, 21.377 and 28.377 Mhz. (GB2RS)

And F6AIG is currently on the air from Mayotte. Look for him around 17.00 UTC on about 14.130 Mhz. (GB2RS)

Lastly, DL2GAC is again active as H44MS from Honiara in the Solomon Islands. He plans to stay there a while and is active on 80 through 10 meters on SSB. For all of these operations, please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: BROADBAND OVER POWERLINES - AUSTRALIA SHOULD WAIT AND SEE

And finally this week, the pitfalls of broadband over powerlines technology have been highlighted down-under by a group calling itself The Spectrum Issues Group Australia or S-I-G-A. This, in a letter published in the Sydney Morning Herald and The Age news papers. Q-News Graham Kemp, VK4BB has the details.

--

While BPL holds out the promise of always-on internet availability from every household power point, overseas experience with this new technology shows Australia should not rush into adopting it.

BPL/PLC systems installed here would cause significant interference to high frequency communications users across Australia which include emergency services, aircraft, police, rural and remote services, maritime, government agencies and private users such as we Radio Amateurs.

Roger Harrison, VK2ZRH, speaking for the group says they are an informal alliance of organisations and individuals across Australia with interests in RF communications and technologies. Alliance members come from broadcasting, community service bodies, consultancies, emergency services, equipment manufacturers and suppliers, government, industry bodies, the radio amateur community and other radiocommunications users.

Graham Kemp, VK4BB.

--

The S-I-G-A letter makes fascinating reading no matter where you are in the world. It can be viewed on line at the Fairfax f2 website. That U-R-L is in this weeks printed Amateur Radio Nerwsline report.

It's one end of the continuum, and can be as laid-back or
extreme-challenge
as you want it to be. 2003 was laid-back for me - setup took about 2
hours
tops, and teardown less than an hour. 1B-1 Battery, lotta fun, 230+ CW

QSOs. 1995 was an allout effort - made 629 CW and 11 FM simplex QSOs in 1B-1. Putting
up the 41 foot homebrew portable mast by myself in the rain was a bit of a challenge....

Both were great learning experiences.

> How is it as bad or worse? I think it's much better!

It's worse because Bonnie is a no-counter, the guys who wrote the ARRL
version should have known better. I looked all of 'em up to find out
where they come from. One is a VHFer, two or three others are big into
HF APRS and HF Echolink sorts of interests. Lotta TAPR connections.
Only one, maybe two of 'em do much with conventional HF modes. The
real kicker is that the two really heavy hitters on the committee
bailed away from it. We all know who G3PLX is and what he's done but
his reason for resigning from the committeee is publicly unkown. The
other is KH6TY who invented DigiPan PSK31 and PSK 63 and is the
recipient of the 2000 ARRL Technical Excellence Award. He disagrees
with the final output and supposedly will craft his own version of the
report.

> First off, it does not widen the 'phone bands anywhere near as much as the
> KQ6XA plan.

The phone bands *will* get widened and this report won't have anything
to do with it.

> Nor does it decrease the Extra segments.

Minor point overall but at least they had enough sense not to mess
with that bag of worms.

> Second, the 200/500/2700 Hz rules

So where's the 10/8Khz wide digital stuff gonna run? DRM will be
excluded?

> are for a *voluntary bandplan*, not FCC regs.

Bandplans work on bands >30 Mhz because Riley can enforce 'em when and
where they actually matter. Voluntary bandplans for MF/HF have been
out there for eons and they *don't* work. All adopting this proposal
would do is generate more opportunities to bust bandplans.

> Third, it actually acknowledges that hams use modes like CW and Baudot RTTY.

Wunnerful. Hang dividing lines somwhere around the bottom edges of
what are now the lower limits of the phone bands. All modes above
those limits gotta be 8-10 Khz wide max, everything below can't exceed
1 Khz wide and let the market sort 'em out.

None of it matters anyway, we're both blowing hot air. This report was
submitted almost two years ago and has gone nowhere. I'm not holding
my breath waiting for the BoD to even address it let alone adopt it
then dump anything even close to it on the FCC.

At least they have to take the initiative to request it and that would make all the difference. Len has made no effort that anyone can see to get an amateur license. He appears to want to make changes without being a member of the affected group. It's rather like complaining about your congressman when you don't bother to vote.

Are those "tests and adjustments" covered in the "professional"
license
tests?

Are the amateur frequencies where RTTY is allowed, and what types of
RTTY are allowed, covered in the professional license tests?

> And, if you make a few mistakes along the way, or if it takes a week
> to get it running, so what?

Depends on the mistake.

> You're experimenting, and that's what
> amateur radio is all about.

Then why have any ham radio tests or licenses at all? You're arguing
for the end of all testing for a ham license, Leo.
>

> Now, make a couple of mistakes and knock WNEP-TV off the air for a

I wouldn't know - I'm only an amateur in that field too.

> Generally speaking, though, professionals are more knowledgable than
> lay people because they are involved in their field full time, and are
> held to standards of conduct and proficiency set by not only the
> regulators but by their employers.

Generally speaking. However, commercial radio and amateur radio are
different fields. Being a "professional in radio", by itself, is no
indication of qualification to operate an amateur radio station, and
even less of an
indication of qualification to determine amateur radio policy.

> And, rather than just sounding like
> experts, they are expected to demonstrate their proficiency - that's
> what they get paid for! 'Stay current or move out' is the rule of the
> technically-oriented workplace.

Current with what? Most TV stations are still broadcasting NTSC
signals, based
on a mode that's at least 50 years old. If you don't care about color,
a 1946
NTSC TV (if you can find one that works) is still usable. Then there's
FM

broadcasting which is about as old and good old MW AM, which goes back
to the
1920s.

Then they are not qualified.
>
> But the rules and regs can be learned pretty easily

Then there's no problem with requiring them to take a test
for an amateur license.

> >
> >And are professional licensees allowed to build their own transmitters and put
> >them
> >on the air without any certification?
>
> Nope - this is what the Amateur bands are for (type approval not
> required, unlike the commercial frequencies).

Then the "pros" aren't necessarily qualified in that area, either.
>
> In fact, there are precious few Amateurs left who could do that, Jim,
> even though our bands permit it.

I can, and have.

> Passing any one of the current ARS
> tests does not require that sort of undestanding of electronics
> anymore. Not like when you first got involved - it has changed a lot
> since then.

It was not required when I got started either. The US tests went to
all-multiple-choice in 1960. Pick enough right answers on the written
tests and you pass, regardless of whether you understand the material
or not.

Canada may be different. But I don't live there.
>

>
> Unfortunately.

They're PROFESSIONALS, Leo! They have to "keep current or move out",
right?
It's their JOB to know what's needed, right? Who are we poor dumb old
broken
down amateurs to question them? ;-)

Must not question the professionals. Their egos can't take it.
>
> IC has been advised of this under the recommendations that the RAC

How often does the average employee at WNEP have to demonstrate
knowledge
of calculation of squares, logs and complex numbers?
>
> Rote memorization was what my point was about, though - and I'm sure
> that was the case.

How do you know for sure?
> >
> >Do you know the 7 year old in question? If not, how can you say whether or
> >not she's qualified or knows how to do the required math?
>
> Well, if she can, she certainly is a prodigy alright. Grade 11 math
> in Grade 2 - that is impressive! I'd say highly unlikely.

Not Grade 11 stuff. Squares are 4th grade stuff around here. Logs
maybe
6th grade. Complex numbers probably 9th or 10th.

The 7 year old in question is homeschooled, btw.

> Ever talk to a 7-year old kid, Jim?

At least daily.

> They just don't operate at that level.

Some of them do. It depends on the child and the environment. Ever had
a
barely-7-year-old read "Watership Down" to you, and not miss a single
word? I have.

> Good memories, though - like a sponge!

Much of what's on the test (band edges, regs) is pure memory stuff.
>
> She is an Extra, though - I'll just bet she could build her own
> transmitter from scratch (forgetting for a moment that 7-year olds
> generally have enough trouble making neat letters with a pencil, let
> alone operating a soldering iron....)

The 7 year olds I know write and draw quite well. Also use computers
and
do math.

In one local second grade class, one of the first week's assignments
was to
write what you did over the summer. Expectation was 1-1/2 to 2-1/2
pages after
editing. (The kids are expected to do a rough draft, edit and final.
By the end of third grade it's outline, rough draft, edit, final). One
7 year old turned in a 31 page story (after editing) in the required
time. It was quite readable, legible, accurate and had all the
required elements.

I built my first transmitter at age 13. From junk parts. Worked quite
well. Of course I had previously built a couple of receivers and used
them
to learn the Morse code off the air.

Since then I've homebrewed-from-scratch at least 7 transmitters,
8 receivers, 3 transceivers, and their related power supplies, antenna

tuners, control systems, accessories, test equipment, antennas and
shack
furniture.

The above does not include kits built and rebuilt, old gear restored
to
operation, military surplus converted to ham use, repairs and
adjustments,
and stuff done for other hams. Of which I've done plenty...

It's easy and fun. Too many hams don't know what they're missing.

> - unlike the chief engineer at
> your local NBC affiliate, who is merely a professional in his field
> :)

He probably doesn't have a license and probably never built a
transmitter.

> You know, everyone seems to be holding this event up as a great
> accomplishment for Amateur Radio.

It points out that the tests aren't that hard. Which some of us have
been saying for years.

> And I applaud the little girl's
> dedication to memorizing the material and passing all of the required
> tests. That took a lot of effort on her part.

> comprehend the theories of complex numbers as they relate to impedance
> in a resonant circuit?

I'm sure some can.

>Bull.

Have you ever been around really bright children whose talents are
recognized and supported, Leo? They're capable of far more than
many adults give them credit for.

Complex numbers are simply a way of dealing with a pair of related
electrical quantities. There's no need to have a detailed
understanding of that whole
field of math just to do some LCR calculations.

And there is *no* requirement that *any* ham understand complex
numbers.

Maybe. But there's no requirement that he have any sort of radio
operator's license. He doesn't need to know how the radios work.
Complex numbers?

> He could
> learn all of the operating procedures that he needs by reading a

> some prettty tough material to master! LOL!

Would you talk that way to a 7 year old, Leo?

btw, when I was in EE school, I wound up elmering my faculty advisor.
He was a
PhD EE but didn't know much about radio, because radio is only a small
part of EE. He knew *his* part of EE backwards and forwards, but
needed *me* to help
him figure out ham radio. I was glad to help, of course.

Well, the Canadian bandplans are not mandated by IC - they are
voluntary, and developed by the amaueur community themselves.
Therefore, not covered on the Amateur exam. Neither was RTTY, as I
recall - that was learned later, after licensing!
>
>> And, if you make a few mistakes along the way, or if it takes a week

Not at all - I'm suggesting that (many of) the radio skills acquired
in the acquisition of a commercial license are directly applicable to
the Amateur service. Transferrable skills.
>>

That is a pretty simple skill - I'm sure the broadcast engineers could
figure it out rather quickly :)

Two different concepts.

Being a licensed professional in radio implies a knowledge of radio theory and concepts - many of which are tranferrable from one area (commercial) to another (amateur). By nature, amateur activities have much greater margins for error than professional ones - they are hobby based, after all!

Amateur radio policy, on the other hand, is made by legislators, none of whom require any knowledge of radio to carry out the responsibilities of their office.
.

With equipment that is vastly more complex than what the average amateur is using, though. If you get the opportunity, have a look inside a cellular base station sometime - all of the equipment in there is computer controlled - nothing even resembling a piece of radio gear to be seen.

The signal out, though, is Hertzian, and as old as the universe....

>Must not question the professionals. Their egos can't take it.

Well, I'm sure that if you asked a holder of a first class radio
license who has worked in the field for years a radio theory question,
they'd probably get it right! :)

>>

The receptionist - never. The hands-on technical people - rarely -
but they would need it to complete their formal education in radio
theory, I'd reckon.

>>

Cool. You'll need to locate a copy of WinRAR (a decompression program
similar to ZIP) and perhaps a few others as you go along. Just give
me a holler if you need any help.

For your reference, some info on the various file types you will
encounter, and what to do with 'em, is here:

http://www.warezfaq.com/file_types.htm

Nor I!

What all that violence really taught kids was that violence was the
preferred method to solve problems and get your way. As if.

The irony is that they were responsible for the creation of millions
of ex-catholics.

Not talking about bandplans.

>Therefore, not covered on the Amateur exam. Neither was RTTY, as I
>recall - that was learned later, after licensing!

Band edges. Power limits. Amateur operating practices. Requirements to
ID. Content limitations. All different for hams. Not covered in commercial
license exams.
>>

So when somebody decides to run ten or twenty times the legal power,
a "sorry" is supposed to cover it? Or when somebody uses ham radio
for commercial purposes, or music, etc.. a "sorry" is supposed to cover it?

Sorry, that's not good enough.

Yes, you are. If a "sorry" can cover most violations, there's no need for most
of the tests.

>I'm suggesting that (many of) the radio skills acquired
>in the acquisition of a commercial license are directly applicable to
>the Amateur service. Transferrable skills.

Maybe. But most of what a ham needs to know is not covered by a
commercial license test.

So what? They don;t have to buy it with their own money, nor take
care of it with their own money in their spare time. Amateurs do.
Makes all the difference in the world.

>If you get the opportunity, have a look
>inside a cellular base station sometime - all of the equipment in
>there is computer controlled

Which means no licensed operators are needed at all.

Elimination of operators has been a major goal of commercial and
military radio services for years. One less warm body to pay. Just
like the railroads eliminated most block operators years ago, and the
telephone company went to dial equipment, and the airlines went to
planes that can be flown by two, not three.

If they're meaningless they aren't needed.

Has the licensing of young children caused any problems for the ARS?
Are they making a mess of the bands?

btw, Canada used to have an age requirement of 15 for any class of
amateur license. Would you have them put that requirement back?

The USA never had an age requirement for a ham license, but at
least one frequent poster here petitioned the FCC to add an age requirement
of 14 years. Fortunately the FCC did not do so.
>

Just plug the old call sign into QRZ.com, and see if it is available. If so,
you can request it as a Vanity Call Sign. You can find the details on how to
do that right on that site, or you can Czech out ARRL.org.

Don't look now, Lennie, but Modems don't use Morse code, therefore no key is required.

Nope, never hoid of it. Must be something special. What's it used for?

> Have you learned to solder yet?

Yes, around age 10. Since then, I've soldered everything from water pipe
joints to printed circuits. But nothing requiring 63/37, yet. I guess that
leaves me way out of your league. Oh well.

My experience here in Dallas is just the opposite -- very low powered
digital signals from a 1500' HAAT transmitter site come in perfectly at
my home 35 miles away, while analog signals at remotely similar power
levels are extremely snowy.

Tom,

The problem is, with digital, it's either there or it's not. There is no fringe area. In Oregon, and other mountainous states, it's much different than Texas, Oklahoma or Kansas, where it's mostly flat. Even within the city of Portland, there are large numbers of places that are not line-of-sight, even from antennas at 2000' HAAT.. and the digital signals are not there at all in the shadows of any of the hills, nor are they available out on the coast, whereas analog signals, although relatively poor, are..

Yes, morse code gets through when everything else will.

>The problem has always been that the commercial (not professional - in the USA
>that means something very specific) licenses did not test for knowledge of
>amateur regs or operating practices. So a commercial licensee was not
>qualified to operate an amateur station based on the commercial license test
>alone. And that's still the case.

You KNOW this for certain, even back in 1956? :-)

Go to Ebay and buy some clues to who uses radios in the USA.
The first hint is that they aren't amateurs. The second hint is that
they don't have to test for morse code to be perfectly authorized to
communicate.

Don't take off the ARRL blinders just yet...your mental optic nerves
might not take the overload.

>>With the reciprocity agreement between Canada and the US, someone

>radio station.
>

"Plain and simple fact: the government of Canada is derelict in its duty
to the ARS." My, my, aren't you the War Crimes prosecutor about to
Make a Case!

Tell us, oh Noble Lord, why does the government of Canada HAVE to
do any duty to the ARS? Can't they just govern their own amateurs and
not have some "obligation" to the rest of the Americas?

Most Noble Lord of the Inquisition, you once again confuse "qualification"
with "authoritzation" or "grant." Adminstrations don't "qualify" any radio
operators in the USA, but they do AUTHORIZE them certain privileges
according to the radio service they were tested in.

My Lord, please step up to this pile of twigs and try on these ropes.
We want to "light your fire," so to speak. :-)

You want some fries with that?

No problem to me. :-) Somebody shoots at me in the newsgroup
and I shoot back...which bothers the hokey heck out some. :-)

What's fun, sort of, is to watch the adamantly stubborn they-are-
right-no-matter-if-they-are-wrong-but-try-to-rationalize-their-
wrongness-by-not-very-creative-spin. Usually I find those folks are
to ones who get personal amusement at others' misfortunes of
whatever kind. If someone doesn't have misfortunes they imagine
one and apply it to them, one way or another.

>However, a little research reveals that this distinction would be
>irrelevant in Canada, as we grant full Amateur license privileges upon
>request to persons with appropriate Professional license
>qualifications.

I think that is perfectly fine, but don't make book on any of the
PCTA newsgroupies to agree with that. They are hidebound with
gold leaf edging to hold utterly fast to their own beliefs and
standards...curiously enough exactly those when They first got
licensed (authorized, not qualified).

>An excerpt from Industry Canada's Radio Information Circular follows:

>Well, for a 49-cent stamp, anyway :)

Actually, I'm not absolutely interested in "being qualified" by a
pretty certificate (suitable for framing) from our FCC. I got
really and truly qualified to do that a half century ago, operating
HF transmitters having RF power outputs of 1 to 40 KW. The
operating word ought to be "authorized," not qualified. Our FCC
exists to regulate U.S. civil radio and interstate communications
(NTIA oversees military and government agency communications)
and their use of licenses is as a regulatory tool.

Besides, my 'first phone got changed to a General Radiotelephone
(Commercial) license some time ago. Watch this space since the
resident gunnery nurse is going to come in on that with six-guns
blazing, cussing up a storm but getting only misfires and overcast.
:-) heh heh heh.

Over 40 years ago I joined a grass-roots campaign for a young
senator from Massachusetts wanting to become President of the
USA. J.F.K. was Catholic but I had no desire to become Catholic.
Neither did I want any political position, favor, or anything else as a
result of such voluntary work on his behalf. Kennedy won by a
narrow margin. It was a "cause" that was just personal, nothing else
to justify it.

Some of the anal-retentive olde-tyme hammes in here DEMAND a justification for action, all but invoking a death penalty if one doesn't live up to their demands. Good grief, those are Charley Browns that Sparky never drew...except the maybe beagle dreaming of being a WW1 fighter ace in his Sopwith Camel. They dream of Being In Charge, of being some kind of "ace" in radio through their mighty macho morsemanship. [that kind of "ace" is not spelled with a C or E but with two Ss...:-)] Maybe its some kind of "radio testosterone"? Most of the time those MMMs just try to use a humiliation ploy with the incessant "I've got a license and you ain't, nyah, nyah, nyah." Geez, its only a HOBBY license but you would think they got promoted to Chief of Staff of Amateur Signals with some kind of field grade rank (colonel to general, complete with flag on front car bumper)... :-)

My only objective overall is to be one of many advocating the elimination of the morse code test for a license. That's it. But, there's another element that may be at work with some of the MMMs: If the morse code test is eliminated, they will lose bragging rights to their fabled rank, their status as guru radio operator gods in amateurism. That is extremely hard on their personal self-esteem and they get all steamed over such perceived blows to their boilers. They elevated themselves (without "bootstrap" circuit) to lofty positions and had most of their pedestals yanked away. They lost federal support for their mental hernias. They are but mortal and their works are not that mighty after all (to paraphrase Tenneyson). Nobody cares to admire their deeds and doings to standards and practices of 70 years ago, a time when they did not exist.

As far as I'm concerned, by all objective measure, there's just no need for any government to require a morse code test for any amateur radio license. There's no ITU requirement to "obey." Not since July of last year. The IARU agrees, despite the spin of the ARRL trying to indicate otherwise. The ARRL doesn't agree. PCTAs don't, indeed can't agree since the loss of the code test as a requirement would be an ego blow equivalent to mass destruction.

The familiar argument heard in here is to the effect that "ONLY amateurs can discuss, direct, or implement rules and regulations of and about amateurs." That's a base falsity. The United States Constitution, in its First Amendment, grants the right of ALL U.S. citizens to petition our government for the redress of grievances. We have a number of similar rights which don't discriminate in the favor of elitist, special interest groups. Our FCC was created by an Act of our Congress in 1934. In all the time since then (almost 70 years) there has been absolutely NO law or condition that any Commissioner or staff member hold any amateur radio license in order to make, change, or enforce amateur radio regulations. None. No such law exists...except in the imaginary posse commitatus fantasy of a small group of would-be tyrants of opinion...some of them in here parading around in the false patriotism of "honor and respect and tradition for 'the service.'" BS...a food group already processed through by male bovines.

All of the MMMs who parrot their false patriotism and elitism are really only trying to elevate themselves to lofty but imaginary positions of glory and gradeur that don't exist. Not a good role model for enhancing any interest in a fun, recreational activity involving radio. But, it satisfies them no end for, in their imaginary ego world, they are absolute champions of whatever they have done. All others are non-existant.

Actually, in such an environment, there is no possibility of rational, civilized discussion. Except for one little thing.

This is (so far) an open, public newsgroup, unmoderated. There are no guards checking credentials at any door, there are only the self-styled Waffen SS equivalents roaming about, snarling about "qualifications."

Interesting place, this newsgroup. Kraft-Ebbing could have had a second edition to cover it for the psychiatric professionals. Some get oriongasms even... :-)

>
>In the context of this newsgroup, that means just what?

Yup. You need to UPGRADE your neurons.

Hint: You made a general statement. I gave you a specific answer.

You didn't like the answer. You never do. TS. :-)

>> Snarly dave, I don't care about your amateur wonderfulness and
>> vindictiveness and bigotry to non-amateurs. I'm a pro, like it or no.
>
>If you don't care, why are you still haunting a newsgroup dealing with
>amateur radio?

Boooooo! I haunt you! :-)

Snarly dave, I said I don't care about YOUR amateur wonderfulness.

YOURS, snarly dave. You are NOT U.S. amateur radio. [thank
the Lord...the League membership drive would be in hell if so...]

>It is clear that you are not a radio amateur and that
>you are not, after all these years, "getting into amateur radio".

Snarly dave, it isn't in your power to demand "motivations" since
you are NOT a moderator in here, a judge, a jury, and certainly
not an executioner (although I'm sure you would relish the task
and with a side of fries to go with that).

I've been trying to argue the elimination of the morse code test
for ANY U.S. radio license.

Problem is, some of you and your ilk (ilk are similar to huns but
are not, unfortunately, a vanishing species) DEMAND "motivation"
and some kind of perverse "unquestioning love of a service" that
is supposed to be a fun, recreational activity about radio. As a
result you spend hours and waste Internet bandwidth insulting all
those who do not agree with your wonderfulness, etc.

>Haunt
>some radio professionals, using the endearing manner you've displayed
>here and see how long they put up with your condesent.

It's "condescension," not "condesent" or even 'condiment' although
it must spice up your life on here.

I've worked with professionals in radio and electronics a long time
and they don't come across with the kind of stuff you and the
gunnery nurse and other "proud SERVICE members" do.

>I worked professionally in radio and electronics.

Of course you did. In the "foreign service," right? :-)

[NBC likes the term "fleecing of America" and that might apply? :-)]

>A number of us here have done so or do so.

Yes. And? :-)

>What sets you apart is that you are a non-amateur who
>seems to get his jollies taking potshots at radio amateurs.

Only CERTAIN amateurs...such as those pretending to be radio gods
and the like. Look in a mirror to meet one.

The salient point should be that I am still here! There have been many
others participating in here that did not possess amateur licenses.
Most, nearly all in fact, quit, dropped out, probably in irritation at the
self-important personal wonderfulness expressed by those definitely
NOT representative-of-the-amateur-community-but-insisted-they-
ARE-amateur-radio. :-)

You can't handle persistence by others who oppose your viewpoints.

All you can do is attempt insult and demeaning of those persons
instead of addressing the subjects. QED most of today's mail package.

With all those many years of amateur radio experience you could have
been doing great things for U.S. amateur radio...instead of trying to
"get" certain personalities on this newsgroup. It's counterproductive
and wastes bandwidth and others' time.

>> You do NOT get to choose anything about what anyone is "supposed"
>> to say, to reply to, or anydamnthingelse. You keep thinking you do
>> every time you put on the SS uniform with the monocle. Try keeping
>> the armband off, it's so 40-ish.
>
>Get it straight, Len. This is an open newsgroup dealing with amateur
>radio. You are in no way involved with amateur radio. I am free to
>choose to respond to anything posted here and shall do so as the spirit
>moves me.

Get it straight, snarly dave. This is an open newsgroup, without any
moderator, accessible by anyone.

If you get honked by anyone with an opposing view, you can't fall back
on insults and pejoratives and nastygrams against the person instead
of the subject. THAT DOESN'T ALWAYS WORK. [obviously not...:-)]

Try not to "threaten" anyone. That only makes you look more like the
Waffen SS officer you seem to emulate.

Remember something which the gunnery nurse must have forgotten:
Do as the spirit moves you, NOT as the spirits move you.

If something doesn't work, stubbornness isn't a cure. You are doing
it WRONG when no results come. CHANGE.

>> Shave the head and learn to smile. That will make you more like
>> Colonel Klink. Lose several pounds too.
>
>As a last resort, you can always go to your strength and bring in the
>Nazi images.

Nein, Herr Robust, Wehrmacht, perhaps the military of Prussia of old,
not the "nazis." Das ist der "image" presented.

"That seemed to write itself." Remember that braggadoccio? :-)

>Let's see. Amateur radio newsgroup. I'm a radio amateur.

Congratulations. I'll bet you have a nice license certificate suitable for
framing.

>Now, back to
>the question: What does your comment have to do with Larry's amateur
>radio license and of concern is his job to you?

Back to your official position as Ding Dong Schoolmaster: Whoinheck appointed you anything that you can DEMAND answers? :-)

Quit shaking that ruler around. You can't slap anyone's wrist for writing anything in here. Try to realize that you are POWERLESS in that regard.

>It seems to be karma
>that forces you to live up to the N2EY profile of your likely actions.

TAFKA Reverend Jim has his own problems and those are not your concern. He's just another newsgroupie but with a bad case of thinking he has to comment on everyone's postings all the time. :-)

>Actually, old boy, you have quite the attitude toward radio amateurs.

ONLY to CERTAIN ones. Tag, you're IT. :-)

The best man at my wedding is still a radio amateur. The best work manager I ever had is still a radio amateur, now moved to mid-California where my wife and I were overnight guests. I don't have any "attitude" towards the group (or "community" as some wish to lump it), just CERTAIN INDIVIDUALS.

>You're insulting, rude and immature.

Self-professed gods seem to get that impression! TS. :-)

Tsk, tsk, tsk, "some things seem to write themselves," don't they?

>If you're waiting for radio
>amateurs to be impressed by your professional credentials, you're likely
>going to be disappointed.

Oh, my, judging all others by the things YOU do? :-)

Poor baby, haven't you realized that I am retired? I don't HAVE to "impress anyone." I did what I did. Now I don't have to take any BS* from anyone on how "important" THEY are. Neither am I "impressed" by complex radios or electronic systems, having been around many such things, some far more complex than any product of Ten-Tec. If you have one and are amazed by it, be my guest. Just quit making out How Good You Are Because You Have One.

I got into the whole big entire world of radio because it was very interesting, a fun job despite some obvious challenges in some technological areas. It also paid well if a good job was done. I got paid reasonably well. As TAFKA Rev. Jim once quoted: "It ain't braggin' if ya done it." I did it.

* abbreviation for Brussel Sprouts, used to avoid any "[expletive deleted]" quotations by the anal-retentive moralists.

>It wasn't a casual, throwaway mention and your newsgroup statements of
>the past are here for a long, long time.

Boooooo! Let it HAUNT you forever and ever! :-)

Like I've said many times, feel free to cut and paste everything I ever
wrote from Google archives. Get your own newsgroup if you like.
Will that cure your vindictiveness? I doubt it. You will be angry
anyway. It's your personality.

>I haven't changed my mind about you, Len.

Tsk, tsk, tsk, stubborn as they come (you should be sitting in front
of your orion when that happens).

You will NOT ever retract anything you've said, you will rationalize the
beejums out of what you said in order to make you look good to
yourself. Few give a darn. Feel self-triumphant as much as you want.
It's a free country. Except in this newsgroup where one MUST have
an amateur callsign officially bestowed on their cub scout uniforms
or claim they have one while remaining anomalous. :-)

>You're a victim of your own inertia and braggadocio.

Nope. Just a Fatal Attraction to balloon-popping of the self-important,
the self-grandiose, the self-proclaimed god-gurus of hum radio. :-)

That's so much fun! :-)

>To twist a phrase: If you haven't done it, it
>is most certainly bragging. You haven't obtained a license and aren't
>likely to do so.

Tsk, tsk, tsk, snarly dave. Still at it. You never learn.

I have obtained licenses (note the plural) in radio. Amateur hasn't
been one of them. That includes station as well as operator.

I may still get a hum license. I may not. Why is that a concern?

I'm still a citizen of the United States of America with all the rights
thereof. No self-important, self-officious SOB* is going to take
those rights away from me. At least one other SOB* tried but
failed (miserably).

Amateur radio is supposed to be a fun recreational activity involving
radio and the radio arts. From the actions of a few who do NOT
adequately represent the "amateur community," it seems to be a
vindictive group of ego-honed Cassius Clay imitators who assume
the invisible mantle of gods of radio. They should get better tailors
and see what happened to Muhammed Ali in later life. A few in
that category think that amateur radio is a "service" like the military
and assume rank and insignia demanding respect (and salutes).
Those should be arrested for impersonating officers. :-)

The ARRL does not adequately represent the "amateur community"
either since their published numbers indicate a decided member-
ship less than a quarter of all licensed U.S. amateurs. They like to
think they control everything but they don't. The more-public access

granted by the Internet has shown the FCC that the ARRL is just a special interest group and not really that representative.

* SOB: abbreviation for Son Of a Beeper, again for the morally outraged purists who want to keep everyone pristine and pure like they claim they are...

>Consider yourself stuffed.

It's after supper and I am adequately filled, thank you for your concern.

My wife is a good cook, we have a newly remodeled kitchen, a comfortable income and life, yet she scolds me for playing with the seven-year-olds in radio expertise in a newsgroup. She's right. :-)

Bye.

Have fun with your oriongasms.

>Entertain us with your credentials once again, won't you, Len.

How can I do it "again" when you didn't like it the first time?

Tell the stage manager to change the lights or maybe change
the flats.

Do something about the floor, please. It's all messy after you've
been amazing yourself sitting with your orion.

>Then tell us about that "Extra right out of the box".

Extras don't come in a box. They do it in front of orions.

>After more than seven
>years of posting your diatribes in an amateur radio newsgroup, you're no
>closer to obtaining even the most basic no-code amateur radio license.

Was never my intent to GET a ham license any class.

After seven years you are no closer to understanding that. You
desperately need to UPGRADE your neuron count! Download
some more from Ten-Tec. You can do it.

It is, Ding Dong Schoolmaster. I did just that in 1954. On SSB.

Very easy. Had to use English, though, language of the Waffen SS
wasn't allowed.

>> I guess it must not be
>> so wonderful, so popular after all.
>
>...but you'll have to continue to rely upon second-hand information.

No, the CIA.

According to the gunnery nurse, amateur radio is a super-secret
organization that ABSOLUTELY no one can know about until they
get their very own license and certificate (suitable for framing).

Send me a free copy of "Now You're Talking" and I'll study up on
the matter.

Do I need a DoD or Q Clearance to read that?

>dealing with amateur radio.

Yes, Janet Jackson's breast, U.S. foreign policy, the local weather, national societal morals to name just four common "amateur radio" subjects.

:-)

>You've delivered bushels of sermons here
>but you have zip to do with amateur radio.

And snarly dave has delivered tonnes of diatribes against individuals for having the temerity to disagree with a radio god such as He!

So...is there anything NEW? :-)

>Instead, you entertain us
>with tales of how the commercials do things and of your military
>exploits of fifty years back.

You don't seem very entertained? Shall I strap on my Haney plates?

"Military exploits?" I don't think I've ever exploited anyone while serving my country in the U.S. Army.

Okay, maybe a couple gals in Red Bank, New Jersey, but that was long ago, probably before you got diapers.

>Your claims of being here only to engage in civil debate on morse
>testing elimination ring very hollow.

The Ding Dong Schoolmaster done ring his chimes!

Snarly dave, don't they have any rest homes in your neck of the woods? You could go out there and berate some Alzheimer's patient about losing their memory and not getting a ham license.

Better yet, accost an Orthodox Jew and start lecturing them about ham.

That's your style, what else you do for kicks? [as if anyone cared]

Go play with your orion. Amaze yourself. Have an oriongasm.

Keep on truckin, radio pioneer.

Make sure that all other hams keep the Faith and worship regularly
at the Church of St. Hiram, beeping in mass formation, following
the catechisms of morse down to every procode, pledging allegiance
to the league and the morse code.

Above all, force everyone to accept present law as a Divine one,
never to be changed by mortal man, that morse code testing
shall remain forever and ever. That is the Way of True Faith of
the American Amateur. According to the Church of St. Hiram.

Status quo uber alles...unless the BoD changes their mind again.

I only degrade the biodegradeable amateurs in here.

You know, the Few, the Overly-Proud, the (white) Men of the
Amateur Copse waving in the breeze of their own unoriginality
bravely holding to the standards and practices of 1930s
amateurisms but bragging they are state of the art by buying
the latest radio toy designed by someone else and built by
someone else and thinking they are potential Nobel laureates
for doing so.

You biodegradeables get your jollies not by operating them radio
toys so much as acting like you are radio gods in here and
snarling degredations at others who don't have your lofty
opinions. Worse yet, you aren't even original in your perjoratives.

>> Didn't you forget my claim that I was going to invent anti-gravity?
>
>Haven't heard of that one. Don't worry too much though. It can't make
>you look any more foolish than your "Extra right out of the box" claim.

Said that once before. You can find it in Google (you were going to
cut and paste everything I ever wrote before in here...that will be
included).

I'm still working on anti-gravity. Something is holding me down, though.

>> Now sit down in front of your orion, snarly dave. Amaze yourself.
>
>I do that quite frequently, Leonid.

Herr Robust, you need to get some radio technology EDUCATION.

In the KH2D gentle way of beginning such, here's a basic formula to
memorize: E = I * R where E is voltage, I is current, R is resistance.

Got that? No? Too complex for you? It's very, very basic law.

Fella named Ohm came up with that. Lot's of others accept it...does not have to be explained by Ten-Tec on their website.

That's just the beginning. We can work on components of radios later, all the amazing things that happen behind the front panel using L and C and things called "transistors" and "integrated circuits!"

Isn't that something, though! "Magic" happens when you move knobs and switches in the correct way. Electrons can do your bidding and create fields and waves in free space!

Did you know that others have made actual electronic surrogates for adding machines and calculators? Yes! A long time ago, even before WW2 in Ohio, courtesy of John Atanasoff (forgive me if I spelled it wrong, John, you are not a Hun). I even have one on my watch! That watch has no moving parts and tells time very accurately.

Well, here's the most amazing magic of all: Others have found ways to combine those electronic calculators and "magical" radios. Those are called "SDR" or Software Defined Radios!" Memorize the word "software" in that acronym. Learn the difference soft versus firm.

Yes, it's true! In the office here is a "radio clock," no moving parts, battery powered, that tunes itself in to WWVB after midnight, corrects itself if necessary according to NIST's prime time standard, gives the date, day, compensates for leap years, even the "leap second" and (additionally) tells the office temperature! Sunnavagun. All that and the display doesn't have to glow!

That one is big, easy to read from anywhere in the room, have had it for a year. There's a smaller one in the other room, had that for three years, does everything except for the room temperature. Each one cost less than $30. No moving parts. No controls need be touched to be accurate to within one second every day. No license needed, no morse code required to have one or use one!

A little microcontroller inside each radio clock is the heart; a quartz crystal is the heartbeat and NIST's atomic standard of time and Boulder Colorado transmitter is the pacemaker. You know how to program a microcontroller, snarly dave? I do. We can work on your learning basic computerstuff later...first you have to master radio technology (a snap since you've passed your 20 WPM morse test).

Later, much much later, you can approach basic programming and its application to SDRs of the future. Note: There's a little micro-controller at the heart of nearly every over-the-counter ham radio today. Has "magic" in it...but later we will discover that it isn't any legerdemain, just some digital logic arranged in a logical way so that imagination and innovation can be used to make that micro-controller do your bidding!

Just think. The future has promise for you. Not only can you expand your efforts at trying to make people do your bidding, but you can make electronics do your bidding also! Another heaven for radio gods and control freaks!

Now, you just set yourself down in front of your orion (named for the mythical but mighty hunter) and imagine what you can do in the future. Once you learn some basics. Lots of basics. Remember that electrons don't care squat about all your pretty certificates or years as an amateur anything, cannot be influenced by human emotions or egos, will only obey THEIR laws, not those of the ARRL. Excuse me, FCC. Success is yours ahead. Just not at the rate you are going.

[the offer on the bier is still there...can you take that lying down?]

Thanks for the laffs, snarly dave, but Don Rickles doesn't have
to worry about you stealing his act.

You have the moronic insult of "insult humor" down pat, but grade
ZERO on the humor part. Work on that.

Hello? Are you alive? I said "interested in radio," non-compost-
mentat-intellect.* ALL of it, not just amateur activities. I got into
a lot of the rest of the world of amateur radio, lots more than you

you ever did while engaged in the Fleecing of America as a
"foreign service" member.

* Those who've never read Frank Herbert's "Dune" novels will
not understand the pun. Those should go back to ancient Ayn
Rand.

>> >Nope. Nothing about your obtaining an amateur radio license here.
>>
>> Oh? Is this a requirement to be in the electronics industry?
>
>Was that under discussion? I could have sworn that amateur radio was
>the topic in which you decided to submit your PROFESSIONAL credentials.

Nooooo. You got it WRONG again, herr robust.

I've submitted my professional credentials to professional organizations
and got the jobs. Unlike some in here bragging of their "human
resources" fantastic grades and abilities and then going out and
becoming bus drivers. I'm still getting the professional jobs but the
work isn't as intense as before now that I don't keep regular hours.
It's fun, challenging work. You ought to try that sometime...a heckuva
lot better than spending "foreign service" time fleecing America in
some backwater African country.

>> Strange, isn't it, not one single personnel person (that's "human
>> resources" profession to bus drivers) said anything about needing
>> any amateur radio license to work in electronics or aerospace.
>
>You must want alt.jobs.wanted.aerospace.

Nooooo. I can get all kinds of jobs involving electronics and even
radio. I don't care to. I've had a full career as an electronics
design engineer. My income isn't all from the U.S. Treasury as a
"foreign service key person." [did you change the locks often
while a key person?]

>> Where is "here," snarly dave?
>
>Right there.

Where is "there," snarly dave? Illustrate your point. :-)

>That is incorrect, Leona. You have your facts scrambled. I'll be happy
>to quote the post if you're having trouble remembering.

What are you going to state as a "location" next, elsewhere? :-)

Feel free to cut and paste every single post, word for word, from
Google to illustrate whatever blunted point you think you have.

All you will do is annoy all the other readers, the regular
newsgroupies. All you will do is demonstrate that you have ZERO
originality, ZERO creativity, are nothing but a bundle of overly-

proud puffery, vindictive almost to the gunnery nurse's standards.

You really ought to TRY to get close to the subjects in this newsgroup, not just being an exhibitionist for over-the-top raging vindictiveness.

>I understand that. There is an amateur license available which requires >no morse test. It requires a pretty straightforward written test. You >haven't tackled it.

Explain WHY that is some kind of "requirement."

This is a newsgroup with open access, no moderator, straight-forward (except for some PCTAs bent over backwards to get back to the 1930s). No license of any kind required here. Not even poetic license.

You have NO concept of the discussion over the retention or elimination of the morse code test. All you can think of is an unyielding spit-de-corpse adherence to the very same rules you had to follow long ago in order to get that treasured and adored federal merit badge. Your insistance on all of present day to Get The Morse Test or even Get A Ham License makes you a prime believer worthy of the Waffen SS. Do not think! Follow orders! Yap! Yap! Bark! Bark!

All that for a radio HOBBY... :-)

>You provided? Your statement seems at odds with the other definitions
>in existence.

Poor baby. You've never programmed a PLD or even erased and
re-burned an EPROM, have you? You don't know what "microcode"
for a minicomputer is (the instruction set decoder and router) and
haven't programmed a single CPU

You haven't had an associate membership in the ACM and I'll bet
you don't know what the acronym stands for. Your acrimony stands
in the way of understanding acronyms not defined by ARRL.

Put you in front of a Microchip PIC Assembler Development Program
and you would be LOST, even for the "entry-level" PIC, the 16F84.
You wouldn't know any details of the PIC 16F71 that AADE uses
(it's used in Neil's neat little frequency counter sold to many hams).

You don't know the difference between Assembler and Interpreter
and Compiler programs, haven't done squat about learning any of
that, or using them in any sort of designed-by-self application, yet
you have the puerile perfidy to accuse working electronics
engineers of "not knowing something."

All you can do is BEEP, little fella, and walk around stuffy and
like the south end of a mule going north bray a bunch of nonsense

you don't know about. You talk only bullstuff BLUFF, herr robust.

>I'll take that as your only way of conceding a point.

Noooooo. Snarly dave, you just can't take anything.

Your idea of "concession" in opinions is to CONCEDE to your
nonsense BLUFF at knowing anything about electronics-radio
hardware and theory.

>I'll bet it is, especially when you have no material. You'll have to
>fall back on your usual, the tap dancing routine.

Had a pair of Haney Plates once...but you have NO idea what
those are, either, do you?

Snarly dave, to make amends, I'd like to buy you a bier...except
I know you wouldn't take that lying down...

>moments, though!

You had a safelight? I was so poor I had to catch fireflies and keep
them in an old jelly jar for a safelight. Only had the red-orange fire-
flies in my growing-up town, no green. :-)

I'll omit mentions of Microdol, forced development to extend Super-
XX film speed, Promicrol film developer or FR monobaths, the lovely
odor of acetic acid stop-bath, DuPont Varigam filters, bulk-load 5-
roll-packs of 35mm and double changing bags, SLRs and the
ability to hold depth-of-field as you wanted it while composing the
picture in the pentaprism viewfinder. Those have nothing to do with
amateur radio policy discussions about Janet Jackson's breast
or her sister Michael.

I still have the old developing trays and print dryer, long since
converted to etching trays for PCBs and a heater for the trays to
use the last, loaded ferric chloride etchant in the jug. All my
photography has gone digital and "processing" done in the
computer.

All but one of the PCTAs in here buy ready-made rigs, don't
make their own. The holdout PCTA "designs his own ham
equipment" such as the Elecraft K2 kit he made. :-) All are
"advancing the state of the amateur art" and showing "the unique
ability of the amateur to extend good will" (as stated in FCC's
47 C.F.R. 97.1). :-)

How a boot dat, ey? :-)

Oh? There was a QUESTION?!?!?

Herr Robust is now the Questionmeister in here?

Ach zo! Seig heil das questionmeister! Gruss gott.

>Because you were asked about them and responded with some drivel about
>PSK-31.

Drivel questions get drivel answers. That's only fair...

>Yes, I'm a radio amateur. You got that much correct.

Amateur...not only in radio. :-)

>N2EY: "Besides, here's a simple, plain fact:

Bleep bleep expletive deleted... :-)

Still no signs of originality. Tsk, tsk. Have you thought of attending an
adult night school class in Written English?

>I am a proud radio amateur and I spent a career in radio as a
>professional. You, on the other hand...

PROUD! Do you have dress blues you wear with a ceremonial
sword? Do you sing "The Amateur's Hymn" and say catch-phrases
like "distemper fidelis?" Do you celebrate Hamorial Day at the
Tomb of the Unknown Amateur? A little hamflag flutters from
the amateur antenna of your SUV? You attend Mass formation at
the Church of St. Hiram every Field Day?

Is your First General Order "I shall key my code in a military manner, keeping always on the alert and observing all the stations within sight and hearing?" Do you do close-order drill with slung HTs?

Snarly dave, I betcha you got one of those shiny shield badges that proclaims you a "raddio kopp" in a neat real-leather buzzer holder!

I'll bet you go up to strangers on the street, grab them by the collar and shout "I am fully authorized by the federal authorities to operate a ham radio station!" Must make you feel proud as all-get-out.

Official. Authoritative. Boring. Get out.

>> >You don't seem to be able to
>> >address the question about wideband modes.
>>
>> It is at 79 Wistfull Vista.
>
>...Apartment PSK-31.

Such a baby. "79 Wistfull Vista" was the address of Fibber McGee and Molly. Old radio show. Entertained millions once a week on radio. You are too young to hear of it? Tsk, tsk. On RADIO, snarly dave, on RADIO. You missed all that fun while prepping for your rank, status, privilege as a mighty macho morseman as a fully authorized (by a federal government) radio AMATEUR!

I now return control of the newsgroup to amateur radio policy subjects such as Janet Jackson's breast...

The new CEPT T/R 61-02 recommendation has
been adopted by vote during the last
CEPT meeting on this week. The new text
will be on http://www.ero.dk next week.

Bye bye CW !

You're right - MUST have been an imposter. Since the same
disincentive has been in place since 1912, I can't imagine TAFKA Rev.
Jim flubbing up like that. Not in a million years.

Whoever forged that post had to have been a complete moron.

My apologies to TAFKA Rev. Jim.

I gotta get cable...

> They put them on late at night when
>the kids are in bed, and any viewing is strictly voluntary. No one harmed.

I agree 100%, Mike, but I'd put it this way:

The big problem isn't the content but whether it's expected or not when the
viewer tunes in. Shows like "Sex in the City" and "Coupling" pretty much
tell you what to expect by the name of the show. Other shows have warnings,
ratings and writeups in the program guides.

The problem with the "wardrobe malfunction" was that nobody expected it except
Ms. Jackson. Yet she will not incur any fine or penalty. That's just wrong.
>
>Everything in it's time and place, and the superbowl isn't the time or
>place IMO.

Agreed - particularly without any warning.

Some may say this whole thing ahs nothing to do with amateur radio policy, but
the exact opposite is true. The big problem with that "wardrobe malfunction"
was its unexpected nature. Since amateur radio is unscheduled, crosses time
zones and no licensee owns a frequency, the standards of all amateur on-air
activity have to be "G-rated".
>
> The NFL has been trying to pander to a different audience the last few

>much physical punishment.

I disagree! Beating children simply means the beater can't think of
a better way to deal with the kid.

It also teaches the kid at a very primeval level that violence is a
legitimate method of getting what you want from others.

>Worst form of abuse for todays kids is to let'em grow
>up with no self control or discipline. That was true in earlier generations,
>too.

I agree 100%, except that I'd call it "neglect" rather than "abuse". And in
some cases neglect is worse because it tells the kid he's not worth bothering
with.

>Look at Bill Clinton and, for that matter, the younger days of our current
>President.

Not just the younger days, either.

So all our Leonard needs do is move to Canada and see if professional
credentials are recognized there. Then he can apply for an amateur
radio license.

It does not work that way here nor should it. With Len's professional
credentials, it should be a snap for him to obtain an amateur radio
license in his own country. The fact is, Len doesn't care about
obtaining an amateur radio license. He is only a self-appointed
advocate for change in an endeavor in which he is not a participant.

> It would seem to me that this makes perfect sense - radio operation is

I'm not so sure about that. I've had communications professionals try
to have me QSY an RTTY circuit from a 9 MHz frequency in late afternoon
to a 24 MHz frequency for a path which was only several hundred miles.
Most hams with any experience can tell you that such a path regulary
requires lower frequencies, not higher ones.

> After all, the testing done for Amateur licences today is pretty easy

If it is so easy, a (and let me use Len's term) RADIO PROFESSIONAL should have no trouble at all passing it. What would be the motivation for a licensing "gimme"?

There is no such mechanism available in the United States. A U.S. citizen licensed in Canada may not use his Canadian license when operating from the U.S.

If it is a big deal for a segment of the population, it is a big deal
for the network, the FCC and MTV.

> Read the article that I referenced, if you have time - it presents an
> interesting perspective on what tends to constitute "obscenity". Sex
> bad, violence good - you know. And, as always, Jack Nicholson's

I've not read or heard anything about obsenity being the issue. The
halftime show was quite inappropriate. Everyone is making the noise
about Janet Jackson but the lyrics used by P. Diddy, Nelly and Kid Rock
were offensive. Kid Rock's defacing of the American Flag and his use of
it as a poncho were offensive.

> Example - I watched a bit of "Full Metal Jacket" on TBS a while back.

Songs about the use of women as sexual objects, about multiple casual
sexual partners, about the glorification of drug use, drinking and
criminal behavior in a public performance on prime-time TV are among the
things I'd rather children didn't see or hear because they cater to the
lowest, base side of humanity.

Young Don Newell was the crucifer one Sunday at St. Andrew's Episcopal
Church in Oak Hill. After the processional and after my father had
begun the service, Don fished a tiny crystal radio from his cassock,
stuffed the earphone into his ear and attached a wire with an alligator
clip to the cross. As the service ended, my dad whispered to him, "I'd
like a word after church".

> You brought back a lot of hilarious memories of "electronerd

Well, in my case it was a one-time Christmas deal--the one BIG present
and that was second-hand from Allied's big, used equipment list. The
receiver I saved for was also from the same list. More newspaper
deliveries, an after-school job at the local hobby shop several days
each week and the writing of a sports column for the local newspaper
provided coaxial cable and connectors, a key, antenna wire and the
like. Some of that money was also spent on a big U.S. call area map and
some (sorry, no choice of color) QSL cards from WRL.

I used Jesse's outgoing card forwarding service in the days preceeding
the ARRL's outgoing bureau.

> Speaking of QSL card handling Joe Arcure W3HNK is in this
> neighborhood, I gotta look him up.

Joe used to be a regular at the DX hospitality suites at Dayton. I
haven't seen him in a number of years.

All of this nostalgia has me fired up to grab my collection of the West
Coast DX Bulletin to re-read some of Cass's gems.

True, but I guess that our Government trusts those who have achieved a
commercial licence to look these things up before going on the air.

Or are you aware of specific instances where this policy has caused a
problem?

>>>
>>>> And, if you make a few mistakes along the way, or if it takes a week

Creative reading, Jim !

>>
>>Being a licensed professional in radio implies a knowledge of radio
>>theory and concepts - many of which are tranferrable from one area
>>(commercial) to another (amateur).
>
>Some. Not many.

Electronics is the same in both areas - the rest is regulations ad
protocol, which can be learned quite easily. Most folks I know have
had the most trouble with the electronics theory - not learning the
regs or operating procedures!

>

>Makes all the difference in the world.

Really? That's the most ridiculous statement I believe that I have
ever heard! The tech working on a $500,000 base station is less
committed or less competent than an amateur operator because he did
not buy it with his own money?

It's his career, Jim. Vastly more important than a hobby.

>
>>If you get the opportunity, have a look
>>inside a cellular base station sometime - all of the equipment in
>>there is computer controlled
>
>Which means no licensed operators are needed at all.

Absolutely correct - those licenses are no longer issued for most
radio professions, Jim - you told me that!

>

>>impedance though - no wonder the watership went down!
>
>You obviously never read the book.

I did - twice, out loud. Just humour, Jim - you should try it
sometime! :)

As I recall, the book involved a bunch of rabbits looking for a home,
and avoiding danger. Perhaps, in your edition of the book, the
rabbits learned about electromagnetism and current flow and morse code
and band edges and operating protocols and Q-codes and mathematics and
perhaps a smattering of quantum mechanics along the way.

In the version I read to my kids, there were a bunch of rabbits
looking for a home.......and avoiding danger......the end.

>>
>>>> Good memories, though - like a sponge!
>>>

That's not quite what I said, Dave. If a Canadian with a Commercial
licence obtains an Amateur licence vis this program, that Amateur
licence is covered under the existing reciprocity agreement - it is a
standard Amateur licence.

Your point is interesting, however - one need only be a resident of
Canada to qualify for an amateur license - not a citizen. If a US
citizen living in Canada obtains a Canadian amateur license, how would
that be illegal to use in the US?

And the argument is null anyway. If beating your kid worked, you would
only have to do it once or twice.

In fact, I was recently enlightened to the fact that (I hope this
doesn't invoke Godwin's law!) Saddam Hussein, Joseph Stalin, and Adolf
Hitler have one thing in common. They recieved regular beatings as children.

>>Worst form of abuse for todays kids is to let'em grow

> with.

And discipline doesn't have to be beatings! Sit a kid on the couch for a
couple hours with no entertainment, and they'll come around. Sounds
simple and a little stupid, but it works. I got "wailed" on occasion as
a kid, and while it hurt, once it was over, big deal. All it taught me
was it was a good idea to not get caught, and if I could delay the
punishment until the punisher cooled down, I wasn't as likely to get
hit. That last part is telling in itself.

You'd better re-read it, Leona. A question reading "at which age did
you pass an amateur radio license exam?" is not a general statement. It
is a specific question. Your answer included "Got several others".

That has zip to do with an amateur radio exam. You seem to have
straight lined.

> >> Snarly dave, I don't care about your amateur wonderfulness and

Uhhhhh, I'm not a newsgroup.

> Snarly dave, I said I don't care about YOUR amateur wonderfulness.

Be fair, Leonidas, you don't care about anyone's amateur wonderfulness.
It is quite apparent from your posts of these eight or so years.

> YOURS, snarly dave. You are NOT U.S. amateur radio. [thank
> the Lord...the League membership drive would be in hell if so...]

Oh, but I'm very much a part of U.S. amateur radio and I've been part of
amateur radio in five other countries. You aren't part of amateur radio
anywhere on the planet. You aren't a part of the ARRL. Your
connections to amateur radio are simply that you've commented to the FCC
about the service in which you do not participate and that you post
here.

> >It is clear that you are not a radio amateur and that
> >you are not, after all these years, "getting into amateur radio".
>

> and some kind of perverse "unquestioning love of a service" that
> is supposed to be a fun, recreational activity about radio. As a
> result you spend hours and waste Internet bandwidth insulting all
> those who do not agree with your wonderfulness, etc.

Unquestioning love? You haven't demonstrated interest enough to obtain
the most basic license available. Waste of internet bandwidth? My

total newsgroup posts over eight years wouldn't equal more than a couple of weeks of your insulting output. Quit wasting bandwidth *snicker*, Leonard.

> >Haunt
> >some radio professionals, using the endearing manner you've displayed
> >here and see how long they put up with your condesent.
>

I'll defer to you as the expert condescendent here.

> I've worked with professionals in radio and electronics a long time
> and they don't come across with the kind of stuff you and the
> gunnery nurse and other "proud SERVICE members" do.

You've likely kept some of your insulting behavior in check when around them then.

> >I worked professionally in radio and electronics.
>
> Of course you did. In the "foreign service," right? :-)

That's right, though it is "Foreign Service"; and in broadcasting and in the military and in industrial electronic component sales.

> [NBC likes the term "fleecing of America" and that might apply? :-)]

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

> >A number of us here have done so or do so.
>
> Yes. And? :-)

...and did you have trouble connecting the earlier sentence with the one below?

> >What sets you apart is that you are a non-amateur who
> >seems to get his jollies taking potshots at radio amateurs.
>
> Only CERTAIN amateurs...such as those pretending to be radio gods
> and the like. Look in a mirror to meet one.

The facts would prove that untrue. Terms like "Hum Radio", "beeping", "Church of St. Hiram" would indicate otherwise. As to the radio god thing, you have, in the past, said that I was a god, then that I wasn't a god, then that I was a god, then that I wasn't a god. Why don't the

several of you inhabiting the tired old body of Leonard H. Anderson come
to some sort of concensus?

> The salient point should be that I am still here!

Well, it is A salient point but I wouldn't call it THE salient point.
I prefer to think of it as an unpleasant reality.

> There have been many
> others participating in here that did not possess amateur licenses.

I can think of only a couple. Did they all have multiple personalities?

> Most, nearly all in fact, quit, dropped out, probably in irritation at the
> self-important personal wonderfulness expressed by those definitely
> NOT representative-of-the-amateur-community-but-insisted-they-
> ARE-amateur-radio. :-)

The more likely scenario is that either decided that they really weren't
interested in amateur radio or they have become radio amateurs. You're
the rare exception who can't seem to make up his mind :-) :-)

> You can't handle persistence by others who oppose your viewpoints.

Really? I've been responding to your posts since 1996. When will it be
determined that I can't handle you?

> All you can do is attempt insult and demeaning of those persons
> instead of addressing the subjects.

I've done both. Insulting you and demeaning you aren't hard, take
little time (compared to the body of work you've undertaken over the
past eight years) and are richly rewarding. You are to amateur radio
what a chainsaw is to surfing.

> QED most of today's mail package.

I sent no packages in the mail today.

> With all those many years of amateur radio experience you could have
> been doing great things for U.S. amateur radio...instead of trying to
> "get" certain personalities on this newsgroup. It's counterproductive
> and wastes bandwidth and others' time.

For a "PROFESSIONAL IN COMMUNICATIONS" you don't know much. There is no
wasted bandwidth. It is either there or not there. Beside that, I pay
for my access. Don't you? I've done my share for the DXing community
within amateur radio. What have you done for amateur radio in, oh,
let's say the past eight years of posting here?

> >> You do NOT get to choose anything about what anyone is "supposed"

Ummmm, isn't that what you do here?

> >Actually, old boy, you have quite the attitude toward radio amateurs.
>
> ONLY to CERTAIN ones. Tag, you're IT. :-)

Only certain folks, like those involved in "Hum Radio" and those who are
ARRL members? Only those who support morse code testing? Only those
who disagree with you on the issue of a minimum age for the amateur
radio in which you are not a participant?

> The best man at my wedding is still a radio amateur. The best work
> manager I ever had is still a radio amateur...

...and in all this time, you STILL aren't licensed. That must be a
pretty bitter pill.

> now moved to mid-
> California where my wife and I were overnight guests. I don't have any
> "attitude" towards the group (or "community" as some wish to lump it),

The group of individuals grows ever larger.

> >You're insulting, rude and immature.
>
> Self-professed gods seem to get that impression! TS. :-)

I've never made such a profession. The only person who has done so
(you), has seen fit to reverse himself a number of times. :-(

> Tsk, tsk, tsk, "some things seem to write themselves," don't they?

A lot of your stuff seems to write itself.

> >If you're waiting for radio
> >amateurs to be impressed by your professional credentials, you're likely
> >going to be disappointed.
>
> Oh, my, judging all others by the things YOU do? :-)

Er, I don't believe I've ever expected radio amateurs to be impressed by
my professional credentials.

> Poor baby, haven't you realized that I am retired?

Oh, I've realized it, Len. Nobody but a person with lots of empty time
on his hands could produce your r.r.a.p. output.

> I don't HAVE to
> "impress anyone."

Lucky for you that it's so. It hasn't prevented you from trying though.

> I did what I did. Now I don't have to take any
> BS* from anyone on how "important" THEY are.

If, by important, you mean that they hold amateur radio licenses and you
don't, I'm afraid you're wrong. You do have to take it, and often.

> Neither am I
> "impressed" by complex radios or electronic systems, having been
> around many such things, some far more complex than any product
> of Ten-Tec. If you have one and are amazed by it, be my guest.
> Just quit making out How Good You Are Because You Have One.

wHat GaVE yOu ThE idEA THat i bEliEVe ThAT I tHiNK i'M gOOd BeCAusE I
"hAvE onE"? It's more like: "I have one and it's good". You aren't
impressed with it because 1) you don't have one and 2)you don't have a
license to use one.

> I got into the whole big entire world of radio because it was very
> interesting, a fun job despite some obvious challenges in some
> technological areas. It also paid well if a good job was done. I got
> paid reasonably well. As TAFKA Rev. Jim once quoted: "It ain't
> braggin' if ya done it." I did it.

But if someone else did anything, you are quite ready to prove the
validity of the N2EY profile of your likely actions. When it comes to
amateur radio, you didn't do it.

> >It wasn't a casual, throwaway mention and your newsgroup statements of
> >the past are here for a long, long time.

Your permission isn't required. I've quoted some of your material from
time to time. So have others.

> Get your own newsgroup if you like.

I'm quite content here, thanks. I am, after all, a radio amateur.

> Will that cure your vindictiveness? I doubt it. You will be angry
> anyway. It's your personality.

Thus sayeth, the original Grumpy Old Man.

> >likely to do so.
>
> Tsk, tsk, tsk, snarly dave. Still at it. You never learn.
>
> I have obtained licenses (note the plural) in radio. Amateur hasn't
> been one of them. That includes station as well as operator.

None of the "plural" has anything to do with amateur radio. You are to
amateur radio what a butter churn is to house painting.

> I may still get a hum license. I may not. Why is that a concern?

Gee, I dunno, Mister "Extra right out of the box", poster of eight years
worth of inexperienced views on how amateur radio should be regulated.

> I'm still a citizen of the United States of America with all the rights
> thereof. No self-important, self-officious SOB* is going to take
> those rights away from me. At least one other SOB* tried but
> failed (miserably).

Let's see. You have the right to be heard by your government. Check.
You have the right to post here. Check. I'm sorry, I can't find the
rights addressing freedom from disagreement, derision or laughter.
Maybe you can post them in your free time.

> Amateur radio is supposed to be a fun recreational activity involving
> radio and the radio arts.

You'll have to take my word for it, Leonard. It is all of those things
and more.

> From the actions of a few who do NOT
> adequately represent the "amateur community," it seems to be a
> vindictive group of ego-honed Cassius Clay imitators who assume
> the invisible mantle of gods of radio. They should get better tailors
> and see what happened to Muhammed Ali in later life.

Any radio amateur is part of the amateur radio community. You are not a
part of that community. You can't even decide who is a god or not a god
within that community. I'll give you a hint. It would likely not be
someone from outside the community.

I checked up on Muhammed Ali. Like you, he never became a radio
amateur.
Unlike you, he never tried to tell radio amateurs what was good for
them.

> A few in
> that category think that amateur radio is a "service" like the military
> and assume rank and insignia demanding respect (and salutes).
> Those should be arrested for impersonating officers. :-)

What's the penalty for impersonating a radio amateur?

> The ARRL does not adequately represent the "amateur community"
> either since their published numbers indicate a decided member-
> ship less than a quarter of all licensed U.S. amateurs. They like to

You tell 'em, Len. YOU CONTROL everything in amateur radio *snicker*.

> The more-public access
> granted by the Internet has shown the FCC that the ARRL is just a
> special interest group and not really that representative.

You are to the ARRL what you are to amateur radio, not a participant.

> >Consider yourself stuffed.
>
> It's after supper and I am adequately filled, thank you for your concern.

> :-)

I'll bet she says that when you play with the seven-year-olds in the neighborhood too. :-) :-)

It must be nice having the only wife who is a good cook, the only folks with a remodeled kitchen (what was wrong the old one?), the only one with a comfortable income and comfortable life. The rest of us are envious, I'm sure. Tell us about your ham shack, won't you?

> Was never my intent to GET a ham license any class.

Your boast of getting an "Extra right out of the box" was an empty one?
Your description of several decades of interest in amateur radio was a
falsehood?

> After seven years you are no closer to understanding that.

The difficulty I'm having understanding it probably has something to do
with the discrepancy in your story.

> You
> desperately need to UPGRADE your neuron count! Download

Nope, Ten-Tec has no neuron upgrade page. They do have one for firmware
upgrades. You do understand what firmware is, don't you?

My flies all died, so I bought the light. It was so dim, it took
about 10 minutes before you could vaguely see anything at all in the
darkroom. Finally gave up and learned to load the tank by
feel....still remember the bright light (caused by static electricity,
I suppose) when removing the tape at the end of the 620 film, securing
it to the backing paper......looked pretty cool in the dark!

> three years (?) or so ago. :-)

Yup, we have them too - and there is a big fanfare when anyone under
the age of 16 tests for a license. Which makes sense - we are trying
to encourage young kids to get interested in the hobby, so that it
doesn't die out.

Doesn't mean that we should make the testing process so easy as to be
meaningless, though! Or deify kids who manage to memorize their way
to the top.....

Agreed - I see the Amateur license as an authorization, not
qualification. A license to learn, per se....not proof that the
learning has been completed.

There's your problem! In the post to which you responded, amateur radio
was indeed under discussion.

> >You've delivered bushels of sermons here
> >but you have zip to do with amateur radio.
>
> And snarly dave has delivered tonnes of diatribes against individuals
> for having the temerity to disagree with a radio god such as He!

Again, Leona, my total posts in eight years would equal about two weeks
of your newsgroup output. Have the several of you reached a concensus
yet as to whether I'm a radio god?

> >Instead, you entertain us
> >with tales of how the commercials do things and of your military
> >exploits of fifty years back.
>
> You don't seem very entertained? Shall I strap on my Haney plates?

Which ones--the decorative light switch plates by Anne Haney, the
photographic plates from the R.J. Haney Heritage Park, or "The Optimist"
plates by Jill Haney? No matter, strap 'em on. It'll spiff up your
act.

> "Military exploits?" I don't think I've ever exploited anyone while

> for doing so.

A few questions (DEMANDS) of you, Leona:

What constitutes "Overly-Proud" and why is the term capitalized?

Do you consider yourself to be of a racial group other than white?

Do you know of anyone who has indicated that hethinks of himself as a Nobel laureate because he bought a radio transceiver which is unequalled in amateur radio equipment?

> You biodegradeables get your jollies not by operating them radio
> toys so much as acting like you are radio gods in here and
> snarling degredations at others who don't have your lofty
> opinions. Worse yet, you aren't even original in your perjoratives.

You're biodegradable, Len. Your definition of "radio god" seems to be "one who is not in agreement with the views of Leonard H. Anderson". How do you determine from reading lines of typed characters, when someone is snarling? Are you snarling when you post here? Do you hold "lofty" opinions? How do you determine when the opinions of others are "lofty"?

> >> Didn't you forget my claim that I was going to invent anti-gravity?

>The ball is in your court. Only three options exist unless you can provide
>a real 4th option.

OK, do this:

Leave General, Advanced and Extra privs alone.

"NewNovices" get privileges to be described elsewhere.

Existing Novice privileges change to those for "NewNovices"

Below 30 MHz, existing Tech Pluses get the same privs as "NewNovices".

Above 30 MHz, existing Techs and Tech Pluses continue to have what they have now. (everything)

If it decided to eliminate Element 1 for the "NewNovice", then Techs would get "NewNovice" privileges below 30 MHz.

Simple, easy and no giveaways.

Suppose we do my Option 4.

FCC has to keep track of four privsets below 30 MHz and 2 above.

You wouldn't know humor if it smacked you in the forehead--Oh wait, it
DID!

> Hello? Are you alive? I said "interested in radio," non-compost-
> mentat-intellect.* ALL of it, not just amateur activities.

You might have written that at some time. You also wrote of your
decades-long interest in *amateur* radio.

> I got into
> a lot of the rest of the world of amateur radio,

Let's get this straight. You got into the rest of the world of amateur
radio? When was this?

> ...lots more than you
> you ever did while engaged in the Fleecing of America as a
> "foreign service" member.

Well, you've managed to live up to the profile yet again.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

Oh, it won't be a blunted point, Leonard. It'll be quite direct and to
the point.

> All you will do is annoy all the other readers, the regular
> newsgroupies.

I think a goodly number of them are entertained, Leonard.

All you will do is demonstrate that you have ZERO
> originality, ZERO creativity, are nothing but a bundle of overly-
> proud puffery, vindictive almost to the gunnery nurse's standards.

Ahh, the plaintive cry from the bottom of the Extra box.

> You really ought to TRY to get close to the subjects in this
> newsgroup, not just being an exhibitionist for over-the-top raging
> vindictiveness.

You decide to give someone a tweak, Leonard and a tweak will likely come
your way. You tweak enough folks and lots of tweaks will come in
return.

> >I understand that. There is an amateur license available which requires
> >no morse test. It requires a pretty straightforward written test. You

> >haven't tackled it.
>
> Explain WHY that is some kind of "requirement."

Okay. The FCC will not permit you to operate under Part 97 without it.

> This is a newsgroup with open access, no moderator, straight-
> forward (except for some PCTAs bent over backwards to get back
> to the 1930s). No license of any kind required here. Not even
> poetic license.

Oh, you misunderstood. No FCC license exam is required for newsgroup access. You do have to understand though, that newsgroups are not amateur radio.

> You have NO concept of the discussion over the retention or
> elimination of the morse code test.

> All you can think of is an
> unyielding spit-de-corpse adherence to the very same rules you
> had to follow long ago in order to get that treasured and adored
> federal merit badge.

The rules under which I received my Novice, General, Advanced and Extra license are no longer the rules of today. Yep, I treasure and adore my federal merit badge. You don't have one, do you?

> Your insistance on all of present day to
> Get The Morse Test or even Get A Ham License makes you a
> prime believer worthy of the Waffen SS.

The Waffen SS? You mean that arm of the old Prussian military? You don't have to obtain an amateur radio license though doing so would take some of the egg off your mug after that "Extra right out of the box" brag you issued. Obtaining even the most basic amateur radio license might provide you with a bit of credibility in your quest to mold amateur radio licensing to your way of thinking.

Do not think! Follow
> orders! Yap! Yap! Bark! Bark!

> All that for a radio HOBBY... :-)

You mean the hobby which has licensing requirements unmet by you? Yeah, all that.

Yada, yada, yada. You can't rant and froth but you can't hide (your
lack of knowledge of the term "firmware").

> All you can do is BEEP, little fella, and walk around stuffy and
> like the south end of a mule going north bray a bunch of nonsense

> you don't know about. You talk only bullstuff BLUFF, herr robust.

You must not know any more about mules, Phineas T. Bluster than you do of amateur radio. The braying end of a mule is the north end when the mule's direction is the same. Mule stuff comes from mules and bull stuff comes from bulls. I can't BEEP here, Leonard, 'cuz you wouldn't be able to comprehend. I'll stick with typing for your benefit.

was no mercy if you forgot your homework.....

>
>
On the first or second day of 1st grade, the nun teacher had to leave our
classroom for a few minutes. Of course some of us were talking and making
noise, as small kids will. When she got back, she freaked out. Made the
kids line up at her desk and punish each one in turn. Must have been 20
minutes
it took to do all 30 something kids.

Also on the first day, it was time for lunch, as the nun announced it. So
I get out my sandwitch and started eating in my desk. Nun freaks.
How would I know that the school had another room for eating lunch?
Have heard that teachers nowadays are taught to anticipate kids not
knowing such things when they start school....

A Canadian with a valid Canadian amateur radio license may use the
license in the U.S. under reciprocal agreement, no matter if he receives
it by passing the exam or receives it by virtue of his professional
standing.
The only means by which someone may obtain a U.S. amateur license is by
passing the exam.

> Your point is interesting, however - one need only be a resident of

You're on a slippery slope, Mike. If TALKING to your child did any
good, you'd only have to do it a couple of time, right? I can hear my
mother's voice now: "How many times to I have to tell you?"

> In fact, I was recently enlightened to the fact that (I hope this
> doesn't invoke Godwin's law!) Saddam Hussein, Joseph Stalin, and Adolf

So the secret seems to be, beat your children on an irregular basis and
they won't grow up to be tyrants and ogres. It'd be interesting to find
that Jeffrey Dahmer was never spanked and that his parents tried to
reason with him.

It also delivered a message that people in authority are likely to abuse
their positions
and cannot be trusted. As the teachers often punished kids that didn't
misbehave
as the ones that did. Throw in it being the Vietnam era and .....

Sometimes teachers try to "teach respect" with violence. Well, if "fear and
hatred" = "respect" then it worked.... But I don't think respect does
equal
that.

We also had male nuns, called "brothers". CFX was their callsign, stood
for -something-something-Xavier. One of them was an ex marine drill
seargent,

and thought nothing beating on a kid 20 minutes non-stop. Another was from the Navy, and also could beat on a kid even longer.

Not suprizing that some kids tried to burn the school down. No real damage, something like a wastepaper basket on fire. We always hoped it was the real thing whenever they did a fire drill (after the fire dept made them not pre-announce that there'd be a drill today).

If I ran CBS or ABC or NBC or WB or UPN for that matter, I'd pass
every live rock singer thru a tape delay. Or any other likely loose
cannon.

And I bet CBS has ordered a delay to pass future live performances thru.
That should make the FCC a little happier. So a director in the control
booth can dump something inappropriate before it goes over the air.

I would sugest that they keep a tape of "Heidi" running to interject
over any offending portion that needs bleeped out.

Ahh, but talking DOESN'T work! You can't always reason with a child.
You have to deprive them of something that they value for a little
while. Then you give it back to them until the next time they misbehave.
I'm not advocating talk, and I'm not advocating beatings, I'm advocating
something I've found that works.

Read:

http://www.crimelibrary.com/serial_killers/notorious/dahmer/naked1.html

for an interesting if horrible accounting of Jeffrey Dahmer.

Indeed, he was not raised in an abusive environment. But it is unfair
to attibute anything to a pathological serial killer's upbringing
compared to a normal person. But there is a difference between Dahmer
and the nasties I mentioned above. Many people call them all madmen, but
there is a huge difference between Dahmer and the others.

CHOMP!

We have another OF RRAPer recently MIA, Dick Carroll wï¿½ex. I called
him with the Bell thing a couple weeks ago to find out what's up, got
his answering machine, left my number but have not heard from him. I
think Dick predates me in ham radio.

For a great bio of a *real* OF go to QRZ.com and punch in W3EAN. I got
my first taste of ham radio during a '40s civil defense drill when I
was assigned to him as his Cub Scout message runner while he was
mobiling.

Take my word, my folks never attempted reason when we were younger. My
sister and I were issued edicts in no uncertain terms. If we argued or
talked back, we could expect some time in a corner or in our rooms or
were grounded.

> You have to deprive them of something that they value for a little

My dad called it "giving us a little more leash". He retracted some
leash when we demonstrated that we couldn't handle the extra freedom.

Leo:

I don't even have to bother to read it. I'm guessing it says that all of us
hyper-conservative, redneck UhmurriKans are so backwardly non-progressive
in our morality that we're shocked and outraged by the little act put on
during Super Bowl XXXVIII by Jackson and Timberlake. Yada, yada,
yada.

I'm no prude, but I know obscenity when I see it, and that was obscene --
the whole half-time show, not just the Jackson thing. If it were being
shown after 11 PM or on a cable channel, that would be a different
matter, but this was shown on a major network during Prime Time, and
during a high-profile sporting event with a maxxed-out audience, including
young children. If there was anything that was designed to bring our
culture "...one step closer to extinction," this was it. Fortunately, the
negative reaction, while not understood by our ever-so-liberal neighbors
to the North, had the effect of at least getting Janet Jackson booted from
the Grammys, and forced CBS to change the Grammys from a real-time
"live" broadcast to a delayed broadcast, so that any other such
shennanigans can be edited out. Unfortunately, all the dumbed-down
New-Age pop-culture idiots out there will probably buy Janet's new
CD in record numbers, and that was her intention from the beginning.

If there hadn't been a "wardrobe malfunction," we'd all be talking
about Kid Rock's use of the flag for a poncho. There's probably a
couple hundred thousand veterans that want to kick his butt. But
Janet trumped him and no one cares about his crime. Had Justin been a
couple of years younger, Janet could join her brother in pedophile

jail.

I think you're right, Dave - the text of the US reciprocal agreement
refers to the country of citizenship of the foreign amateur, not the

country of residence. Our reciprocal agreement simply requires a US license, and makes no mention of the citizenship of the amateur.

Wonder why it's called a reciprocal agreement when it isn't quite reciprocal? :)

Not really - it was more of an editorial on the rather odd perception
that any reference to sex is bad, yet violence is perfectly OK.

It's worth a read, Larry - it does present an interesting perspective!

>

Um, you really should read the article before you draw the wrong
conclusions here, Larry. Our society ain't that much different than
yours, we just have this fundamental belief here that graphic violence
is far more objectionable than sex....an odd concept, for sure.... :)

Liberal? Hey, I voted Conservative.... :)

Yup, I have no doubt that you are absolutely correct here - I'm
certain this was done to market Ms. Jackson's CDs all right, and it
didn't happen by accident either. Shock has become a valuable selling
tool in the entertainment business. And, also no arguement that it was
entirely inappropriate for the Super Bowl (I'd go as far as saying
that the whole #$%^ halftime show should be scrapped, so that footcall
fans like you and I can watch the game without unnecessary
interruption....).

That's an easy one: Canada's radio amateurs may operate in the United States without passing a U.S. license exam. U.S. radio amateurs may operate in Canada without passing a Canadian license exam.

During my second assignment to Helsinki (three years), the Finns wanted me to pass a Finnish exam and use an OH2--- callsign because it was their belief that reciprocal operation was intended only for short duration.
They kindly backed off when I pointed out that no such thing was outlined in their regs. I was OH2/K8MN for that entire period. ITU recommendations changed between my first tour in Finland and my second. For the first, I was K8MN/OH2. One eastern european amateur began giving me hell over the air in the 1980's for not using "OH2/K8MN" after those recommendations came out. I told him that I couldn't very well use a call other than the one issued on my Finnish license.

That part makes sense - it's the citizenship wording with respect to
the license holder on one side of the agreement which doesn't exist on
the other side that puzzles me.

Have the Canadian rules changed? The last time I read it you had to be both a US citizen and a US resident to qualify. I'm not an American (or a Canadian either) so I couldn't operate in Canada using my US call.

The rules I read were certainly not reciprocal, though. An American with a US call and residing in the US could operate in Canada for only 2 months within the terms of the nearest Canadian licence (No WARC bands or 40m for Generals!), whereas a Canadian with a Canadian call could operate indefinitely in the US, even living here permanently, under the terms of their Canadian licence (not to exceed Extra).

>too..... :)

"Psychopathia Sexualis" by Kraft-Ebbing is still my first choice.

One Extra in here has continually fantasized an improbable life off-
keyboard for years, details varying implausibly as he continues.
Another has oriongasms thinking that no one could possibly under-
stand his expensive radio wondertoy. Another one just writes and
writes and writes every day, every day, every day, on everything
anyone posts, endlessly. Another one has a maternal fixation on
all the "little children" and becomes horrified, hiding head in sand
when confronted with reality outside of league boundaries. Another
one dreams of going back to the Pacific and shooting bears. Still
another went off the deep end long ago in the amateur murine core.
All the American licensed hams hum fascination over a single bared
breast on television, expressing puritan outrage over moral indecency
affecting their fellow seven-year-old Extras.

Morse code does indeed get through when everything else does!

It's a Deep-End City in here. Most fascinating. They don't realize
they are doing what they do when they do it.

This is much better than a post-graduate course in psychology! :-)

>connections to amateur radio are simply that you've commented to the FCC
>about the service in which you do not participate and that you post
>here.

Oh, my, another tyrant ranting away.

The FCC is "not a part of amateur radio," merely the regulation of
every civil radio service in the United States.

The First Amendment gives me a number of rights. Exclusion from
discussing those with anyone or my government is NOT under your
control. Not at any time, herr tyrant.

There are mechanisms in the U.S. Constitution for removing the
rights of citizens. Those are called "amendments." Do you think
you could ever, with or without force, make such an amenedment?

Why do you keep trying to be a tyrant?

Is that due to some mental illness? If so, get help fast.

Now be a good boy and go our and play in the radio sandbox with
your other "fellow hams." I hear the seven-year-old extra is nice.

Sieg heil...gruss gott.

Tsk, tsk, tsk, hiding from truth, freedom, and independence.

Perverse mental activity. Ostrich syndrome.

Hide head in sand and all you can hear is the drumbeats of the league making you tap in time to only their loud music, the rhythm of olde-time hamme radio as it was. It shields you from realization that there are others out there who do not agree with you. It is safe, secure, warm, comforting, makes you feel very superior to shut out all other independent thought.

Tyrants love the ostrich syndrome. Plays right into their rule.

Incorrect. I have no pressing need to get one.

>>He appears to want to make changes without being a member
>>of the affected group.
>
>He wants amateur radio as we know it to disappear.

That's partly true. TAFKA Rv.Jim wants U.S. amateur radio to
remain in the standards and practices of the 1930s. He wants
to keep a Living Museum of Archaic Radio Skills.

He loves the idea of Seven Year Old Amateur Extras, his
"fellows" as he said in another post.

>What he wants is a multiband high power version of cb.

Highly incorrect. Shame!

Removal of the morse code test will not be The End Of The
Amateur World, simply the dismay of olde-tyme hammes who
can no longer use morsemanship for one-upmanship on fellow
ham children.

> Or nothing at all.

Highly incorrect again.

>He also appears to enjoy insulting and berating anyone who is
>not in complete agree with his opinions.

Highly incorrect again.

The hidebound, stubborn olde-tyme hammes who appear in here
get replies "that seem to write themselves."

Commercial broadcasters are required by LAW and the terms of
their license to STAY on their allocated frequencies.

Commercial carrier services on HF are usually allocated several
frequencies to use on HF. A QSY is NOT any technical hurdle
requiring years of experience to learn, to take tests for, or any
of that nonsense. Did that a half century ago. No problem.

Right! Amateurs are the most noble, god-fearing, honest folks in
the world, to a man upholders of social morals, the ten
commandments, and all give tithes more than ten percent!

Filthy evil money-grubbing professionals don't have families or bills
or loved ones or any expenses. They probalby drink, smoke, and
cuss, showing indecency at football games and everything!

You ought to work at league headquarters where they built all
their home-designed rigs just like you did.

>>If you get the opportunity, have a look
>>inside a cellular base station sometime - all of the equipment in
>>there is computer controlled
>
>Which means no licensed operators are needed at all.

Blasphemy! Say not those evil words!

All must be licensed, tested, analyzed for proper moral virtue, and
be subject to hellfire and brimstone if they so much as hint at any
unlicenseness!

>Elimination of operators has been a major goal of commercial and
>military radio services for years. One less warm body to pay. Just
>like the railroads eliminated most block operators years ago, and the
>telephone company went to dial equipment, and the airlines went to
>planes that can be flown by two, not three.

Haven't you realized it? It's all a vast conspiracy against morse code!

The only ones who use it are the amateurs (glory be their name,
hosannahs in the highest for those virtuous, noble, standard-bearing
leaders of the state of the art in all radio).

Oh, and the U.S. Army Signal Corps is the third most populous
branch in the Army despite no use of morse code for any military
communications. A larger percentage now than in WW2 when
morse code was still used by the military.

American railroads have more radios (none of them morse mode) now
than ever before, are required to channelize very close together in
order to fit within the allocations. NTIA has the facts and figures.
For wired communications they have high-speed data and some use
encrypted modes for security.

American airline companies have shown the rest of the world how to
run profit-making air carriers, both passenger and cargo. They have
NO need for morse modes over civil land air routes, have never had any
internationally since 1955 and abandoned HF morse CW for SSB and
data modes long ago out of practicality of USE, not for warm body
elimination in aircrew. Upon inspection of professional air carriers,
where the once carried an "extra" aircrew for morse comms, they
STILL carry "extra" aircrew in the same number for other flight duties.

As to practicality in use, which would you think a business would
want for written communications: A "high speed" pair of morse
men capable of 40 WPM or a data/teleprinter circuit useable by anyone
who can read and write running a over a hundred times faster?

If public safety is such a concern at sea, why did SOLAS and the
maritime community devise, adopt GMDSS instead of manual
morsemen "sparkies" doing code on 500 KHz? GMDSS can be
operated by any trained, certified ship's crew, not a specialist in
morse.

>> - nothing even resembling a piece of
>>radio gear to be seen.
>
>Only if you don't know what it looks like ;-)

None of it looks like a K2 or an Orion.

Cell sites operate at the 1 GHz band and higher. "Real hams" don't
go near microwaves. "Gigahertz for gigasquirts" - KH2D

>>The signal out, though, is Hertzian, and as old as the universe....
>
>If it's as old as the universe, it existed before Hertz.

It isn't "real radio" if above 30 MHz. - CW (Conventional Wisdom) of the
olde-tyme mighty macho morsemen.

<snip>

>>Sure, but according to IC, that isn't a concern!
>
>IC is just wrong.

Tsk, tsk, next thing you will be accusing Industry Canada of having
Weapons of Mass Destruction!

>>>> >And are professional licensees allowed to build their own transmitters
>>and put
>>>> >them
>>>> >on the air without any certification?

>>>> required, unlike the commercial frequencies).
>>>
>>>Then the "pros" aren't necessarily qualified in that area, either.
>>>>
>>>> In fact, there are precious few Amateurs left who could do that, Jim,
>>>> even though our bands permit it.
>>>
>>>I can, and have.
>>
>>I know - but they just ain't making them like you anymore!
>

>Yes, they are. There are plenty of hams like me around, building,
>operating, using Morse code....That sort of thing really bothers
>some people.

Only when they want to force their Lifestyle on everyone else.

They won't let things be. They must Convert the heathen NCTAs.

They get all hot and bothered when everyone else doesn't worship
and adore the things they do (obviously superior things according
to them).

>>>Canada may be different. But I don't live there.
>>
>>Same, actually. 100 questions, 60 correct gets you a basic license.
>
>60% passing? At least here it's ~74%.

Yah, here we go with the Territorial Imperative nonsense again...

>>>You seem to be arguing that such licenses aren't really needed
>>>anymore.
>>
>>No - I'm arguing that they are becoming meaningless - simple memory
>>work that a child can do.
>
>If they're meaningless they aren't needed.

Right...SEVEN YEAR OLD EXTRAS IN THE USA.

Wow, certified, stamped, authorized, qualified infantile behavior, legal
to run 1+ KW transmitters without parental supervision!

>Has the licensing of young children caused any problems for the ARS?
>Are they making a mess of the bands?

The mentally-seven-year-olds seem to be doing just fine. Every
so often they appear in the "Riley notices."

>btw, Canada used to have an age requirement of 15 for any class of
>amateur license. Would you have them put that requirement back?
>
>The USA never had an age requirement for a ham license, but at
>least one frequent poster here petitioned the FCC to add an age requirement
>of 14 years. Fortunately the FCC did not do so.

Right. FREEDOM for seven-year-old Extras!

You show them!

>>>> >>Too easy, I'd say,
>>>> >
>>>> >The FCC disagrees.
>>>>
>>>> Unfortunately.

>>>
>>>They're PROFESSIONALS, Leo! They have to "keep current or move out",

>They are - but you wrote as if there were no other possibility.

My, my, Leo writes an indefenite and TAFKA Rv. Jim says its
an absolute! Gotta love the double-degreed word misunderstanding.

>>>> Ever talk to a 7-year old kid, Jim?
>>>
>>>At least daily.
>>
>>Listen often too?
>>
>At least daily.

Keep those SEVEN-YEAR-OLD EXTRA CLASS skills honed sharp!

>>>Much of what's on the test (band edges, regs) is pure memory stuff.
>>
>>Thought the Extra was more theoretical than regulation based?
>
>None of them are heavy on theory. Not anymore.

Sigh...maybe "Now You're Talking" will be replaced by Mother Goose?

>>But you're not 7!
>
>I'm not 13 either.

Right. You are 49 going on 94.

Seven year old Extras now have ALL the rights your Extra license has.

There's no legal requirement for parental supervision when they run
1+ KW transmitters.

>>>And there is *no* requirement that *any* ham understand complex
>>>numbers.
>>
>>There is, if he really wants to figure out why his 50 ohm antenna has
>>an SWR of 2.6 to 1......
>
>Not at all.
>
>And why would a 50 ohm antenna have such a high SWR if it's 50 ohms?

Right. All Seven-year-old Extras KNOW that stuff!

>>>Wrong is wrong. But the IC are professionals, aren't they?
>>
>>Yep - professional regulators. Them who makes the rules!
>
>PROFESSIONALS IN RADIO!!!

Nooooo. Professionals in LAW. Absolutely NO Commissioner or
staff member of the FCC is required to possess ANY radio operator
license. Read Parts 0 and 1 of Title 47 C.F.R.

You ought to research Industry Canada's organization and charter
some more before tossing sand from your sandbox at them. If you
don't know our FCC then how can you "critique" Industry Canada?
You don't even live in Canada.

>>>> Personally I'd think, for example, that the guy who sits in a control

There's NO test required to access or post to newsgroups.

Why should I get an amateur radio license to operate a computer?

I've been operating computers since the 1970s...about two decades
after I first transmitted on HF with a 1 KW transmitter.

You've had too many oriongasms. Stop it or you will grow more
blind.

You mean WHINE about non-amateur subjects like sex and
contemporary social-sexual morality?

Was I doing that without an amateur radio license?!? :-)

Good heavens, call Riley, call Powell, excommunicate me from
the Catholic Church!

Yes, you're right...an amateur radio license is required in order to
talk about Super Bowl halftimes and "indecent exposure."

That's a very important amateur radio policy topic.

You should make Janet Jackson take a morse code test!

That would cure her of her "indecency!"

[there's never been a case of indecent exposure on the HF ham bands!]

I didn't see any mention of Janet Jackson's breast in the question pool.

It's not in Part 97, Title 47 C.F.R.

You ought to petition the FCC to put that in, mighty macho morseman of fortysomething in amateur radio.

At least write the VEC QPC and DEMAND (in your own unique way) that the U.S. amateur test include questions on anatomy, sex, and morals!

Do the right thing for the future!

All the kiddies are counting on you, especially your fellow seven-year-old Extras.

Lack of an answer must be due to endorphin overload or lack
of oxygen from the running. Maybe just lack of oxygen from his
rareified heights of code superiority.

Or maybe solder fumes from building a kit to add to his
collection of all home-built and designed ham rigs.

Precisely. You're not ANY kind of Extra or any kind of radio amateur.

> If you think that a SEVEN YEAR OLD has anything "up" on me,
> I'd say you have the mentality of a seven year old.

The facts are there: A seven-year-old has an Amateur Extra. You do
not.

> Now go out to the sandbox and play with your "fellow Extras" in

> spank you for being naughty.

Aren't you the guy whose wife is scolding him for playing with
seven-year-olds?

Dave K8MN

2308. Question for LEN OVER 21

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-08 19:40:55 UTC
From: Helmut <Helmut@Stroeml.com>
Message-ID: <c063bvkbo06$1@news.t-online.com>
Source record: 86984

Hi, Len,

after reading through your last 25 posts to 10 threads, and did not find anything useful, exept wrong spelled english and german, but nothing about Amateur Radio Policy, I have to ask you directly about one very important thing.

What impact will Broadband over Powerlines, or PLC, have on the Amateur Radio Policy.

Thank you in advance for your honest and honorable answer, which I will take from you as the only one expert in Amateur Radio Policy and the Moderator of this Newsgroup. Please take my apology for the poor quoting habits, I am not jet skilled enough in this magic art.

Please don't cite me impatient, but may I await your reply soon? Today?

Best regards
Helmut

Tyrant? For pointing out facts? Go over that paragraph again.
Anything there you'd like to dispute?

> The FCC is "not a part of amateur radio," merely the regulation of
> every civil radio service in the United States.

1. The FCC regulates amateur radio. FCC staffers are paid to do so.
So at least some individuals at the FCC are involved in amateur
radio.

2. I am a radio amateur. Thus I am involved in amateur radio.

3. You are not a radio amateur and you are not employed by the FCC.
You have nothing to do with amateur radio.

> The First Amendment gives me a number of rights. Exclusion from
> discussing those with anyone or my government is NOT under your
> control. Not at any time, herr tyrant.

When was it that you were excluded? You "discussed" (albeit one-way,
from you to the FCC) with your government. Now, force the FCC to listen
or act on your views. Maybe you can claim that your First Amendment
Rights were abridged.

> There are mechanisms in the U.S. Constitution for removing the
> rights of citizens. Those are called "amendments." Do you think
> you could ever, with or without force, make such an amenedment?

I have no desire to make an "amenedment", you "synchophant". Why are
you so "beligerent", "Atila"?

> Why do you keep trying to be a tyrant?

I'm not. I'm waiting for a group decision from you on whether or not
I've achieved radio god status.

> Is that due to some mental illness? If so, get help fast.

You keep accusing others of mental illness. Ask you wife what it means when you begin to believe that others are crazy.

> Now be a good boy and go our and play in the radio sandbox with
> your other "fellow hams." I hear the seven-year-old extra is nice.

We're pretty near the gist of things. There are ninety-five-old hams. There are twelve-year-old hams. There are folks in their thirties, forties, fifties, sixties and seventies who are hams. Those of us in the (amateur) radio sandbox play together pretty well. You aren't one of those hams and you don't play well with others. You can sit alone in your sandbox.

No, it's not like that at all, Larry. You should read it, because it's a perfect
example of a bunch of good facts connected by a bit of muddle-headed illogic.

>
>I'm no prude, but I know obscenity when I see it, and that was obscene --
>the whole half-time show, not just the Jackson thing.

I didn't watch past the part where the psuedo-cheerleader-dancers took off their outfits. I flicked back briefly and saw some no-talent wearing the American flag like a poncho, and tuned away.

>If it were being
>shown after 11 PM or on a cable channel, that would be a different

It's even simpler than that: It was aired with no warning of the content, so that those who would be offended could not make an informed choice. That's what's really offensive - and a point totally missed by the above article.

>If there was anything that was designed to bring our

>New-Age pop-culture idiots out there will probably buy Janet's new
>CD in record numbers, and that was her intention from the beginning.

The article fails to note the difference between movies (which are rated)
and live TV (which isn't).

Jackson and that other idot singing with her keep trying to convince
everyone it was accidental that her breast was exposed. She wore nipple
decoration because she meant for her breast to be exposed. What a lovely
upstanding example that Jackson family is....NOT!!!
And the other moron wearing the flag with a hole in it as a cape
screaming his junk they attempt to call music was just a bad.

>
> Then just leave 'em be!

That would require essentially maintaining the status quo, which
is unacceptable.

The FCC wants to simplify - the ARRL wants to create a viable
entry level class with meaningful HF privs and reasonable power
limits.

After careful consideration of Ed Hare's (personal, not ARRL)
comments on the subject on eHam.net, I (personally, not as NCI)
think it makes the best sense as a one-shot deal as a way forward

to a license/priv structure that makes sense for the future.

YM will, of course V ...

>indefinitely in the US, even living here permanently, under the terms of
>their Canadian licence (not to exceed Extra).

Not sure if they have changed, Alun - just discovered them when I
bacame a ham a couple of years ago! The link to the RAC page with
info on the current reciprocal agreement is:

http://www.rac.ca/regulatory/rcip.htm

and IC RIC-3, which contains the details on the various agreements, US
and other, is at:

http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/vwapj/ric3.pdf/$FILE/ric3.pdf

From what I read in these documents, one need only possess a US
licence to gain full Canadian privileges appropriate to the licence
class. For countries other than the US, CEPT and IARP permits are
acceptable.

Hope that helps!

73, Leo

>for -something-something-Xavier. One of them was an ex marine drill
>seargent,
>and thought nothing beating on a kid 20 minutes non-stop. Another was from
>the Navy, and also could beat on a kid even longer.

We didn't have those until high school. None of them were as sadistic as nuns.
>
>Not suprizing that some kids tried to burn the school down. No
>real damage, something like a wastepaper basket on fire. We

>always hoped it was the real thing whenever they did a fire drill
>(after the fire dept made them not pre-announce that there'd be a
>drill today).

We were told that if someone attacked the school or a "religious person" they'd burn in hell. And would probably have other consequences, like having their arm fall off when they tried to raise it to hit a nun. Nobody ever tried to find out if such things were true...

All that's changed now. Catholic schools are now more like private academies, and most of the teachers are lay people because nuns and brothers are too few.

>Take my word, my folks never attempted reason when we were younger.

Yup. In many cases it's counterproductive. For example, if you want a kid
to go to bed at 7 and he wants to go to bed at 8, and you spend half an hour
or even half a minute after 7 trying to reason with him, he's "won", because
his bedtime wasn't 7.

> My
>sister and I were issued edicts in no uncertain terms. If we argued or

Bingo. And for most kids, what they value most are freedom and attention.
Deprive them of either or both, and the message gets through.

Me too.

I would point out that *most* kids, beaten or not, will not grow up to be
serial killers. But the legacy of violence plays out in other ways.

And there's even a connection to amateur radio policy in all this:

Dave's dad's analogy of "leash" is very accurate. FCC gives its licensees a lot
of "leash" (freedom) in exchange for proper behavior. Violate that agreement,
and the "leash" is shortened. As in the cases of licenses not renewed for
"character" issues (meaning the licensee was convicted of serious crimes
that were not violations of the license itself). The kid who talked back or got
into a fight at school might find he wasn't allowed to watch TV, even though
the offense had nothing to do with TV. Same principle with FCC licenses.

Doesn't matter. The point is whether or not the audience knows what to expect.

Last night, the local PBS station showed "Catch-22". More than a little nudity,
sex and violence. But they showed it at 10 PM, with content warnings. Anybody
who might be offended knew *ahead of time* to avoid it. No such warning or
rating on the superbowl.

That's the point that the Toronto Star article completely misses.

>>>They put them on late at night when

>I had anotehr species of nuns in my school. "Sisters of Mercy" IIRC,
>but there was no mercy if you forgot your homework.....

Oyez, they had it down to an art. Grab a bit of a kid's hair and dribble his
head on the slate blackboard was one trick.

I remember one nun who busted an 18 inch wooden ruler beating a kid,
so he had to go to a specific store after school and buy another with his own
money, (they cost about a quarter) and then bring it back the next day so she
could finish beating him with it.
>
>On the first or second day of 1st grade, the nun teacher had to leave our

Only 30 kids in your first grade class? There were 70 (seventy) in mine.

IHM nuns preferred group punishment - keep the whole class after school or such
for the misdeeds of a few. The theory was that the innocent would beat the &^%
out of the offenders after school. Which happened sometimes.
>
>Also on the first day, it was time for lunch, as the nun announced it. So

>How would I know that the school had another room for eating lunch?

Oh man...

>Have heard that teachers nowadays are taught to anticipate kids not
>knowing such things when they start school....

Oh yes, but it's usually not needed, because nowadays most kids have
at least been to kndergarten, and most have been in preschool and day
care since diaper time. So they're more used to the whole concept of school.

But back in those days it was common for a kid to have never set foot in a
school or classroom until the first day of forst grade. I still remember other
kids being terrified. I wasn't - I'd gone to public school kindergarten.

Then I learned how different catholic school was...

>>
>> Then just leave 'em be!
>
>That would require essentially maintaining the status quo, which
>is unacceptable.

Why?
>
>The FCC wants to simplify -

Says who?

I recall that FCC **REJECTED** the ARRL proposal to free-upgrade Tech Pluses
and Novices to General back in 1998-99. And even though ARRL proposed keeping
the Advanced open, FCC rejected that too.

In fact it was *FCC's* idea to keep the Novice and Advanced as closed-off
license classes, rather than handing out free upgrades.

What has changed in the four years since then that now requires handing out
over 82,000 free passes to Extra, and over 322,000 free passes to General?

>the ARRL wants to create a viable
>entry level class with meaningful HF privs and reasonable power limits.

And that part is a good idea! In fact, it's almost identical to what I proposed
here more than 2 years ago. Except I'd require 5 wpm code...

But that doesn't explain the need for over 400,000 free upgrades.

Of course if the Novice is reopened with new HF privs, Tech Pluses should get
those same privs. And if the code test isn't required for "NewNovices", then
Techs should get those same HF privs.
>
>After careful consideration of Ed Hare's (personal, not ARRL)
>comments on the subject on eHam.net

I'll ask again for a link to those comments.

>I (personally, not as NCI)
>think it makes the best sense as a one-shot deal as a way forward
>to a license/priv structure that makes sense for the future.
>
Even though it means a one-shot reduction in written test requirements
for over 400,000 hams. That's almost 60% of those licensed today.

Here's another thought: Rules changes like that don't happen overnight -
there's always a time delay between when a rules change is announced and the
new rules take effect. So if FCC simply accepted ARRL's proposal tomorrow,
they'd probably make it effective a few months hence.

So someone without a license could just take the Tech before the changes take place, and then ride the free upgrade bus to General.

I'd really like to see a link to Ed's arguments...

Or maybe someone can repost them here...

> Add the fact that the pirate station is rather illegal, the web page would
> be the media of choice.

There's something magical about getting on the air for real though. I
can recall jumping at the chance to run a college radio station when I
was younger even though I wasn't a student there. Why did outsiders run
it? Because the students didn't care.

Some friends and I spent three years broadcasting from there. The
experiences could never be duplicated.

Here's a small sampling:

The night security let in the beasts. We kept the studios locked but
they could see us through the studio windows. Grrrr!

The night I managed to lock myself out of the studio as a record was
just ending. Took me a good 4 hours to find a security guy who had a
key.

Having to bring the tools and soldering irons to repair the ancient
Dukane mixing board we had to deal with. Oh, and smelling that telltale
odor that we just smoked something else in the board.

Reverb was created by tuning a portable radio to the same frequency and
placing it at the back of the room on low to medium volume.

Play it backwards? All you needed was a thread spool and a pencil sub.

Doing phase crossovers by messing with the inputs to the preamps.

Digging through the record vault and finding rare old gems, dusting em' off and playing em'.

It was too much fun. Hey, I was all of 21 at the time and it was a hell of alot better than rolling around on the streets.

Jim, my friend, if you had cared to read past the title you may have
noted the other far more important points that the article was
actually making.....

However, if you feel so passionately about this subject and believe
that the material presented was erroneous, please feel free to write
to the Editor at the following address:

lettertoed@thestar.ca

I'm certain that they would publish your perspective on this issue in
the "Letters to the Editor" column.

Or, you could just continue to complain here, in this little
group.......and continue to prove Benford's Law.

Your choice.

73, Leo

> assume from your statement that it didn't agree with your own
> viewpoint, as it too is "wrong".

I consider the points it makes accurate enough, but it makes glaring errors too.

The biggest one is the comparison between violence and sex. In it's own context, I agree, there is a weirdness about how some of us accept violence, but not sex.

But that ain't the argument.

If she were to become topless as an accident, I'd wager that the event would be a momentary thing to talk about around the water cooler. "That's the hazard of live TV" would be what people would say. "Poor Janet! She must have been mortified!", would be another.

But since the whole thing was planned, and they lied about it afterward, it changes the whole thing around. THAT has no place in a halftime show.

Fact is, the shows have deteriorated in content over the last several years, and a large portion of the audience doesn't like the emerging format. They (we) are complaining, and they (we) have a right to. It really isn't about sex versus violence. I no more want to see trashy, sexually oriented "entertainment" during the superbowl halftime than I want to see people being stabbed or hurt during it, or to have Peter Popoff come out and do faith healing and ask for donations.

And that is why I think the article is way off base.

> I take it you're not a Robbie Burns fan:

I never finished kindergarden myself. Got thrown out of it in 2 weeks.
Was likely
partly that my mom had told me to not do anything a stranger tells me
to. Teacher
was a stranger..... I didn't know what the hell was going on with this
strange
place I got dumped off at one day.

>
>
>
>
>
In later grades (2 to 4 or so) I got placed in the "poor reader" group.
Because
I'd always be losing my place in the reader when it was my turn to read the

next paragraph out of the reading book. Well, who can keep track of this while
several slow kids are slogging thru their paragraphs. I'd get bored and read the
rest of teh story and finish it. And then not know where everyone else is in it.
Teachers never figured this out.

They did have some good stuff. There was this thing called "SRA". Was a box
of about a hundred different short stories and articles. Color coded for level
of difficulty. You'd pull one of your current level and you'd read it and answer
the questions on the back of it by yourself. Pass 5 of these little tests and you
step up one level. Was an open book sort of test where you were allowed and encouraged
to look at the story again as you did the questions. There were about 20 levels.

Very true! There have been children that have been abused that turn out fine, and those with tranquil lives that turn out terrible. What the discipline or lack of it will do is bring out latent problems.

The really whacked ones will be that way regardless.

As a person that would never support a reduction in the written test requirements, how do you support your rationale?

Do you now support a reduction in the test requirements? Obviously the answer is yes.

Are these benificiaries of the so called "one shot deal" qualified to operate at the level to which they will be advanced?

Assuming your answer is yes, what is the reasoning behind those who come after the "one shot deal" to have to take a more difficult test?

Technically he's right Jim. He isn't supporting any reduction in the
writtens. He's supporting not having to take a test *at all*. There is a
difference, you know!

I think that when you scratch the surface of most people that support
reductions in the Morse code testing, you will find that they also
support reduction or elimination of the rest of the testing regimen.
There are exceptions, but they prove the rule IMO.

By golly, that's a lot more high level hams!

Only a few?

Fun fact:

When I got my Extra there were fewer than 10,000 others (other Extras, that
is). Now there are over 104,000 others. Doesn't bother me a bit. The more the
merrier - IF they pass the tests.

>So am I. They need to be tested though, and they need to take the test

Exactly.

As I said before - all who pass the required tests are welcome in *our*
sandbox.

That's the real problem - particularly for the Tech-to-General upgrade.

I will have a look at those documents, but it would appear to be a change.
I was told by Industry Canada that they would not enforce the citizenship
requirement anyway under the old rules, but I didn't feel very secure to
rely on that!

The first page talks about 'Americans operating in Canada', but I am not an
American, just someone with a US licence! That is the problem.

Reading further, RIC-2 limits operation under the bilateral agreement to US
citizens who are US residents, just as the previous rules did.

However, in RIC-3 it says that operating in Canada is possible under CEPT.

I cannot use my US licence under CEPT, as the CEPT letter that the FCC publish says that it is only valid for US citizens (I've no idea why, as the CEPT treaty does not mention citizenship anywhere).

However, if I got my UK licence re-activated it would automatically be valid in Canada under CEPT. Someone who wasn't British would still be able to do that, although I am actually a British citizen. I often go across the border to Windsor when I visit Detroit, but I have never operated on the Canadian side. It seems if I did so it would have to be as VE3/G8VUK, after first getting my UK licence back.

You all are on the wrong numbers, as you might recall, that the airwaves wont stop ath the borders of your country. There are already hundrets of thousands HAMS worldwide in "Your Sandbox". Dont you think that beeing a ham requires only some simple testing? It requires GLOBAL THINKING of open minded persons. All what I could read here on this matter is everything else than OPEN MINDED and not a bit of GLOBAL HAM THINKING.

What is "your sandbox"? Where can I make a test to access 40m above 7.100 ? Where can I do the test for usage of 146 - 148 MHz? This is your sandbox, I assume. But all the other Ham frequencies are also the sandbox and playground of all the hams in the world. Their numbers are a lot more than just 100k.

Thats the usual procedure in most countries of the globe to make a one shot
exam.
> >

Effective after Aug. 15, 2003, this kind of upgrade from non-HF to HF- Hams
has occured after the WRC03 throughout the world. This has been of greatest

benefit to ham radio after its developement. Now as there is young blood on the bands, it will keep the ITU from knibbling on the bands.

Which seems like a pretty cumbersome process - I wonder why the
citizenship rules were placed in the US/Canada agreement? One would
think that the licence would be sufficient to prove competence, and
residency to prove QTH...

Ah, but it IS his sandbox. It is also MY sandbox and, through a
lowering of the qualifications for obtaining an Extra class license, it
happens to be your sandbox.

So a "gimme" for tens of thousands is what makes sense to you, huh?
You've often written of morse tests as hoops and hazing, preventing
"otherwise qualified" people from entering amateur radio. You vowed that
you'd never support a watering down of written tests. Now you are
supporting a freebie for these thousands of "otherwise qualified"
individuals. "Otherwise qualified" must mean those people who can't
pass a required examination.

The "others" I wrote of above are other US Amateur Extra licensees.

> There are already hundrets of
> thousands HAMS worldwide in "Your Sandbox".

It's not my sandbox. It's our sandbox. And all who can pass the
required
tests are welcome! Not just "a few".

> Dont you think that beeing a ham
> requires only some simple testing?

Yes! The tests for a US license are very simple, yet some people want
them
to be even more simple. I don't think that's a good idea.

> It requires GLOBAL THINKING of open
> minded persons. All what I could read here on this matter is everything else
> than OPEN MINDED and not a bit of GLOBAL HAM THINKING.

Most of what is discussed here is amateur radio policy in the USA.
That's simply a result of it being US based and in English.

> > >So am I. They need to be tested though, and they need to take the test

> > sandbox.
>
> What is "your sandbox"?

I don't have one!

> Where can I make a test to access 40m above 7.100 ?

Move to ITU Region 2. Or convince your government to change the rules.

The reason hams in Regions 1 and 3 don't have 7.100-7.300 is that
their
governments wanted that spectrum for shortwave broacasting in 1938.
It's
not the fault of hams or governments in Region 2.

> Where can I do the test for usage of 146 - 148 MHz?

Move to ITU Region 2. Or convince your government to change the rules.

> This is your sandbox, I
> assume.

Not mine. Ours.

> But all the other Ham frequencies are also the sandbox and
> playground of all the hams in the world. Their numbers are a lot more than
> just 100k.

And they're all welcome. But how many of them are actually using, say,
7.000 to 7.025?
>

>
> Thats the usual procedure in most countries of the globe to make a one shot
> exam.

That's not the case in the USA. We have several classes of license,
with a very
easy and simple exam for the limited-privileges licenses and a more
advanced exam for the full-privileges license. By the standards of
most of the rest of
the world, the USA exams are very easy.

What is being discussed in this thread is a proposal that would give
more privileges to many with limited-privileges license *without* any
more tests.
I think that's a bad idea.
> > >
> > > Assuming your answer is yes, what is the reasoning behind those who

> has occured after the WRC03 throughout the world.

Are you talking about the code test? We're talking about the *written*
tests.

> This has been of greatest
> benefit to ham radio after its developement. Now as there is young blood on
> the bands, it will keep the ITU from knibbling on the bands.

How much difference has it really made?

How many countries have changed their rules?

How many new hams have gotten on the air since those changes?

How does the number of new hams since the changes compare to an equal
period of time before the changes?

Agreed. But it just ain't that big a deal. And to listen to people
like Spike Lee deriding the incident as possibly the worst thing that
has ever happened in the entertainment biz is absolutely imbecilic,
given the content of some of his own productions. But. these guys
know where the money comes from and how to stay on the right side of
public opinion.

Personally, I'd consider Kid Rock's treatment of the flag far more
disrespectful and tasteless - yet that got hardly any press at all. Or
the lyrics to some of the award-winning rap music - plenty of hate in
there....and racism, and violence, and immorality. But, they give
performers like Eminem big awards and big bucks to spread their
sinister messages of hate and apathy to our kids - and get big-time
upset over a televised breast, as if that would cause irreprable harm
to their young psyches and moral character. That's just stupid.

>
> Fact is, the shows have deteriorated in content over the last several

>want to see people being stabbed or hurt during it, or to have Peter
>Popoff come out and do faith healing and ask for donations.

I'd prefer that they drop the entire halftime big talent show
entirely. Remember when the SuperBowl was all about the game? We can
thank our media friends for trying to jazz it up to appeal to the
largest number of viewers possible, in an effort to boost advertizing
revenues.

Now, because of this incident, broadcasters are installing tape delay
equipment to ensure that inappropriate things are not aired. This is
not being done for the benefit of the public good, mind you - it is
being done so as to placate the advertizers, so that they don't end up
on the wrong side of public opinion and lose market share - and keep
those big bucks coming in.....

Even the FCC has ruled that profanity is OK on broadcast services. Is
this not more repugnant than a breast? Hmmmm. Nice value system.

Where was the outcry a few years ago when Bono let loose a string of
expletives on the Grammys? That was at least an order of magnitude
worse than a televised breast, and a lot harder to explain to the
kids....where were the 7-second tape delays and prophesies of the end
of his career? But hey, there were no nasty body parts involved, so
that was OK.....

>
> And that is why I think the article is way off base.

Not sure that I agree, Mike - the point was, the breast thing was just
not that big a deal. There are far worse things that society should
be concerned about - one need only look to the movies, video games or
even network TV to see that although sex has been somewhat removed
from our kids view, an incredible amount of graphic violence is pumped
out at them on a daily basis. That ain't good - and the impact on
society is well documented. All too frequently. With tragic results.

Had several nuns whose idea of "teaching" was to simply have a kid read from the textbook. At any moment, Sister Mary Elephant would call out another kid's name and if the kid didn't pick up on the very next word, he'd get a beating. We became quite good at following along and daydreaming at the same time.
>
>They did have some good stuff. There was this thing called "SRA". Was

>tests and you
>step up one level. Was an open book sort of test where you were allowed
>and encouraged
>to look at the story again as you did the questions. There were about
>20 levels.
>
I remember that! By 5th grade they'd run out of levels for me. I'd do 3 or 4 in the time it took most of the rest of the kids to do one. And since you could look back and check you answers, it was a cinch.

--

Another trick was that you never wanted your folks to find out when you got beaten at school, because they'd give you more of the same at home, and a lecture about how those blessed nuns had sacrificed their lives to teach you ungrateful kids, etc. Well, we never asked 'em to.

Those were the bad old days.

....That line still makes me laugh every time I read it!

I understand that Morse is good for getting through poor conditions
better than voice. Makes sense, it is narrowband and binary (well,
tri-state if you count the spaces...) encoded. From the experimenting
(read: fooling around) that I have been doing over the past couple of
months, I have been repeatedly amazed with the ability of BPSK-31 to
get clean copy through pretty bad conditions. Even DX signals that
appear as weak vestiges on the waterfall display can be easily decoded
with near 100% accuracy, using just a PC sound card as an interface.
Frequency stability of my old Heath TX is a problem, but I'm working
on it.....

Now there's something that will get through when nothing else will.
And, it types itself out, too. (that's a real boon for the perennially
lazy - like me) :)

I believe that BPSK-31 was created within the amateur community -
there must have been similar narrowband technologies used by the
military which predated it - any idea what they were?

HF-Bands are not only for EXTRA licensed hams from the US, and the
expression "SANDBOX" means the whole spectrum accessible for radio amateurs
all over the world. In the process of restructuring after WRC03 zillion of
hams will be able to enter this spectrum. Most of them did not pass the "US
GOLD CARD EXTRA" tests. They are given full HF privileges by the
authorities. This will also occur in the United States in the near future.
Do you realy think, your authority will step back from their voting at
WRC03? Do you think they want to loose their face towards those other
countries they were partnering at the WRC03?

They all are your fellow hams. Your friends, buddies, pals, or fellas. Why
don't you try to do the same, as the rest of the worlds hams are doing to

their hamfriends, stepping up now into the heaven of ham radio? Welcome them, elmer them, if you think they are not skilled enough, and give them the feeling of beeing welcome in your part of the spectrum. Exept in the US and a few other countries, you can tell the license class from the callsign. From all the others around the globe you cannot tell, if they've got their HF-privileges after the WRC without passing a test. What will your reaction be? "Go home, this is MY PARTof the spectrum"? There will be poor operational skills around for a while. Just recall YOUR first months of HF-operation. No master ever fell out of the blue sky, they all had to take their lesson and do her homework and practice.

Beeing a ham worldwide includes to be:
CONSIDERATE...never knowingly operates in such a way as to lessen the pleasure of others.
LOYAL...offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally.

PROGRESSIVE...with knowledge abreast of science, a well-built and efficient station and operation above reproach.

FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance, cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED...radio is an avocation, never interfering with duties owed to family, job, school or community.

PATRIOTIC...station and skill always ready for service to country and community.

--The original Amateur's Code was written by Paul M. Segal, W9EEA, in 1928. Nowadays there has to be added: global thinking

> Most of what is discussed here is amateur radio policy in the USA.

> That's simply a result of it being US based and in English.

And concerning this newsgroup as to be US-based and written in english language is not protecting you of beeing a ham. Act like, speak like and write like it is to the honor of amateur radio.

> > > >So am I. They need to be tested though, and they need to take the test
> > > >that other Extra's take.

I've heard the same song across the bands after they dropped the CW-test to 5wpm. Did it help anything? Your authority ignored it. Do you think they did change their habit to please 10 percent of the american hams?

You are right on this. It will get regulated after 2007 when the 40m
allocation will be 7000 - 7200 exclusive for all hams worldwide. This was
also concluded in Geneva.

Jim, it is not the difference in numbers, it is just the fact, that it
happend. Give yourself the cream upon the cake and think positive about the
new situation. Showing anger and agressiv language against those beeing a
"victim" of the restructuring process doesn't bring any good to the ham
family. Not in your country, and not around the world. And where we cannot
do anything against it, it's not worth to argue about it. It is NOT
negotiable.

Here in Europe, we even did'nt have the time to try negotiating. The
authorities of the various countries just signed the bill and thats it. Your
FCC should do the same. This would save you all here on this thread a lot of
nerves.

No there isn't.

Eliminating something is the same as reducing it to zero. The free upgrades
simply reduce the testing required for the upgrade to zero. Still a reduction.

I can see some possibilities:

- Free upgrading Techs would mean a lot more hams with HF, which is a big
arguing point against BPL

- Possible recruiting tool for ARRL ("look what we got you!")

- Less work for VECs (NCVEC is always complaining - see their comments.)

- (the big one): The ARRL proposal dumps Element 1 for all but Extra.
Supporting it gets Carl and NCI most of what they want in the codetest area.
And maybe the FCC will dump Element 1 for Extra too....

I'd really like to see the link. Looked around eham but can't find the comments
mentioned.

Required *WRITTEN* examination.

Note also that Carl has repeatedly said here that the current license structure
was just about right except for the code test and the need to beef up the Tech
written because it allows full power on "meat cooking frequencies" (great
catchphrase, btw). All of which made sense if you agree with the anticodetest
arguments. Now, for some reason, there's some sort of *need* to hand out lotsa
freebies. But no one will say why.

There may have been this side effect that, after school I split the
joint as fast as I
could. Never saw any molestation (don't know if my particular school
had any of that,
but I wasn't at any risk of that).

Then there were the yearly school plays. You had two choices: be in it,
or buy a
50 cent ticket to the play. It was a no brainer: I paid the 50 cents
rather than have
to memorize lines and acts and spending more time at the school.

That's how history class got done. And memorizing names and dates.
Good for playing
"Jeopardy" but otherwise meaningless. It seemed that kings in Europe

would get bored
sitting around their castles and decide to have wars for fun every so
often. Football not
having been developed yet....

>
>
>>They did have some good stuff. There was this thing called "SRA".

>
"What was Mr Honey Bunny's wife's name?" I had a bad memory, but being
able to
go back and look made it easy.

There were a few kids whose mother tongue was probably not English, and had
difficulty. I though that they were just brain damaged or something, as
I had no
concept that there were other languages than English until I was about
ten. Never
heard anything other than English in real life or on radio or TV...

>

Didn't have that problem. Actually, my parents might have sued if they
knew, but
I didn't know that at the time.

Some nuns may have been teenage girls afraid of sex....

I think the ARRL is doing a super job of taking care of its own cash cow. Ham Radio as we know it is changing in the interest of progress with no considration for the hobby. I bet if everyone who subscribes to QST was to cancel their subscriptions,in other words, BOY COTT the ARRL, their trend of thought would take a sudden change of direction. Who cares about manufactures who pay for glossy pages of advertisment in QST. After all didn't we all used to make our own radios once.
It seems as though the reciepe is to dismantle the hobby of amateur radio and ARRL is trying to hang on to what ever will keep them going as money making tax free organization.
Ask your self, what has the ARRL ever done for you personally or for anyone you know, I bet the answer is zero, nada.
I am glad that I have at least had the past 47 or so years of amateur radio.
That is how I feel and I just want to voice my personal opinion even though I am going to get bashed for it. Jim AF1Q

Not that we're surprised.

Leonard H. Anderson is a known pathological liar with a penchant
for overstated accomplishments in radio communication and blatant lies
about the character of his military service.

Just another day on RRAP for him.

Not to you. To other people it *is* a big deal. Not just the incident
itself,
but the incident as a symbol of how goofy the whole system is.

> And to listen to people
> like Spike Lee deriding the incident as possibly the worst thing that
> has ever happened in the entertainment biz is absolutely imbecilic,

Exactly! They're all playing the game to their best advantage.

> Personally, I'd consider Kid Rock's treatment of the flag far more
> disrespectful and tasteless - yet that got hardly any press at all.

Agreed. To my way of thinking it was downright obscene. And the
producers
must have known about it beforehand.

> Or
> the lyrics to some of the award-winning rap music - plenty of hate in
> there....and racism, and violence, and immorality. But, they give

> sinister messages of hate and apathy to our kids - and get big-time
> upset over a televised breast, as if that would cause irreprable harm
> to their young psyches and moral character. That's just stupid.

Who gives out those awards? Think about it - most of the showbiz
awards,
be they Grammys, Emmys, Oscars, GGs, Tonys or whatever, are given out
based on voting by industry insiders, not the general public or even a
subset (such as the viewing/moviegoing public). Kid Rock has never,
and now
will never, get a penny from me. Yet there's little I can do to stop
him
from getting awards for acting like a treasonous idiot.

Agreed! Maybe they should run all the commercials at halftime - most
of them were far better than what little I saw of the show!

> Remember when the SuperBowl was all about the game?

When was that? This year's game was the best I've seen in a long long
time.
The game itself, that is.

> We can
> thank our media friends for trying to jazz it up to appeal to the

That's why it's called show *business*. And make no mistake -
professional athletics is nothing more than a form of show business.

> Now, because of this incident, broadcasters are installing tape delay
> equipment to ensure that inappropriate things are not aired.

Aw 'cmon, they have it already.

> This is
> not being done for the benefit of the public good, mind you - it is

When did they do that?

> Is this not more repugnant than a breast?

Depends on whose.

> Hmmmm. Nice value system.
>
> Where was the outcry a few years ago when Bono let loose a string of
> expletives on the Grammys?

That was a few months ago. And there *was* an outcry - to the extent
that
The Congress is considering a bill to ban certain words on broadcast
TV and
radio. The list is almost identical to George Carlin's list. Of course
the
words are actually part of the bill....

> That was at least an order of magnitude
> worse than a televised breast, and a lot harder to explain to the
> kids....where were the 7-second tape delays and prophesies of the end

> from our kids view, an incredible amount of graphic violence is pumped
> out at them on a daily basis. That ain't good - and the impact on
> society is well documented. All too frequently. With tragic results.

And the broadcasters have the same excuse they've used for years:
People *want* that stuff, because they vote with their channel

changers. It's all about
ratings, and if a show gets ratings, there's more of the same. Lots
more.

Last night ABC aired "Pearl Harbor", which I found to be a much better
film
than the reviews would lead one to expect. It was quite violent, but
the
violence served a purpose and in telling the story. And the violence
had real consequences to real people. Definitely not something you'd
want young kids to see. That's a different thing than the 'cartoon'
violence of many shows. (Any really good war film [Das Boot, Saving
Private Ryan] also turns out to be an
effective anti-war film, simply by being accurate). The danger isn't
the violence, it's not taking the violence seriously.

> >> I take it you're not a Robbie Burns fan:

For many years now the sane and the reasonable in this forum have dodged Lennie the Liar's labelling of the Code Tested among us as "morsemen", "mighty morsemen", etc etc. If for no other reason than because HE uses it to try an belittle us.

But I have to ask myself...WHY...?!?! =)

I have a skill that precious few have (certainly one LENNIE doesn't have!). It took a certain amount of work, determination and concentration to "get it right", and everytime I use it, it's just a bit different than the last time, but thrilling and fulfilling nonetheless....Almost like an artist putting brush to canvas.

When the guys on 14.195 are still yelling "YOU'RE FIVE NINE IN DETROIT BUT I MISSED YOUR CALLSIGN AND HANDLE...", I have a "rare one" in the log and am moving on to the next challenge.

When the gang on the SSB traffic net is fighting QRN from hell, I have QSL'ed the traffic and am on my second cup of coffee.

Where the guys on phone pass up a "CQ" in a foreign tounge or heavy accent, I answer and make a friend.

I've helped relay messages home for my Brother Marines and other services that meant keeping that "personal touch alive. Yes, cellphones and Internet have driven that need to almost zero, but the "basic traffic handlers" have still proven thier worth in the 21st century.

I've made friends in other countries that I wouldn't have otherwise made due to LACK of technology in those parts of the world, and on at least a couple of occassions my travels led me to their doorstep.

Who could ask for any better justification for embracing Morse skills than making a friend?

Well, I know that's an rhetorical question and the pundits and antagonists (especially our resident pathological liar, social barfly and NON-licensee, Lennie H. Anderson) will now "have at it" and tell me how it violates some right of theirs...Oh well...

I have something Lennie can't ever have...WON'T ever have, and will never understand...self-inflicted ignorance is his own undoing.

So sign me...proudly at that...

The soundcard is only part of the system. The decoder is quite smart,
in that
it stores and examines the received data and does a "best fit"
decoder. You can read all about it at several websites.

But it's important to realize what constitutes "poor conditions".
Against purely amplitude noise it's quite robust. But against phase
noise of various
types it is not robust at all. All depends on the situation.

> Frequency stability of my old Heath TX is a problem, but I'm working
> on it.....

What rig is it?
>
> Now there's something that will get through when nothing else will.

Not really. You will find times when the PSK-31 signal is clearly
audible in the speaker, well above the background amplitude noise, but
the decoder cannot make sense of it because the phase distortion is
too bad.

> And, it types itself out, too. (that's a real boon for the perennially
> lazy - like me) :)

It was meant as a replacement for conventional RTTY - as a "keyboard
to keyboard" mode. For example, the speed was chosen to be about what
average conversational keyboarding hams use.

btw, the code used in PSK-31 uses shorter symbols for the most common characters and longer ones for the least common. Just like Morse code, which is where the designers got the idea.
>
> I believe that BPSK-31 was created within the amateur community -

Yup - G3PLX, and a number of folks who helped him by testing it out on the air and others who have developed software packages. A local ham of my acquaintance (one of those longtime 20 wpm 1x2 Extras with multiple EE degrees - we share two alma maters, btw) was one of the team who helped test it out.

PSK-31 is another great tool in the toolbox, but not a replacement for good old Morse Code.

Steve,

Since Mr. Anderson has made his purpose here quite clear, why do you continue to bother with him? All that does is reinforce his behavior. You've raised kids - you obviously know that rewarding behavior is a good way to get more of it. And often the "reward" is simply giving your attention.

Good point - I've compared it to RTTY from the decoding standpoint -
RTTY seems to be much more prone to losing characters or dropping out
entirely when the signal is weak or noise is high.

>
>But it's important to realize what constitutes "poor conditions".

>
>What rig is it?

Heath SB-400. The Pride of 1964 :)

With a narrowband signal like this, it doesn't take much drift! I'm seeing a frequency decrease of up to 15 Hz, beginning a few seconds after keying. B+ to the VFO appears to be well regulated - maybe not tight enough though. Might have to replace the 0A2 with a few zeners - haven't tried that yet....

>>
>> Now there's something that will get through when nothing else will.

Fully agreed, Jim. Similarly, others who disagree with your opinions
(governments, newspapers, or individuals) aren't necessarily 'wrong'
or 'muddle-headed', are they?

You seem to believe that they are.....or so you say, anyway!

Unless you have facts available to prove the errors as you perceive
them, it's just your opinion on the subject that you are putting
forth, not absolute truths. Hence the reference to Benford's Law in
one of my other posts along the same lines as this one....

couple of summers back and I enjoyed the experience.

> Heck, he might win me over!

I enjoyed our chat, but I'm not banking on his ability to win me over on
this one.

You're squirming pretty hard and stretching pretty far with your attempt
to twist my use of the words "a few others" into something you know
damned well I didn't mean the way you're trying to spin it ...

> And I do recall someone saying they'd **NEVER** support a reduction
> in the **WRITTEN** test requirements.

I'm not ... I'm supporting the establishment of a reasonable, viable
entry level class with appropriate testing and restrictions.

>Yet now I see that same person
> supporting free upgrades that involve not even having to take *written*
> tests...

As Ed pointed out, the difference between the Tech and General written
tests is not that large - it's a one-shot deal to "make things right" in a
way
where nobody loses privs, and as Bill pointed out, those Techs are already
authorized 1500W at frequencies that the FCC and anyone with any knowledge
of RF safety knows are more "risky" than HF.
>
> >> >Like all those Advanced are on the air now. Give me a break.

> >sent in their license for cancellation - so what?
>
> Why not upgrade all existing hams except Novices to Extra, then?

Because that doesn't comport with either the FCC's or the ARRL's
(or my) desire to have some reason for folks to learn more to upgrade.

[snip]

> >After careful consideration of Ed Hare's (personal, not ARRL)
> >comments on the subject on eHam.net
>
> I'll ask again for a link to those comments.

Go to eham.net (or use Google) ... I don't have the URL direct
to Ed's comments handy ...

>
> >I (personally, not as NCI)

> >
> Even though it means a one-shot reduction in written test requirements
> for over 400,000 hams. That's almost 60% of those licensed today.

Again, the differences are not that great (in content - I know you have
a BIG hangup about the number of questions on the test ...)

> Here's another thought: Rules changes like that don't happen overnight -
> there's always a time delay between when a rules change is announced and
the
> new rules take effect. So if FCC simply accepted ARRL's proposal tomorrow,
> they'd probably make it effective a few months hence.

They could make a rules change effective 30 days from publication in the
Federal Register ...

> So someone without a license could just take the Tech before the changes
take
> place, and then ride the free upgrade bus to General.

Give me a break ... your arguments are just plain lame and your "someone might
get privs without taking a test with the same number of questions as I took" is
REALLY showing.

> I'd really like to see a link to Ed's arguments...

Go find them - you know how to google.

36-1/2 :-)

That was Carl's litany some years back and why I trotted it out for use
in this instance.

> > You vowed that
> > you'd never support a watering down of written tests. Now you are

...and this one was pointed out to Carl and others here by me some years
back.

The idea of a "gimme" for tens of thousands makes no more sense than
Carl's reversal on his vowed support for tougher written exams.

As I tell my students EVERY mode has its advantages and disadvantages. Each has its place in the scheme of things. If they have not tried out the modes within their financial reach, they have shortchanged their "toolbox."

Just to add to information, I heard a couple of hams talking shortly after the major solar flares of this past fall were finally over. They had commented on the fact that the distortion on PSK31 was so bad that they had had to switch to Morse.

As far as the American federal government is concerned, it does not
discriminate against the religious beliefs of any radio amateur.

Unless your parochial school taught amateur radio theory or
standards and practices, such is hardly a fitting subject of a
newsgroup concerning amateur radio policy.

Is it now a requirement that ALL U.S. radio amateurs practice
Catholicsm in addition to love, adoration, and respect for morse
code? Especially in early schooling?

>Agreed!

You two ought to write, wire, data transmit to the VEC QPC all of
your charges of immorality and tell the QPC to make them part
and parcel of every written test element!

This is a vital and important part of amateur radio policy!!!

Glad you brought it up.

I will be looking forward to seeing what the QPC comes up with in
that important amateur radio knowledge-morality area on multiple-
choice answers on the U.S. written tests.

Morality must be STRICT and punishment as severe in U.S. amateur
radio!

"No kids, lids, space cadets, or nudity while beeping CW."

Helmut, what you say is true but the verbose regulars in this newsgroup
are adamant "America-firsters," that is, what the Americans do is "best"
and therefore that is good for the rest of the world.

The IARU came out with the opinion years ago that morse code testing
should be eliminated from an ITU requirement. The ARRL, a supposed
leader of American amateur radio (with membership less than 25% of
all American amateur licensees) was against it. They aren't really for
eliminating any of it and remain in a middle position, neither for nor
against it. ARRL tries to please too many, therefore there is no real
consensus possible. It reduces to a simple phrasing for American
radio amateurs: All must do as was done in the old days by the old-
timers...because the old-timers imagine they are "the best."

It is a sad situation for the entire world in my estimation, a stubborn
opinion that belongs better in times of two centuries ago. As an
American who loves his country and has done so longer than most
other Americans in here, I am ashamed of their "radio-backwoodsman"
attitudes. Such reflects poorly on us, yet so many remain stubbornly
resolute in an America-first belief, a parochial attitude centering
around themselves with little regard to this nation or the world.

Fortunately for the rest of the radio world (much larger than amateurism)
the USA's negotiations on that rest of the radio world activity is better
and more liberal, willing to listen to other points of view. In here there
is NO other view allowed if it displeases the old-time regulars.

>military which predated it - any idea what they were?

PSK31 was designed/innovated by Peter Martinez, G3PLX, in the
UK, then air-tested by several over much of Yurp. Years ago.

There's a whole heaping lot of techniques/systems used by the
militaries (of the world, actually) on sending data/teleprinter over
both wire and radio circuits. Too many to recount in here. Few of
the militaries or the governments or the commercial carriers bother
with narrowband-specific communication circuits since they have
needs to send much data quickly. The advance in Information
Theory and Coding (generic other than morse code or character
codes) have applied themselves to other things besides comm
applications: Single-error correction, double-error detection for
computer memory applications to real-time analysis of seismic
effects on building structures. Real-time Fourier Analysis has
been at the heart of that and includes mundane things like the
little audio bargraph displays on home music systems (usually
combined with "equalizer" settings of same).

The "MIT Redbook" by Peterson and Weldon is a thick text chock full of all sorts of data coding schemes, error correction of same, plus ways other than Forward Error Correction to send data best without extra bits (something alluded to in Shannon's seminal 1948 paper that became familiarly known as "Shannon's Law").

The VLF Alert messages in the USN submarine fleet is not a subject of discussion. Those are digital, encrypted, and have some other features to work through all kinds of RF interference. The militaries/governments/commercial carriers generally confine themselves to rather standard medium- to high-throughput systems for radio circuits without going into complicated schemes. The various "TOR" modes are very close to those. Add to that the ALE or Automatic Link Establishment interrogation-response on auto-measurement of signal quality and that is the broad picture of what goes on by non-amateur communications HF to VHF. Note: Some of the details of everyday encryption are in the grey area of talk and I won't go into that due to prohibitions of U.S. law. If any such appear on the Internet, it has been cleared for public viewing, not classified.

A wide example of medium- to high-rate data communications allied to the basics of PSK31 is the common data modem used with personal computers. It can, with a good POTS line (Plain Old Telephone System), send 56K data rate material over a 3 KHz bandwidth. There are, literally, millions of those modems in existance; 152 million personal computers were sold worldwide in 2003 alone according to a story in LA Times Business section for 9 Feb 04.

The standard data modem with PCs uses a combination of amplitude and phase modulation of a carrier tone plus some rudimentary digital state re-arrangments to get a rate increase far above conventional single-mode modulations yet it does not violate Shannon's Law. Many who can only grasp the single-mode concepts keep trying to say "it isn't possible!" yet the possible is happening 24/7 worldwide by the millions. The generality of such dramatic rate versus bandwidth can be applied anywhere. PSK31 was one of those, cleverly arranged by Martinez to fit into a bandwidth equal to a morse code spectral space and perform just a bit better at an average throughouput of about 30 WPM. The PSK31 system is a complex one yet quite easy to implement with the aid of a (now) common personal computer. The PC isn't absolutely necessary since a dedicated terminal or radio modem can be built in a smaller package...but still needs a keyboard, display-printer to complete the data terminal.

What is astounding, in a world of technological plenty, that there are so many radio-backwoodsmen demanding that all revert to village blacksmith or horse & buggy driver or other primitiveness in a hobby activity to fulfill some mythical "requirement of knowing 'basics'" in order to be "as good as them!" Their "knowledge" of data comms is relegated to the memorizing-of-manufacturer's-advertisements-descriptions for "technical familiarity"...if a description says that a system operates at a low data rate, they cannot envision the possible

scaling to a high data rate...and vice-versa, very high data rate scaled down to slower speed and narrower bandwidth.

The first commercial telegraph circuit opened in 1844. Queen Victoria's coronation was about 1847 and she reigned into the 1900s beginning while radio was first demonstrated as a communications means in 1896. Among the PCTAs there is a terrible radio "victorianism" both in technology and morality...the chronology and subsequent utterances of those PCTAs is too coincident to overlook!

In this arena of PCTA radio-backwoodsmen (who can manually fell giant redwoods in their fantasies), there can be NO talk of what any radio service is doing other than what is blessed and codified by the league. [see numerous utterances of the resident gunnery nurse]

"Shannon?" Who's he? He didn't have a DXCC, hasn't worked a DX contest, isn't a dues-paying league member. Claude Elwood is "SK" bless his joyful soul, but he did establish the relationships, the framework on getting the highest data (of any kind, not just teleprinter) through any given bandwidth on any communication circuit. No village smithy anvils needed to bang out wireline morse on a solid-state radio and pretend to be "advancing the state of the radio art." :-)

In article <anaf20trnvpl1l286iu7tcnke41qnlp9j9@4ax.com>, Leo <nomail@noway.com>
writes:

>Now, because of this incident, broadcasters are installing tape delay
>equipment to ensure that inappropriate things are not aired. This is
>not being done for the benefit of the public good, mind you - it is
>being done so as to placate the advertizers, so that they don't end up
>on the wrong side of public opinion and lose market share - and keep
>those big bucks coming in.....

Broadcasters have used various kinds of "tape delay" since 1956
and before.

The most common has been the magnetic tape delay of a few
seconds for the audio. One example was the first Apollo mission
around the moon (but not landing) during Christmas holiday; VOA
did not use any delay but the network broadcasters had about a
3 second (approximately) delay of the same feed from NASA.
[no, it wasn't in case an astronaut bared a breast on audio...:-)]

Television broadcasters are considering longer combined audio-
video delay for minutes, not just seconds, to avoid the "shock
video" that upsets so many. This will usually mean another
person on constant monitoring in real-time on live shows to do
real-time "evaluation" of morality, etc., in order to cut out the
"offensive" material. [especially so for seven-year-old extras and
outraged bus driver veterans of the desk wars]

Considering that ALL network corporate income comes from
advertising time sales in U.S. broadcasting (PBS calls it
"sponsorship" in lovely spin while trying to be high-faluting and
lofty, even when carrying artsy, refined humor from Python shows),
the networks are VERY cognizant of advertising/marketing opinion.
"Public opinion" is, and always has been, secondary except for
who watches the shows paid for by advertising sales.

Now, in truth, NONE of the above nor anything in this thread has
not the remotest relationship to amaeur radio policy. :-) The
entire thread has none. Of no matter, it is considered vital and
important that all must be licensed amateur radio service men in
order to discuss female-specific anatomy and morals required for
their seven-year-old peer group. Sigh.

[expletive deleted]

> well I didn't mean the way you're trying to spin it ...

I'm not squirming or stretching, Carl. Just pointing out some facts. And I
don't
know what you intended to mean - I just know what you actually wrote. Frankly,

I was very surprised that you support free upgrades without *written* testing
for over 400,000 US hams

>> And I do recall someone saying they'd **NEVER** support a reduction
>> in the **WRITTEN** test requirements.
>
>I'm not ...

Let's get this clear right now.

ARRL proposes that all current Techs and Tech Pluses get a free upgrade to
General with no additional testing.

They also propose that all current Advanceds get a free upgrade to Extra
with no additional testing.

Do you support those free upgrades or not?

If you support them, then by definition you are supoorting a reduction in
the written test requirements for those licenses.

Now you might argue that it's only a temporary or one-time reduction, but it's
still a reduction. And since it affects over 400,000 hams, it's not a small
matter.

>I'm supporting the establishment of a reasonable, viable
>entry level class with appropriate testing and restrictions.

That's a completely different issue. And I support the "NewNovice" concept as
well. In fact I proposed it here more than two years ago.
>
>>Yet now I see that same person
>> supporting free upgrades that involve not even having to take *written*
>> tests...
>
>As Ed pointed out, the difference between the Tech and General written
>tests is not that large - it's a one-shot deal to "make things right" in a
>way
>where nobody loses privs, and as Bill pointed out, those Techs are already
>authorized 1500W at frequencies that the FCC and anyone with any knowledge
>of RF safety knows are more "risky" than HF.

Then why should *anyone* have to take the General test? If the Tech written is
adequate for General HF privs for some, why not for all? Why not simply dump
the General question pools into the Extra, and use the current Tech pool for
General?
>>
>> >> >Like all those Advanced are on the air now. Give me a break.

>
Sure - but they don't. Look at the 2000 restructuring - announced in late
December 1999, made effective April 15, 2000. More than 3-1/2 months
- over 100 days - of prep time.

>> So someone without a license could just take the Tech before the changes
>> take
>> place, and then ride the free upgrade bus to General.
>
>Give me a break ...

What do you mean? That's exactly what a lot of people will do.

Those with no license or an existing Novice will have an incentive
to get a Tech before the rules change and ride the free upgrade
bus to General. Those with Tech will have a *disincentive* to
actually take (or study for) the General. Same for Advanceds
and the Extra.

>your arguments are just plain lame

How? Do you think people won't do this?

>and your "someone might
>get privs without taking a test with the same number of questions as I took"
>is REALLY showing.

Nobody today can even take the tests I took. You couldn't pass the tests I
took,
Carl.

The tests I took are not the issue. Free upgrades and reduction in written test
requirements are the issue.
>
>> I'd really like to see a link to Ed's arguments...

Why would anyone have to, Lennie? In CW, all I am concerned with
is how well that person manipulates a Bug, key, paddle, etc. Of
course there are those who use keyboards, but not everyone can be A
Mighty Morseman.

ESPECIALLY you.

And unless the FCC closes the pools, it's of little use.

Also, too many of those "questions" and thier distractors are
just re-wordings of the same question...Still makes it easier to
"eliminate" the wrong answers rather than KNOW the correct one.

> I've been repeating the above for quite a while...but it seems that

There is nothing wrong to be patriotic. But beeing patriotic does not mean, whats good for my countrie must be good for any other one. Amateur Radio is a global "institution". The rules for AR are set by an international entity.
>
> The IARU came out with the opinion years ago that morse code testing

Are this oldtime-hams still use spark gap TX? Thats what they should do when argueing this way. The Americans never would have reached the moon, thinking

this "old days" way.

What makes me frightened is, theat there is no will to change ones way of thinking into a global range. The kind of "this is my fence, I dont care whats outside" mentality is not a hams mentality. It reminds me of the mentality of the ancient "southstates and yankee" disputes in the OLD US. It must be the genes, keeping fellow hams from going the right, the ham way.

> of RF safety knows are more "risky" than HF.

More spin.

Mistake number one is that this doesn't "make things right".

Mistake number two is assuming that this will be a one shot deal.

What is the rationale for the return to more stringent requirements
after the mass upgrade? That will be looked at as a clear disincentive
to adding new hams after the "upgrade" process.

How are you going to counter the argument that the requirements are
suddenly increased after "making things right"?

If a person that that takes the Technician test today is qualified to
be on HF, then they are equally as qualified the day after things are
"made right".

The only way that this can even remotely be "fair" would be to make the
post restructuring test requirements for the entry level license much
easier.

But you'll never support that will you?

>but the incident as a symbol of how goofy the whole system is.

Goofy is right.

Just found this article on Fox News this morning, regarding a class
action suit that has been filed in Tennessee over the Janet Jackson
'exposure':

http://www.foxnews.com/story/0,2933,110630,00.html

The lawsuit claims that:

"As a direct and proximate result of the broadcast of the acts,
[Carlin] and millions of others saw the acts and were caused to suffer
outrage, anger, embarrassment and serious injury."

Serious injury? Millions injured? From a TV picture of a breast? (that
ain't no ordinary breast, it's a WMD...) One can only speculate on
the nature of that one - the suit doesn't specify what kind of injury
was caused.

Hmmm - still think the Star article missed the target?

Nope, no irrational reaction there, eh? <8^0

Do you think all of the work done at ARRL Hq could be done by unpaid
volunteers?

> Ham Radio as we know it is changing in the interest of progress
> with no considration for the hobby.

I have no idea what that is supposed to mean.

> I bet if everyone who subscribes
> to QST was to cancel their subscriptions,in other words, BOY COTT the
> ARRL, their trend of thought would take a sudden change of direction.

Of course it would. But why should the members do that? What issue
would make
all of the members decide to drop out?

> Who cares about manufactures who pay for glossy pages of advertisment
> in QST.

I care about one or two of them.

> After all didn't we all used to make our own radios once.

Some of us still do.

Is all of your ham gear home made?

> It seems as though the reciepe is to dismantle the hobby of amateur
> radio and ARRL is trying to hang on to what ever will keep them going
> as money making tax free organization.

What, exactly, is ARRL doing that you disagree with? Please be
specific.

> Ask your self, what has the ARRL ever done for you personally or for
> anyone you know, I bet the answer is zero, nada.

You lose!

Here are some things ARRL has done for me:

- Excellent publications that helped me learn radio theory and
practice
- W1AW code practice helped me improve code skills

- ARRL-sponsored contests, awards and nets are a lot of fun and build
skills as well.
- PRB-1
- Fight against BPL
- Best ham magazine ever printed (QST)
- Representation in Washington and internationally, as well as
information.

> I am glad that I have at least had the past 47 or so years of amateur
> radio.

Without the ARRL, do you think we'd still have amateur radio? I don't.

I've been a ham for 36+ years, too.

> That is how I feel and I just want to voice my personal opinion even
> though I am going to get bashed for it.

No bashing, just some questions. You may *feel* the ARRL does nothing
for you, but the reality is quite different.

Part of that is the modulation method used and part is the encoding.
There's a good explanation of the varicode philosophy and the PSK31
modulation method on a number of websites.

btw, PSK31 in BPSK mode works at around 45-50 wpm. The speed depends
on the exact text sent because the length of each character varies,
but the average character is 6 to 7 bits long.

Amazing how well a 40 year old box full of glowbottles is still
useful, huh?
15 Hz stability from a one-tube Hartley is pretty decent.
>
> With a narrowband signal like this, it doesn't take much drift! I'm

> - haven't tried that yet....

First try replacing the 0A2 regulator and 6AU6A oscillator tubes -
different
ones may have slightly different characteristics.

But the real problem may be that the heater voltage is changing when
transmitting, rather than the B+. Another possibility is that heat
from the
6146s and power supply may be causing a bit of drift, because PSK31 is
a very
high duty cycle mode and a lot of heat gets dissipated on transmit.

One cure to consider is to build an external VFO, either LC or
synthetic, to do the job. The SB-400 LMO tunes 5.0 to 5.5 MHz, and it
tunes "backwards" (5.5 MHz on the VFO is the low end of the band
selected). Such a VFO could be mounted
externally to eliminate any changes to the rig itself.

I copied the heterodyne scheme of the Heath SB-series for the
Southgate Type 6 transceivers, btw. Found some Heath filters at the
1978 Rochester hamfest and
built a rig around them. Now it's on "standby" duty since the Type 7
entered service about 10 years ago.

Yup. Even the use of 00 for a character space was derived from Morse.

>
> Haven't formulated an opinion on that one yet - stay tuned!
>
Consider that it takes a lot more hardware to implement PSK31, and
that
the requirements of that hardware are much more stringent than what is
required to implement Morse code.

Consider also that Morse code, as used by hams, is an aural mode, but
doesn't
require talking. Thus it can be used in a number of situations where
other
modes can't. For example, it's not safe to drive and work PSK-31, but
mobile
Morse operation is safely enjoyed by many hams. Using voice is often
out of
the question when it is of prime importance not to disturb other
family members.

And when cost, size, weight and battery power considerations are
paramount, Morse code equipment is the natural choice. Check out the
new KX1 at

http://www.elecraft.com

for an example of what can be done with modern Morse code radio
equipment.

>
> Speaking of spin!

By whom? ;-)

As I see it, the ARRL proposal has five distinct parts:

1) A revised entry level license (I call it the "NewNovice" to
differentiate it from existing license classes). This new class would
have different requirements *and* different privileges than the
current entry-level license (Technician). It would essentially be a
reworking of the old Novice license and would require a new question
pool.

2) Putting most of the Tech test stuff into a new revised General test
(because there won't be any more Tech test).

3) Removal of the code test requirement from all but the Extra.

4) Upgrading all existing Techs and Tech Pluses to General

5) Upgrading all existing Advanceds to Extra.

I think 1) and 2) are a very good ideas

> >>Yet now I see that same person
> >>supporting free upgrades that involve not even having to take *written*

> Mistake number one is that this doesn't "make things right".
>

> Mistake number two is assuming that this will be a one shot deal.

It will be, because after it's done there won't be any more Techs or
Tech Pluses. Or Advanceds. They'll all be Generals or Extras. No new
ones to be
issued.
>
> What is the rationale for the return to more stringent requirements
> after the mass upgrade?

Bingo!

Ham A got his General by passing the Tech and riding the free upgrade
bus.

Ham B has to pass the "NewNovice" (which is easier than the Tech) but
also
the revised General (which is harder than the existing General).

Explain to Ham B why she has to meet higher requirements than Ham A
for the same privileges. (I wanna be there when that is explained!)

> That will be looked at as a clear disincentive
> to adding new hams after the "upgrade" process.

Exactly.

> easier.

That's part of the plan.
>
> But you'll never support that will you?

The privileges of the entry level license will be changed to match the
reduced written exam requirements.

I doubt they were removed, but perhaps I will paraphrase them in a
future post.

But as of now, Carl has not made a convincing case for free upgrades.

That lawsuit has already been dropped. Basically someone getting their
15 minutes of fame.

It is absolutely surreal that the plaintiff's name is Carlin.

There certainly was - in the Star article...

But I think "Kid Rock" was far worse.

I'd love to read it if his talk has been archived somewhere. I'll bet
that if some Shepherd-type individual went out and compiled tales
about all the goofy stunts and missteps kid hams got into back when in
a book it would sell.

> Well, in my case it was a one-time Christmas deal--the one BIG present

I wonder if there are any Allied employees left from the days when
they were in the ham biz.

My first store-bought rcvr was a new Hallicrafters S-40B. Which I
bought from Sears & Roebuck believe it or not. At the time Sears sold
the S-38, the S-40, and a couple higher-end Hallicrafters rcvrs. I
think one of 'em was the SX-71. The S-40 catalog price was $119.95.
But I had an aunt who lived in Chicago and worked for Sears so I was
able to get her employee's 10% discount. A whole twelve bucks. I was
as interested in SWLing as much as I was into becoming a Novice so I

spent more time chasing SW BC "rare ones" than I did tuning the W1AW code practice sessions. Eventually though, maybe a year after I got the rcvr I had 7.5 wpm down cold and was close to 10 wpm so I trundled off downtown, took the test and put the S-40 to the real task.

> Some of that money was also spent on a big U.S. call area map and

He recently retired from Sun Oil and has tapered back from his former volume of QSL work. I haven't done an eyball with him for probably 40 years. It's time to dig him up for a lunch.

> All of this nostalgia has me fired up to grab my collection of the West
> Coast DX Bulletin to re-read some of Cass's gems.

I subscribed to one or another of the dx bulletins but I forget which one it was. I don't remember a "Cass". I had a big asset in the dx spots game, I was geographically right in the middle of the FRC 2m "spots network". I left the rcvr on 24/7, when I heard it light up I knew there was a goodie lurking somewhere, got into the shack pronto, fired up and joined the throng on the freq. Some of the poor dx stations we jumped all over probably wondered what hit 'em.

Then there was the Ham Trader yellow sheets . . I moved a *lotta* gear in and out with those.

I have said as much before, but a real overhaul of licencing will probably require all new grades of licence with all new names and all new test elements. Having read the mail on this proposal, I am convinced that this is the only way to remove the perception of free upgrades. It is only a perception really, as after you change things the same name no longer really means the same thing anyway.

Just for a laugh, let's call the new licences Entry, Average and Superior, just for the sake of this discussion. The Entry licence could have a low power restriction and limit HF operation to a few specific subbands. The Average licence would give everything else, except, say, a short callsign, which would be reserved for the Superior hams, whilst those of us who know we really are superior could keep the calls we have, ROTFL!

Of course, there would have to be rules to determine what class of licence we all end up with. Advanced or Extra would get a Superior licence, Generals would get an Average licence, and Novices would get an Entry licence. There would be, say 18 months notice of this coming into effect, and 12 months experience as a Tech would be required to get an Average licence, Techs licenced for less than 12 months getting an Entry licence (which would give them something like Tech+ privileges anyway, but would probably be a reduction in power). Element 1 would, of course, be abolished next Tuesday!

Have fun replying!

Good point - in the grand scheme of things, it's the ITU who is likely
to blame for the continuation of amateur radio on a global scale - the
ARRL is but one fish in the big sea (well, a whale maybe, but it's a
big sea!)

BTW - it looks like you might be back in the British Empire sooner
than you think - I saw somebody trying to show you the door a while
ago in another post hi!) No problem, as your usher noted, there's
some great SSB DX on 7.050 thru 7.100 - might be worth it!

Precisely. The Extra being issued today bears little resemblance to
the licence of the same name that was issued years ago. Hence the
hostile attutude toward the so-called "Extra-lites".

Renaming and redefining the levels would fix that - although I suspect
that none of the old Extras would ever accept the new category, and
continue to use the old classification as long as they could work a
key - which would by inference make the Superior into the equivalent
of the old Advanced category.......

As an aside - I've been reading through a 1975 copy of the "ARRL
Operating Manual" that I picked up at a hamfest this weekend. Wow -
it was a different world back then in Amateur Radio! Clearly, from
the amount of text dedicated to Morse, message relay, traffic handling
and other such topics, code was king back then! Worth a read, if you
can find one.

A wise man once told me that without proof to the contrary, perception
becomes truth.

My proposal would be to keep Technician, General, and Extra.

Technician would be the entry level license, and would have the same
access as today. This would be the license that allows people to get
their feet wet in Ham radio. VHF and up access allows those that only
want repeater access their hobby, and the 6 meter access gives a taste
of the wide world below.

Tech plus has same privileges as now. Grandfathered in

Testing would be at the same level. Lots of RF safety. No one should
have ANY form of Ham license without being well versed in RF Safety.

General has all the access and privileges as they do now.

Testing would be at the same level, but the tests would have more questions geared towards HF operation. I would add more questions overall (how many here equate more questions with "harder"?)

Advanced has same privileges as now. Grandfathered in.

Extra has all the access and privileges as they do now.

Test would be similar to what is done now, but will cover more of the Electronic area of the hobby.

No code test for any of the licenses.

Novice segments will become part of a band plan for those who want to learn Morse code.

Finally, I would like to address those who wish to "fix" the system.

>>>No proposal fixes the system!!!<<<<<<

Fixing the system would not involve three license classes. Fixing the system would have only one license class, especially since with the end of Morse code testing, there is no reason why the applicant could not study for and take one element that consists of the agreed upon test material.

But that will never go over, so IMO, the only alternative is to make an incremental change in the system that we already have that does not remove privileges, and does not give free upgrades that create more problems tan they solve.

There ya go! The only real changes are to the testing regimen. No one loses, no one gains.

Well like too many people, he is putting the emPHAsis on the wrong sylLABle
in the word Morseman. He seems to choose to ignore that the correct suffix
for a group of humans is -man. Instead he chooses to confuse it with the
gender specific version of the word man. Actually the oldest meaning of the
word "man" is human. Females were "women" and males were "wermen."
Overtime, the prefix for the males was dropped and the single word "man" was
used for both the human race and the male of the species. I think we ought
to resurrect the prefix for the males so that the liberals don't continue
this confusion.

Without the ARRL, US amateur radio would have remained permanently closed after World War I. The other countries did not have enough amateurs to justify keeping the frequencies and it is highly probably that they would have all gone to commercial interests. Everyone wanted the shortwave frequencies at that time and without the US, the foreign amateurs would not have had enough leverage to have held on to the spectrum.

As I indicated in another post, early on in amateur radio, it would have
been easy for the ITU to have allocated all the frequencies to commericial

and government interests. The size of the US amateur community was, in those early days, very probably a key element in keeping an allocation for amateurs.

In large part that's because of US influence at the international level. Also
the IARU, which was founded by guess who?

Except for Japanese 4th class licensees, how many hams are there in the rest of
the planet?

You might want to check out what the rest of the world wanted to do to amateur
radio in the 1920s at the Paris conferences....

Irrelevant to this group, Leo. ARRL "represents all amateurs." They say
so up front.

W1AW reaches the edges of the known world...a couple provinces of
Canada, as far west as Ohio, down to Atlanta, Georgia. Their concept
of "world."

Every single radio amateur in the USA "owes everything" to Saint Hiram
Percy Maxim who "went to Washington" in 1919 to "restore ham radio"
after WW One. ARRL tells everyone that, forever and ever. Happened
85 years ago when all the seven-year-old amateur extras in here were
young. Clap clap.

Wow...like no other magazine or organization "sponsored" (gave
awards) other contests...

> - PRB-1

To help fight the evil, money-grubbing, dictatorial home neighborhood
organizations?

> - Fight against BPL

A few OTHER companies and organizations and LOTS of individuals
have voiced their objection to BPL here, PLC overseas. There's over
5000 Comments on NOI 03-104 on the FCC ECFS not from ARRL.

> - Best ham magazine ever printed (QST)

Hardly. RSGB's "Radio Communication" is an English language
monthly with a wider scope of amateur radio interests.

QST NEVER compared to HAM RADIO magazine during HR's 22
years of independent monthly publication. HR was far better, did
not cater to any BoD stuffiness.

> - Representation in Washington and internationally, as well as
>information.

Special Interest Groups abound in DC. All it takes is money to pay
them for their services representing the BoD's opinion.

With the Internet, ALL citizens can now communicate with our
federal government at the speed of enlightenment. We don't have to
be filtered through any organization or SIG having its own agenda.

>> I am glad that I have at least had the past 47 or so years of amateur
>> radio.
>
>Without the ARRL, do you think we'd still have amateur radio? I don't.

You owe EVERYTHING to your ARRL. Start paying up...

>I've been a ham for 36+ years, too.

Sure. Just like the standards and practices of the 1930s. You are
49 going on 94.

>> That is how I feel and I just want to voice my personal opinion even
>> though I am going to get bashed for it.

writes:

>reading here since a few weeks, i do agree with the sight of view from your
>standpoint.

Then you have seen some rather strong personal disagreements held
by some old-timers. :-)

>There is nothing wrong to be patriotic. But beeing patriotic does not mean,
>whats good for my countrie must be good for any other one. Amateur Radio is
>a global "institution". The rules for AR are set by an international entity.

In fairness, most of the "discussion" in here concerns U.S. regulations
for amateur radio. In the past those same regulations have been
strongly influenced by the ARRL, the only surviving amateur member-
ship group (started 1914, five years after the first one, the Radio Club
of America that is still in existance but now mostly a wide-range radio
fraternal-historical organization).

I agree on your statement of patriotism. What is going on in here is
that several demand that all be patriotic in Their way. :-)

Radio amateurs use HF bands due to propagation of radio waves
reaching out around the world on HF. U.S. amateurs seem to forget
that for everything but morse code. Some of those insist that morse
code is a "univesal language" without once considering that
international morse code is derived from the English language
characters. Because their primary language is English, those hams
think that using morse code is "easy for all to use." They don't think
of those many millions around the world who don't have a "western"
alphabetic language as their primary language. Learning a second,
or even third language is difficult. Americans seem to ignore that.
Those of the United Kingdom are more liberal since they are next to
the European nations, one tunnel travel away.

>Are this oldtime-hams still use spark gap TX? Thats what they should do when
>argueing this way.

Only in their minds. Damped oscillation RF generation ("spark") is not
allocated in U.S. radio regulations, any radio service.

Some U.S. amateurs arc and spark and sputter in rage when their
opinions are not met with universal love, respect, and adoration. :-)

Most of those will use expensive, top-of-the-line, ready-built, designed
by others equipment with the first mode of radio, on-off carrier manual

keying. For all intents and purposes they could use spark sets
exactly the same way. :-)

Some call that "advancing the state of the radio art."

>The Americans never would have reached the moon, thinking
>this "old days" way.

Quite true! As perhaps the only one in here who ever worked on any
Apollo program effort, I am familiar with the way NASA engineered
the whole thing. I felt fortunate to greet and shake hands with two
astronauts, John Young and Robert Crippen...myself and hundreds of
others at Rocketdyne in California after the first successful Shuttle
space flight.

What is curious is the self-serving nature of the ARRL in describing
those astronauts who also hold Technician class licenses as "ham-
astronauts." The way the league describes them it is as if they
got to be astronauts "because" they were radio amateurs. Not true.
Obtaining a U.S. amateur radio license was just another requirement
by NASA so that they could provide a small extra service to the
citizens of the USA via amateur radio. It was not at all necessary to
the American space program overall. It is NASA public relations.

>What makes me frightened is, theat there is no will to change ones way of
>thinking into a global range. The kind of "this is my fence, I dont care
>whats outside" mentality is not a hams mentality. It reminds me of the
>mentality of the ancient "southstates and yankee" disputes in the OLD US. It
>must be the genes, keeping fellow hams from going the right, the ham way.

That is human nature. :-) But...those hams who think that way are
still hams and will not tolerate being criticized!

What happened with the USA "incentive program" of multiple classes
of amateur radio licenses is that American hams were put into a very
old position of class distinction, of some "being better" than others
because they had a "higher class" license. One can almost feel the
physical discrimination from such. There is not enough unity, solely
that of some being higher or "more important" than others of "lesser"
class. Those who achieved the "highest" class some time ago want
to assume a royal status and rule over others...they feel themselves
"superior." :-)

That trend to class consciousness is going away, but very slowly.
The American amateur radio regulation restructuring of year 2000
dropped the number of new license classes from six to three. The
tested morse code rate has dropped from the three rates to just one.
To those of old-time incentive plan licensing this was "the end of
their world" and they were outraged, horrified. Too bad. They do not
think of far more citizens who could not see the original class
distinction and turned away from amateur radio activity, not wanting
to be a part of such class distinction.

There are many many more hobbies and recreations available through electronics now. Robotics is a growing interest. Radio-control of aircraft and vehicles is another. Electronics advancement and general communications theory improvements have made the Internet possible. We can now communicate with others of same interests at the speed of light without needing radio and sunspot activity. Internationally. The only barrier is lack of a common language. Morse code was never a common language, only a standardized English representation by law.

Dee,

Perhaps, but I'm not comfortable that it is fact. In 1917 (or 1916,
depending on the source), there were some 6,000 amateurs operating in
the US - not sure how many there were when amateur radio was turned
back on in 1919, but it was probably less than that, due to losses in
the war. Even at 6,000, though, would that constitute a sufficient
number of amateurs to influence policy on a global scale? Keeping in
mind that the US, as a member of the ITU, has voting privileges but
not an overwhelming influence. Foreign stations still boom over here
today on part of our 40 meter band - because the ITU agreements say
they can. The Americas can request, and debate, and vote upon, but not
control ITU policy. I doubt very much that they could back then,
either.

According to The Wayback Machine, it wasn't commercial interests that wanted control of these bands post-WWI (all radio bands, actually!) in the US - it was the US Military. The ARRL did a fine job of lobbying the US government to have the frequencies reopened to US amateurs - but I don't think that the rest of the world would have walked away from amateur radio forever if the ARRL had been unsuccessful. And, in the absence of the ARRL, other alliances may have been formed to lobby for this right - just like they did in the rest of the world.

In fact, your happy ham neighbours to the North were legally transmitting again as of May 1, 1919 - a full 5 months before the US amateurs were allowed back on the air on October 1st of that year.

As I recall from history class, the US military hasn't attemped to enforce US policy up here since 1814 - and never successfully prior to that :o0

Source: http://www.ve4.net/history/part1.txt

Does anyone have any further documentation pertaining to this subject? I know that the Netherlands didn't regain operating privileges until the early 1920s - Alun, old son, what was the history of this over the pond?

Allied Radio is still an electronics parts distributor, was never solely in the "ham biz." Allied is now a division of Hamilton-Avnet and MUCH bigger than it was when they had a single building in Chicago. I'd been there...impressive showroom to a 15 year old, but not that great in 1956 when I was 23.

Newark Electronics is still in the electronics parts distributor biz, also bigger than it was in the 1950s.

There's lots more places to get parts for hum radios now, but the old-style parts of a half century are very, very scarce. :-)

You really ought to get out more...

You were THERE then? :-)

Nooooo Mama Dee, U.S. radio amateurs got tossed off of MF because
they were interfering with broadcasters. That's the REAL radio history.

You need to get an Internet visa and visit some of the Yurp ham
websites to learn their side of things. Those places don't have the
league SPIN operating to selectively edit out things the league
doesn't want you to hear.

Commercial radio did NOT "want all the shortwave frequencies" in
1919, but rather the opposite. Once the commercial radio services
found out about HF "skip" propagaation, they studied it, grabbed it up
some years later through the CCITT, and ran with it for carrier service
in communications. They did right well with it until about 1960, too.

>amateurs.

There was NO "ITU" before WW2. There was the CCITT.

The size of the US amateur community was, in those early days,
miniscule compared to the broadcasters getting started. Ham radio's
oinks weren't near "numerous" until AFTER WW2.

But, to hear the spin from the league, they and Stl Hiram practically
invented ham radio and saved it from perdition.

Selective editing of the REAL history of all radio doesn't make it
"truth." Except to the devout Believers...

>ago in another post hi!) No problem, as your usher noted, there's
>some great SSB DX on 7.050 thru 7.100 - might be worth it!

The last time there was any significant increase in HF ham bands
was 1979, 25 years ago.

As far back as 8 years ago, the NTIA's survey of future spectrum
requirements for amateur service indicated that over 1 MHz of
ham band space would be needed...as indicated by a footnote
saying that an ARRL person said that. ARRL has lobbied only for
the "60 meter" band in HF and got all of five CHANNELS. U.S.
league membership dollars at work... :-)

Yurp has a LF band. USA doesn't. Over here there's only the
160 to 190 KHz FREE band (no license required) on LF, sure as
heck no real power required either).

I love all the "effort" expended by the ARRL to get more HF band-
space within borders.

Perhaps, but are there specific historical facts which support that
theory?

The ARRL was a founding member of IARU - not the only founding
member....

>
>Except for Japanese 4th class licensees, how many hams are there in the rest of
>the planet?

Well, my trusty EuroCall 2003 CD lists 276,446 callsigns in Europe
alone - even if a couple of guys died, there's probably more than that
now. I don't have figures for Asia, Africa, Oceania or the rest of
the Americas (except that there's around 56,000 or so up here...).

Quite a few, anyway! DX wouldn't be the same without 'em..... ;)

That's a lot of real estate, covering some 150 or so countries, give
or take a few....

>
>You might want to check out what the rest of the world wanted to do to amateur
>radio in the 1920s at the Paris conferences....

Would you have a link handy for that one?

And, did the ARRL actually exert that much influence over the other
members? As there is one IARU zone for each ITU zone, I'd expect that
they would have infinitely more say in the Zone 2 group than the
others...they may have been founders of the IARU in 1925, but they

didn't own it - did they?

That's because of a compromise worked out in 1938.

>The Americas can request, and debate, and vote upon, but not
>control ITU policy. I doubt very much that they could back then,
>either.

The point is that the cause of truly "amateur" radio was largely the work
of Americans. In fact, amateur radio was not recognized as a separate
radio service by international treaty until 1927. That recognition was
due in large part to the work of Maxim, Stewart, Warner and others at
the various conferences, including Paris in 1924 and 1925.
>

I think they would have. Most of the rest of the world had very few if any
amateurs. Many countries could not understand why anyone would want to
pursue radio as an end in itself. Many also wanted total government control
of radio. Very few outside the US thought amateurs needed more than a few small
bands and more than a few watts.

>And, in
>the absence of the ARRL, other alliances may have been formed to lobby

That was one of the things I tried when I rbuilt the TX back in the
summer - ended up with an 0A2WA regulator and a 6136 in the LMO. That
brought it much closer...that and some conductive silver grease in the
bearings of the LMO tuning cap (I didn't even know they made that
stuff till I dug into the Web and discovered that TRW used it when
they built the LMOs for Heath, and it dries out over time.....)

That is very possible - it's also possible that the drift is in one of
the other oscillator sections other than the LMO. Haven't had time to
tear it apart and see yet....one of these days!

That was well after opeating privileges were restored in 1919, though
- the IARU came along in 1925. We had been on the air for six years by
then...

>And there were how many of them?

Infinitely more than in the US, until October! :) Point was, our
privileges were restored well before the ARRL was able to get that in
place in the US.

Numbers don't always carry the greatest influence in political
decisions - there is also sovereignty, and little things like that...

Although records in the early 1900s are sketchy, if you pick periods in time that are documented, the number of US amateurs was roughly equal to the rest of the world combined. This is still true today if one excludes Japan, which has over 1 million licensed users but with an abysmally low activity rate (Japanese licenses are for life, many children are licensed in school programs and never use the licenses, and no renewal is required). While the US would not have been an "overwhelming" influence, it still would have been a major player. How long could amateurs in other countries have been effective against government and commercial interests in the ITU if the US had remained in an "amateur radio black hole?" It is difficult to say of course but there would have been much less strength available to resist the encroachment. Yes one cannot say with absolute certainty which way it would have gone but I do believe that amateur radio would be a lot less common now if the US had not been involved. Also keep in mind that due to our form of government, our civilian population (in this case hams) do have more influence in shaping our governments approach to items like amateur radio than is and was prevalent in a lot of countries.

>

I did indeed mean to include military. Sorry about that. In the context of lobbying the US government for keeping amateur frequencies and re-opening them after WWI, I do believe that in the absence of the ARRL another body could have formed (and probably would have) and done the same as the ARRL. But you know what, we would then be having this same discussion of "ZZZZ" organization and the people who today slam the ARRL would be slamming the "ZZZZ." The rest of us would then be defending "ZZZZ". Same game, different names.

But would they have had enough clout in subsequent ITU conferences to stave off the commercial and military seekers of the bands. In any disagreement, you don't want the strongest player sitting on the sidelines or playing on the other side.

Excluding Japan, the last time I checked the Radio Amateur Call book listed
about 600,000+ for the combined rest of the world. Roughly equal to the
number of US Amateurs.

That simply illustrates that the rest of the world cared less about amateurs privileges than the US did. It indicates that the various governments wanted these frequencies for themselves as many of the shortwave broadcasters are government entities in their respective countries. That is the other side of the coin. If the US had not been in there from the earliest days supporting amateur frequencies, today's picture could easily be very different.

According to W2XOY, the upgrade to Extra given to pre-1917 Hams with a
General or Advanced-class license started in 1951:

http://groups.yahoo.com/group/Ham-Radio-History/message/5330

along with the renaming of Class A to Advanced, Class B to General, C to
Conditional, and the introduction of the Novice and Technician.

So there was some short period of time (until the "Giveaway of 1953"),
where this "free upgrade" gave additional phone privileges on 75 and 20
meters for some of those pre-1917 hams. Specifically, those that held a
General class (formerly "Class B") license. That would be *accurate*.

More information on this, just received today, is given below.

>That's a completely different scenario than offering a free *upgrade* to almost
>60% of existing hams,
>plus any that might get ham tickets before the rules change.

>>percentage would be a threshold? You say that it is wrong to
>>grandfather 60% of all hams, but you might be willing to accept
>>grandfathering of 2% of all hams.

>And I might not. Depends on the situation.

>And the more I think about it, the more I think the old Extra waiver was a bad
>idea, and that there may be
>no scenario that would be worthwhile.

>>What about a proposal that
>>grandfathers some percentage of hams in-between?

>I say no to free upgrades, then.

So nearly all of the previous discussion above is moot because there is
no "free upgrade" scenario that you will support regardless of the
percentage of hams affected, or their status/seniority.

>>What would be your
>>greater objection, grandfathering all of the Techs, or grandfathering
>>all of the Advanced?
>>
>What's the difference? They're both bad ideas.

Prior to your latest reply, I might argue that since the latter would
affect a lower percentage of existing hams, who have held their class of
license since at least April 15th 2000, you might find it more

palatable. However, since you have decided that no such free upgrades are a good idea, the distinction is now a moot point for the purpose of this discussion.

>>Remember that at some time in the future, we may be looking on this
>>grandfathering as occurring at some asymptotic point in the past, as
>>with the pre-1917 waiver above.

>You mean like when the Advanced has been unavailable for 35+ years and their
>numbers are down to about 1% of the ARS total?

Well, yes, that's what I was driving at. You want to wait until then. I want to deal with the matter sooner. At least I got you to explicitly bound your answers tighter than "never" or 0%. And what would you do then?

>>You ask below what is the long-term
>>plan. I say one aspect of the plan is to be able to look back on this
>>grandfathering in the same way that we look upon the pre-1917 waiver.

>We don't look back on it the same way.

>And why was it done?

The Restructuring FAQ at arrl.org omits the mention of waiver of the written test, so it too is incomplete. I dropped a line to N1KB, who is listed as the author of the document, with a request for correction and clarification. He replied to me with pointers to some sources, including Ham-Radio-History group noted above, which dates the origin of the waiver, and "free upgrade," to 1951. W1UED just replied today with an answer as to why. George E. Sterling, W1AE, was the first (and likely only) radio amateur to come up through the ranks at the FCC and be appointed Commissioner. The Amateur Extra license first appeared in the 1920's and lasted through the 1930's, when it was discontinued as a budget-cutting measure. During the 1951 restructuring, which restored the Amateur Extra license, W1AE was an FCC Commissioner:

http://www.fcc.gov/commissioners/commish-list.html

As a pre-WWI licensee himself, he thought it would be an appropriate honor to that group of hams if they were given the restored Amateur Extra license, and had the political clout to make it happen. So, the 1951 restructuring gave anyone who was licensed prior to April 1917 and who presently held a General or Advanced-class license, a "free upgrade" to Extra.

The following QST article describes the 1951 Restructuring and FCC Dockets 10073 and 10077:

http://www.arrl.org/members-only/qqnsearch.html?search=1&words=FCC+dockets&year=1951&selpub=QST

(ARRL Members-Only Link)

A photocopy of the full article is available for $3 ($5 for non-members)
postpaid from the ARRL.

That still supports my original assertion that free upgrades given to
existing licensees, based on seniority or status, can be
non-controversial, especially when viewed from the long-term future.

>>
>>>>>- Amateurs who miss the one time upgrade have to take more tests than
>>>>>those who didn't. How do we justify that?
>>>>
>>>>It's called "grandfathering," which is done in more regulatory contexts
>>>>than can possibly be named here. Due to the need for certainty in the
>>>>law, it is nearly always based on hard cutoff dates. Technologies,
>>>>practices, and people change over the very long timeline that laws and
>>>>regulations are required to cover. It is not possible to predict the
>>>>future with certainty, so laws and regulations must change to reflect
>>>>current knowledge. It is also impractical for society to retest,
>>>>recertify, or revalidate every existing entity against current
>>>>requirements.
>>
>>>None of which is proposed.
>>
>>But when considering alternatives, one really has to identify all
>>implicit alternatives, and argue for or against them (avoiding the
>>logical pitfall of false dichotomies, trichotomies, etc.). The status
>>quo, which you have advocated, and might be labeled alternative #4 based
>>on your exchange with Bill Sohl, is one such implicit alternative.

>To put it simply: Just leave the closed-off classes alone, and let them
>go away by attrition.

>This is exactly what was done with the Advanced from the beginning of 1953
>until 1967 - more than 14 years. What problems did it cause?

The Advanced-class was eventually opened back up to new licensees, so we
do not know what the longer-term effects would have been. I see no
realistic likelihood that Advanced will be (or even should be) reopened
in any foreseeable future. The outcome that you propose, which is to
carry them on the books for at least 35 more years or until they
constitute less than 1% of all hams, may introduce further problems than
the previous, and much shorter, 14-year period.

>> I
>>would argue against that, for the reasons I have given previously
>>(streamlining of license classes, streamlining of band plans, reduction
>>of regulatory burden, reduction in confusion for amateurs and the FCC,
>>harmonization with the deletion of S25.5 and with other countries'
>>regulations, etc.).

>All it takes to keep those classes is a few sentences in Part 97.

"A few sentences" in laws or regulations can have non-trivial
implications about the regulatory infrastructure that is necessary to

give them force. An Advanced-class license is one more alternative to program into the licensing computer, one more piece of regulation to be understood and enforced by regulators, and overall, one more class of amateurs to track and incorporate into any regulatory policies and agendas. The implementation of all of that is significantly more than a few sentences.

>>
>>If license classes are consolidated to a smaller number, one alternative
>>is simply to grandfather existing hams, which the ARRL has advocated.

>A more accurate term is "free upgrade", because that's what it is.

>"Grandfather" implies letting a person keep what they already have without
>recertification. That's not what is proposed by the ARRL BoD for Techs and
>Advanceds.

>>One other implicit alternative (say, #5), is to make every Novice,
>>Advanced (and possibly non-Plus, or would that be non-Plussed, Tech)
>>come back in to take written tests to upgrade to the next level, or
>>otherwise lose privileges.

>That's the worst alternative.

Which is why I specifically identify it and dismiss it early.

>>I would argue against that also, for the
>>reasons I have also given previously (it is impractical to retest
>>everyone,

>It could easily be done over time by saying that you either retest before Date
>X
>or you'll be reclassified at a lower license class.

There is a legitimate distinction between "easy" and "straightforward." Anyone with engineering experience surely knows that something could be conceptually simple, but still complex and time-consuming in its actual implementation. Mass re-testing might be straightforward, but would not be easy within FCC and VEC budget/manpower constraints.

Mass re-testing would be a regulatory burden for the FCC, a personal burden on VEC's who would have play de-facto judge and jury for large numbers of existing peers, friends, fellow club members, etc., concerning whether or not they could retain former privileges (what volunteer would want to endure that for very long?), and would go against where the FCC is heading, which is towards less regulation and fewer grand schemes. I might also argue that mass-retesting is sounding very much like a repeat of the scenario played out in the 1960's with Incentive Licensing.

There's a lot of debate in this newsgroup about the Incentive Licensing scheme of the 1960's, who initiated it, what was intended, who supported it, why it failed, who was to blame, etc., but one thing that most can agree on is that it's very easy to start out with good intentions, and

what comes out the exit door of regulatory agencies might be
unrecognizable as something that would give the desired result. Hence
the expression, "The road to hell is paved with good intentions." Mass
re-testing could also be viewed as well-intentioned, but ultimately a
road to hell.

So, it's a good thing that neither of us are arguing in favor of testing
to avoid losing privileges, right?

>>and such existing hams are a large, stable user base such as
>>that in the definition of grandfathering below).

>"Large, stable user base"? We don't really know about that. How many
>of those folks are active? Why have so few Advanceds upgraded to
>Extra?

You are teetering very close to making a non-falsifiable argument here.
You argue here, and in other threads, that Advanced should be left alone
because:

- There are still quite a few of them, who are happy with their present
privileges, who would get a free upgrade unfairly, and crowd the Extra
phone bands.

AND

- There may not be very many of them, active at least, so any upgrade
would not give much benefit, anyway.

You also argue that Novice should be left alone because there aren't
very many of them, but then advocate restructuring that you believe
would bring back its "heyday" with many more licensees in that class,
which of course, should then be left alone.

Which is it? Too many, or too few, to justify elimination? If neither
is a sufficient criteria to argue for or against elimination of a
license class, then that's a non-falsifiable argument.

>>>>The web site for Malvern Instrumentation gives a good definition of
>>>>grandfathering in a technical context:
>>>>
>>>>"Grandfathering is the practice of claiming exemption of older systems
>>>>from validation regulations and requirements on the basis that these
>>>>systems have proved their reliability by adoption for a long period of
>>>>time by a large user base."

>IOW, we allow them to continue doing what they're doing because they've shown
>a lack of problems in the past. But we require more of new systems.
>It *doesn't* say we allow free upgrades.

When you say "we require more of new systems" above, are you referring
to people or license classes? There is a subtle distinction. A group
of people may not want to change, but license classes may need to. A
set of license classes is a ladder, to be climbed as far as the licensee

wishes to develop his skills. It is also a taxonomy, with a specific regulatory purpose. That purpose is to ensure that limited frequency spectrum is being put to the best and highest use via the distribution of privileges over that spectrum. Implicit in this is structuring the license class system to ensure that all amateur radio spectrum (HF, VHF, UHF, Microwave) is not only used, but used well, in ways that fulfill the Basis and Purpose (FCC Part 97.1).

Since technologies, modes, and frequency usage patterns change over time, the taxonomy should change as well, hence the need for periodic restructuring over amateur radio's 100-year lifetime (Though I would argue that not doing the "Giveway of 1953," and staying with the 1951 restructuring until the no-code issue came to a head in the 1980's, would have avoided the backlash that resulted in Incentive Licensing of 1968). But what do you do when license classes change and people do not? It is preferable to not have existing licensees lose privileges. There is no compelling regulatory purpose to having both an Advanced and Extra class license at present (if there ever was). So, given all of that, combining both licenses into one class of license is a way of making existing people fit new license classes without having them lose privileges. Doing this constitutes a form of grandfathering.

>>>>
>>>>Grandfathering in the context of ham radio recognizes that existing hams
>>>>have not only passed the tests in effect at the time, sometimes topics

>>
>>>I disagree. What's wrong with simply allowing Techs, Tech Pluses and
>>>Advanceds to upgrade in their own time?
>>
>>>What is the sudden need to eliminate those license classes? The Novice and
>>>Advanced have been closed off to new issues for almost 4 years, and their
>>>numbers have declined. And from 1953 to 1967, no new Advanceds were issued.

>>>Did any of that cause problems?
>>
>>>What's the rush?
>>
>>>Are the written tests too hard?

>Well? The current Extra was recently earned by a bright seven year old - can
>we really say that it's unreasonable to expect others to do what she did for
>the
>same privileges?

As others have pointed out in other threads, the 7-year old Extra is a
statistical outlier, one of a handful in amateur radio history, and not
a typical example. The more typical, and meaningful, example of an
entry-level ham would be one who was high school or college-age. The
greater numbers of these typical entry-level hams would mean that they
would have a more profound impact on the shaping of the future of
amateur radio, anyway.

>>>>>- Decreased reason for more than half of all hams to upgrade by testing.
>>>>
>>>>No proposal is perfect. Weigh this one against the pros.
>>>>
>>>I have. The cons win.
>>
>>>>>>Pros:
>>>>>>
>>>>>>Avoids having to wait until the last Advanced class license expires to
>>>>>>refarm the Advanced phone bands.

>>>>leave it to Extras, give it to Generals, or would you otherwise split it
>>>>up in some way?
>>
>>>Why does it need to be done at all? Is the Extra written that hard?

>Why do you avoid these simple questions?

Because sometimes simple questions are loaded with built-in assumptions
(e.g., "Why won't you join me in voting to ban COP-KILLER bullets?" or
even the classic, "Have you stopped beating your wife?"). Furthermore,
you see simplicity where I see complication, and vice-versa.

>>
>>So you would argue that any refarming would be done at some asymptotic
>>point in the far future, indistinguishable at present between "decades"
>>and "never."

>I'm *asking* what the problem is with leaving some things alone.

The question has been asked and answered, though I have given you an
answer you disagree with. Asking the question repeatedly will not
result in a different answer from me. Put away the rhetorical bludgeon.

>>
>>>>
>>>>>>Alternatively, avoids opening up the

>>>>Decades in the future, or never?
>>
>>>I don't see any reason to "refarm" them at all. Not at this time, anyway.
>>
>>>Note that in 4 years, the number of Advanceds has dropped by only about 16%.
>>
>>>Seems to be a pretty popular license even today.
>>
>Note also that several Advanceds have said they *don't* want an upgrade, free
>or not.
>I don't understand why, but that's what they've said.

>>>It sounds to me like you want all Advanceds to become Extras so that the
>>>Advanced subbands can become General bandspace. That's not part of the ARRL
>>>proposal, though.
>>
>>No, I never said that.

>No, you didn't. That's why I wrote "sounds to me".

My first draft of my reply said, "No I never said nor implied that." I
edited it to achieve economy of words, because even if I somehow implied
that I supported the entire ARRL proposal, adoption of that proposal

would not giving the entire Advanced phone subbands to the Generals.

>>I would combine Advanced and Extra phone bands
>>into just Extra phone bands, and leave the General bands as they are.

>That's the status quo! It's not "refarming" at all.

It still removes one color bar from the frequency allocation charts (for Advanced), so is not strictly a "status quo" solution like you have advocated.

I suppose a definition of refarming is necessary for this context. Even the ITU seems to struggle with the meaning of this word (search for "definition of refarming" on Google). A commonly-accepted definition is:

"Moving one service out to make way for another that would use the spectrum more optimally."

So, really, neither of us are using the word entirely according to this definition. Even if we substitute "class" for "service" above, no General, Advanced, or Extra is being moved out to make way for anyone else under the two alternatives offered in this discussion (mine, and the ARRL's). Even Novice and Tech Plus hams only face a "lose some, but gain a lot more" prospect under the ARRL proposal. You would define refarming as making different license classes within the same service either gain or lose spectrum. I would agree that this would constitute one kind of refarming. I would also assert that the elimination of license classes within a service to simplify spectrum allocation is another kind of refarming.

>>That doesn't mean that I wouldn't support frequency shifting, such as
>>that proposed to make 40 meters a primary amateur allocation, or part of
>>Novice band refarming. Just that I would keep the proportional amounts
>>roughly the same. I realize that the current ARRL proposal splits up
>>the Advanced phone bands, giving proportionally more to the General than
>>the Extra phone bands on 80 and 40 meters, and proportionally less on 15
>>meters (no changes on 20 meters). I do not strongly support that, but
>>even that proposal isn't giving the entire Advanced phone bandwidth to
>>the Generals.

>And if nothing at all is done, the results are almost the same as what you
>propose.

Emphasis on "almost." One of my motivations in this extended discussion is to determine our agreements and disagreements, what are hard-and-fast beliefs, and what might be open to compromise. In case you haven't figured it out, I'm gathering verbage for a draft of my comments on any future NPRM. You seem to be alternating between active opposition to, and fatalistic acceptance of, the possibility that Element 1 will be deleted. Perhaps you want to "go down fighting" on this issue with the ARRL and the FCC. Your ideal-world position of no changes allows me to rebut with the continued complications that it implies. On the other

hand, I too believe that Element 1 being dropped is likely, but I also
believe that changes to license classes and band allocations are still
very much up in the air at this point. Because of this, I will happily
play "what-if" with the various scenarios (as the FCC might do them in
any combination) while also indicating which ones that I favor.

So that there is no further confusion about what I favor, I support
dropping Element 1 (which would merge Technician with Technician-Plus),
giving present Advanced-class licensees a "free upgrade" to Extra, and
keeping General and Extra-class phone bands substantially and
proportionately the same (save for some small shifting/resizing for
Novice-band refarming and making all of 40 meters a primary amateur
radio allocation).

>>
>>>>>>Also avoids having to accommodate a license class (Tech Plus) that isn't
>>>>>>even carried in the FCC database anymore, which is a records/
>>>>>>enforcement problem for the FCC, and requires the licensee to keep

>>>isn't a big problem, from what I see.
>>
>>You argue that it's not an enforcement problem because few or none have
>>been caught. I would argue that it is an enforcement problem because it
>>would be very hard to catch someone, especially if confirming who has
>>what privileges requires documentation that is no longer in the FCC
>>database, and might no longer be retained by hams or VEC's. The FCC's
>>limited staff time is probably being aimed at big fish, such as Advanced
>>and Extra-class scofflaws engaging in power and interference violations.

>You might want to read the letters. They're pretty evenly distributed, license
>clas wise, except for Novices.

I have read them. Even if they are evenly distributed in numbers, they
are not evenly distributed according to number of licensees in each
class. If they were, then there would be approximately one Extra-class
violator for every three Tech/Tech-Plus violators, or every 1.5
General-class violators. I stand by my original argument.
Specifically, that the FCC's enforcement agenda is mostly aimed at
high-yield (easier to catch/more serious punishment, aka "big fish")
violations "such as" (i.e., not limited to) power and interference
violations at higher classes of license. Such licensees are being
subject to proportionately more enforcement scrutiny than other classes
of license.

>>>>Even if you argue that FCC

>>>>there are still all those Novice and Advanced class licenses that will
>>>>likely exist in the database for decades to come.
>>
>>>It makes sense to grandfather existing Novices to the "NewNovice" (or
>>>whatever
>>>it is called). There are only about 32,000 Novices left now, down from just
>>>under 50,000 after restructuring.
>>
>>>What *is* the problem with Advanceds just staying as they are? Have you not
>>>read from the Advanceds who say they *don't want* to become Extras?
>>
>>Which is as much of an argument as "Have you not read from the hams who
>>say that they *don't want* to have ham radio examinations without Morse
>>code?"

>You keep avoiding the question.

You keep avoiding my answers.

>>>>
>>>>>Why not just give all the existing Techs, Tech Pluses and Novices the

>>>>>"NewNovice" privs, in addition to their existing privileges? The database
>>>>>doesn't need to change at all.
>>>>
>>>>Did you notice that Novices actually lose privileges? See the FAQ
>>>>document above for more details. In particular, power limits are
>>>>lowered from 200 Watts PEP to 100 Watts PEP on HF bands except for 10
>>>>meters, and 50 Watts PEP on 10 meters.
>>
>>>Is that really much of a problem? How many Novices are on the air today
>>>running more than those power levels?
>>
>Well? You know the answer as well as I: "Very few".

The same argument could also apply to Tech/Tech-Plus, as "very few" of
them operate below 30 MHz between 100 and 200 Watts either (though
significantly more might operate between 50 and 100 Watts on 10 meters).
The simplest alternative is to make Tech lose privileges, in the form of
reduced power limits, below 30 MHz in order to have one Novice/Tech set
of privileges on those bands.

Did you change your mind on this issue? According to the following
recent posting of yours:

http://groups.google.com/groups?selm=20040207165454.11022.00003990@mb-m14.aol.com

you advocate doing just that. No argument from me, but it does suggest
that you realized the additional complexity of trying to both fold
NewNovice privileges into Technician *and* keep Technician from losing
privileges, so decided against keeping the latter constraint.

>>>> From the FAQ:
>>>>
>>>>"The reason behind the change in Novice power limits is to avoid having
>>>>to examine entry-level applicants about how to evaluate amateur stations
>>>>for RF safety. "
>>>>
>>>>I'm sure that you would argue that Technicians should retain their power
>>>>limits (1500 Watts PEP) on 6 meters and up, and I would agree, but what
>>>>about HF? Should Technicians lose privileges on those bands, by having
>>>>their power limits lowered (from 200 Watts PEP), or should there be
>>>>separate power limits for Novice and Technician on HF? This is starting
>>>>to get more complicated than before.
>>
>>>Not at all! Where an existing ham has greater privs, those privs would be
>>>retained. This has been done with Tech Pluses for almost 4 years now. FCC
>>>proposed it and enacted it, btw. Why can't it be done for existing Novices
>>>and Techs?
>>

But you agree that it would be a better idea to have just one set of
Novice/Tech privileges below 30 MHz even if that means Tech might lose
privileges due to lower power limits on those bands?

>>So, again, as part of your status-quo alternative, you want to keep in
>>place the regulations and bandplans for six classes of license, only
>>five of which will be tracked in the FCC database six years from now.

>Why not? Most of that is just a few lines in Part 97.

>>>The 1998 proposal from ARRL Hq was for Tech Pluses and Novices to get a
>>>freebie
>>>to General - and FCC said no. What has changed that suddenly makes free
>>>upgrades a good idea?
>>
>>The ARRL argues that this is now the second round of restructuring.

>Then why wasn't the BoD ready for it?

They were probably as "ready" for it as they were for the first round of recent restructuring in 1998-2000, or even the multi-year build-up to the 1991 Report and Order for the no-code license. Maybe they want to cross bridges when they feel that they have come to them? Maybe they will act decisively if and only if there is the possibility they will be left behind (such as from other parties submitting competing proposals that are assigned RM numbers)? Maybe their inside-the-FCC spy only now just phoned Newington with the coded message, "Raven is moving on Morris, repeat, Raven is moving on Morris," and they are now busy trying to channel the spirits of Hiram Maxim and Vic Clark for guidance? You tell me.

>>The FCC prefers to revisit things every few years, and do things in
>>manageable chunks.

>Meaning no disrespect, but - how do you know?

Because an interested observer can see that this is how the FCC wants to do business these days, via biennial regulatory reviews. Among other things, it makes Congress happy that the FCC continues to "improve" itself by reviewing regulations every couple of years. The FCC also wants to make sure that it leaves enough for future rounds.

>And if that is, indeed, the case, why not make a few changes now
>(like the "NewNovice") and revisit in a few years?

It is likely that the FCC will move on deletion of Element 1 very shortly, now that S25.5 is being deleted and there are several proposals on the table that have been assigned RM numbers to deal with this event. Your recent poll conducted on this newsgroup has most predicting action on this matter sometime in 2004:

http://groups.google.com/groups?selm=20040110155603.11891.00003578%40mb-m11.aol.com

What is less clear is what other types of reorganization the FCC might choose to adopt at this time. The Novice-band refarming proposal has been on an FCC staffer's desk for about two years now. You might argue that this is a sign that it would be rejected. I might argue instead that the FCC is waiting for wrap-up of all related issues, including S25.5, and to approach Novice-band refarming as part of a periodic

review. If this is a "window of opportunity" that might not come again
in a while, and it is uncertain which proposal items the FCC might
choose, a good strategy would be to put all reasonable proposal items on
the table, especially if they can be argued to be interrelated to one
another as part of an overall, long-term plan.

Your suggestion above, to "make a few changes now" and "revisit in a few
years" might be reasonable *if* we controlled the agenda. We don't, the
FCC does. Because of this, omission of some items now, in a misguided
attempt to dictate what should and shouldn't be done, and in what
timeframe, might cause FCC to later ask, "Why didn't you bring this up
before?" or worse, "What are you trying to hide?"

>>>What we have now is a system that tends to funnel newcomers into VHF/UHF
>>>amateur radio, and manufactured equipment. And away from HF and homebrewing.
>>>A restructured Novice could change that.
>>
>>Part of arguing for a new Novice license would involve identifying what
>>has not worked with the present Novice license, and what changes would
>>somehow "open the floodgates" with the proposed future one.

>What didn't work was simply this: Getting a Novice required passing two tests
>(code and theory) while getting a Tech after 1991 required passing just one. So
>most new hams went for the Tech because it was perceived to be easier.

>On top of that, the Novice didn't have 2 meters.

All true. But if Element 1 is dropped, and no other changes are made,
then the current Tech becomes what the former Tech-Plus was, with HF
privileges and one exam. Sounds simple to me. Why can't that serve as
an entry-level license? Why try to resurrect the dead-horse of Novice?
Could it be that people are willing to take a harder exam to obtain more
attractive privileges?

>>You argue
>>that most entry-level hams are being funneled to VHF/UHF.

>They are. Look at the privileges. ALL of amateur VHF/UHF vs. four little slices
>of HF.

I don't disagree. That's why I said, "I might also argue..." below
instead of, "I might argue instead..."

>> I might also
>>argue that there are not very many entry-level hams at all, especially
>>younger people, regardless of where they are being funneled.

>Look at

>http://www.ah0a.org

>for numbers of new licenses granted each month.

>In the past 12 months FCC issued 20,256 new amateur licenses. Is that "not very
>many"?

The answer is more complicated than that. Numbers of new amateur licenses sounds great on paper, as it would be about 3% annual growth. However, this does not take into account the number of amateurs leaving from non-renewal, or even how many of them were very active in the first place. Even AH0A touches on this subject at the following link on his site:

http://www.ah0a.org/FCC/Rate.html

Quoting AH0A:

"If the number of new amateurs being added every month (through renewal, upgrade, or as new amateurs) were equal to those expiring, the average time to expiration should remain the same. Assuming that the distribution of the times to expiration was constant over the future 120 months, the expected value would be 60 months.

A number less than 60 months would mean that the class of licensees is decreasing. Looking at the Chart 1. you can see this is the case for Novice, Technician, and Technician Plus licensees.

In Oct 2000, the average life of licenses for the entire Amateur population will drop below 60 months. Within a year the number of U.S. Amateurs will begin to decline."

Has AH0A's prediction come to pass? Well, according to:

http://www.ah0a.org/FCC/Licenses.html

we're not dropping precipitously (yet), but our total numbers have been flat (within a variance of less than half of one percent) for at least the past 6 years.

But let's look at those 20,000 or so new hams again, as I did argue "new" and not "overall." Making the slightly inaccurate, but simplifying, assumption that distribution of those new hams is proportional to that of the entire U.S. population, that would mean 50 new hams being licensed last year in my local community (based on population figures for my Metropolitan Statistical Area, or MSA). Wow! *FIFTY* new amateurs per year! We could certainly make good use of each and every one of them. We have lots of choices available that would welcome new volunteers with open arms:

- Local ARES and RACES organizations (especially with a recent influx of money and training opportunities due to Homeland Security)
- Weather training and spotting
- HF and VHF nets, including informal commute-time repeater nets
- DF Fox Hunts
- Field Day
- USAF MARS (where not only do you have HF privileges as a Technician, but there is an active user community for more advanced digital modes like MT63 and MFSK16)

or just as dues-paying members of local clubs, who can socialize with our experienced members, learn things from club programs, and undertake their own station projects with guidance from our Elmers. Field Day is not the only opportunity to guest operate an HF station if you do not have one of your own. We have even had local club members open their homes and well-equipped HF stations to any and all interested guest operators for special operating activities such as club anniversaries, QSO parties, Veteran's Day, etc.

Oh wait, where did they all go? All of the above activities are starved for new volunteers, and have exhibited flat or negative growth in recent years. I look around at all of the above activities (metaphorically so on the bands) and I see substantially the same people I have seen for the last several years.

So, to answer your question, yes, that is "not very many."

>>The
>>youngest members in most clubs locally are well into their mid-30's.
>>The presence of teenagers has all but evaporated.

>Why do you think that is?

Weeelll, since you asked...

One important feeder for amateur radio, especially those with strong technical and operating skills, and who will persist in it well into adulthood, is college radio clubs. Another is the military.

The ARRL, at least during the timeframe that I was involved in college club leadership (mid to late 1980's), seemed to focus its youth programs at too young an age to make a significant difference. A lot of focus was on getting elementary school-age hams to qualify for Novice tickets, despite the evidence that very few of them were going to stay with us long-term. Individual Field Organization officials were supportive of us (most notably W3ABC and the county EC, whose WB3 call I now can't remember). However, the ARRL as a whole seemed rather indifferent to college clubs, and not very helpful in providing publicity support in the form of PSA's, pamphlets, etc. Their materials seemed to either be aimed at children (Archie comics) or retirees (pursue a hobby with your copious money and spare time!). When I discussed this with one of our late-1970's alumni, who worked at the League for a while after graduation, he agreed, stating that he wanted to update the materials, but was overruled by higher-ups who wanted to persist with traditional styles of recruitment.

League indifference was one issue. Perhaps they expected that we could fend for ourselves. University indifference was another. EE students found faculty either ignorant ("I didn't know there was a ham club on campus") or hostile (One of our members raised his hand in a lecture, in response to the professor asking if anyone was a ham, because the topic of the lecture was SWR, and hams would have a good understanding of it. Later discussion with the professor by that member indicated that he disliked hams in general.) Efforts by some of our MSEE student members

to set up an analog RF design class (intended for upper-class undergraduates who have already taken the introductory electronics, electromagnetics, and modulation methods courses) were stymied by the fact that the only faculty member who was interested in teaching such a class was now retired. He might be able to teach such a course once, but it would not be a well-integrated, and long-term, part of the curriculum.

All of this was unfortunate, because word back from some of our EE graduates who went on to RF engineering careers (one working on microwave measurements at a government laboratory in Maryland, the other working for a certain communications and avionics systems manufacturer in Iowa) was that they found the BSEE curriculum oriented more towards sorting and filtering of students than with actually educating those students and imparting useful information. The oversized curriculum was intended to cover state professional licensing exams and provide a "grand tour" of topics to allow future graduate students to make an informed choice when they later specialized. Both said that they would have been at a significant professional disadvantage if they had not had the hands-on background in RF that amateur radio offered them. Their advice? Sure, pursue the degree, as that is the only way to get into a professional engineering career these days. Just don't expect it to be a climb-the-mountain-and-see-God experience. Take advantage of as many opportunities as you can to get hands-on experience, including co-ops and technical hobbies like amateur radio, because the curriculum alone will not even come close to providing it.

It also saddens me to see a fine, mostly self-supporting, radio club like W3ADO at the U.S. Naval Academy have to defend itself against closure. It was even necessary to (politely) correct command's perceptions, which was something like, "Amateur radio, is that still around?" Though many midshipmen will graduate with engineering degrees, very few officers will serve as professional engineers in the Navy. Rather, they will draw on that expertise to command ships full of highly-qualified technicians working on many advanced technological systems. The radio club, with its well-equipped station and numerous successful projects (enumerated in my letter linked below), offers one of the few opportunities for such officers to gain hands-on experience in RF engineering before joining the fleet, and thus be able to better command that which they better understand.

A letter-writing campaign, in which I participated:

http://sacmarc.novia.net/hypermail/att-0220/01-w3ado.txt

helped save the club, for now. I would like to thank fellow newsgroup participant Larry Roll, K3LT, for joining me in this campaign. However indifferent the League may have been to college clubs in the past, they also wrote in defense of W3ADO.

>>
>>What types of realistic homebrewing are you advocating for "NewNovice"

>>hams beyond 3-transistor OOK transmitters and single-conversion
>>receivers? Please be specific.

>What's wrong with those sorts of rigs for a start? There are also
>lots of good kits out there. And note that the "NewNovice" allows a wide
>variety of modes.

Actually using a CW rig requires at least some proficiency in Morse code. Not only are entry-level hams eschewing that, but so are most experienced hams, if trends and surveys are any indication. Furthermore, the ARRL-proposed NewNovice does not require a Morse code test. Such a CW rig could be built, but would it be used? Even if it is just a base project for learning purposes that would later be extended, what kind of homebrewing agenda, and timeline, would you advocate to get to something that would be practically usable in modes other than CW?

>>What aspects of current communications
>>technology, something that would be used and would not be a trophy or
>>shop-project to be put on a shelf, can be realistically homebrewed via
>>commercially-available (and presently-manufactured) parts by high-school
>>age hams?

>Lots of CW rigs, for a start. I built my first station from junk at age 13.

I left the door wide open for you to suggest lots of other kinds of homebrewing, but you went right back to CW rigs, using examples of what you built over 35 years ago. I can think of a few others that I think entry-level hams should attempt in the present day. For example:

High school students should be able to homebrew:

- Patch cables, control harnesses, and connection terminations from bulk wire and connectors

- Antennas and feed systems, again from bulk materials

- IC-based timer and microcontroller circuits from commonly-available electronic parts

Implicit in the above is learning to make the correct choice of components, both parts and bulk materials, appropriate for the desired performance, specifications, and overall design. These types of projects would be a good opportunity to learn how to use a multimeter and an oscilloscope. Mechanical and fabrication skills, including soldering, would also be developed.

For college students:

- Software-based radios (ever heard of GnuRadio)?

I put this one in the college-age category, because being able to design and implement software-based radios would be helped by sufficient knowledge of Digital Signal Processing (DSP) theory, and much of that

(at least the derivations and proofs) is based on calculus and
differential equations. Proper computer programming education would
occur at this time, also.

>Do you think homebrewing is no longer practical? How about kits? Are
>we to be nothing but appliance operators?

No, I think that homebrewing is practical, I just disagree with what
kinds of homebrewing are desirable. I read your comments in FCC Docket
WT 98-143, did you read mine? They are available in the ECFS. I do
address this issue there.

Kits are now enjoying increased popularity even without changes to
amateur radio licensing, though they no longer have the cost advantage
over commercially-built gear that they did when Heathkit was in its
heyday.

>>When you argue for "NewNovice" privileges, are you supporting it with 5
>>WPM code, or without?

>I support a code test for *all* ham licenses. That probably won't happen, of
>course.
>But it's a good idea.

One simple, nearly status-quo, outcome that the FCC might pursue in
response to the deletion of S25.5 is to drop the 5 WPM code requirement
by eliminating Element 1. If so, then the Tech/Tech-Plus distinction
goes away, and the Novice/Tech HF privileges would be usable by
operators from the numerous ranks of Technician. That might also be
considered a "good idea."

>>What if almost no one wants to sign up for 5 WPM
>>code as an entry-level requirement?

>The ARRL proposal talks about how great the old Novice was in its heyday. 5 wpm
>didn't stop hundreds of thousands of hams then - why should it do so now, when
>we have more and better training methods?

Because we are long past the Novice's heyday, and few want to sign up
for Novice today. Prospective amateurs "vote with their feet" in
seeking out the Technician class license as an entry-level license. One
plausible reason for this is the CW test, as even you alluded to above.
Maintain the CW test, and you continue to funnel amateurs away from
Novice and HF. As noted above, a simpler test is not a panacea, because
people are willing to take a harder test to get more desirable
privileges. Again, what is the necessary ingredient that is missing?
We already have "more and better training methods", we have a pool of
applicants that are willing to take a harder test to get more desirable
privileges, and we even have lots of potential homebrew projects to make
simple CW transmitters and receivers. Why do few people want to sign up
for that nowadays?

Even under the ARRL proposal, the proposed NewNovice license does not impart enough knowledge, nor does it grant enough privileges, to be suitably attractive to make it a viable entry-level license, in my opinion. Especially if it has to be justified strongly enough either to exist as a fourth open class of license, or introduce more free upgrades (such as from Tech/Tech-Plus to General) to keep the number of open classes limited to three.

>The fact is that it's not the code test or the written test or the number of
>license classes
>which is/are the problem. It's things like lack of publicity, antenna
>restrictions, and
>competition from other activities.

All of the above are challenges for amateur radio, but which of the above do we have the most control over, and thus the greatest ability to solve? How would you propose to solve each of them?

I notice you making the "lack of publicity" argument in this newsgroup since at least 2000, and discussing some specifics in later postings. Obviously you and I don't have the budget and manpower to do national campaigns. Only the ARRL is big enough to do that. Have you talked to ARRL officials about this? What are their answers? Even if the ARRL is unmoveable on this issue, we can still make a difference locally. What have you done locally in the past four years to better publicize amateur radio? How did it work out?

I don't have a lot of time to talk, but simply couldn't ignore this subject. Have you ever heard the phrase, "slinging sh*t?" It's fairly popular with some teenagers today. Anyway, I was flipping through the channels the other day and happened upon the "Soul Train" television show. There was a male singer on stage going through the motions of doing exactly that. As he was singing, he would wipe his hand up the crack of his butt and then flick his hand in the direction of the cheering audience.

He did this several times (six or seven, at least). If he had not repeated it, I wouldn't have believed what I first saw. I have no idea who the singer was, and only stayed on the channel long enough after that to learn the program name, but this has to be an example of entertainment reaching a new low.

Michael Jackson repeatedly grabbing his crotch in front of audiences often filled with young children was the previous low point, in my opinion (especially considering the recent allegations and his admission of sleeping with children).

No. The CCITT.

>Founded on 17 May 1865, according to their history page. Just a
>couple of weeks after the Civil War ended!

The American Civil War, that is. :-)

Actually, the old National Bureau of Standards (now a part of NIST)
started up then with the first international conference in Yurp on
weights and measures and the like. That's in the history of NBS
in "Measures for Progress" published by the US Government Printing
Office nearly three decades ago, authored for the NBS.

The CCITT was mainly concerned with international interfacing of
telegrams. Commercial landline telegraphy was then 23 years old
in the USA and spreading rapidly worldwide.

Not only that, it is "radio history" somewhat filtered by the ARRL to
emphasize their "importance" even though they were a late-comer
among USA amateur radio organizations. Sigh.

For a more balanced view of early radio history, mostly in the USA,
see the "White Pages" (as I call this collection by Thomas H. White) at -

http://earlyradiohistory.us/index.html

There are 24 principal sections there, #23 having early radio regulation.
Section #12 covers "pioneering hams." In section #12 one can find out
that the Radio League of America and the United American Relay Club
were there before the ARRL. The very first USA radio club was RCA,
the Radio Club of America founded in 1909, five years before the ARRL.

Section #12 will also recount a couple of trans-continental amateur
relay failures which probably aren't in the "official" history book titled
"200 Meters and Down." :-)

The ARRL petition is not "making things right".

It will continue the Extra code exam that Commission stated
"serves no regulatory purpose"; and, in my opinion, is not
in conformity with 5 USC 706.

The ARRL petition will waive valid writtem exams for
a special group of incumbenent licesees, who did not ask
to be upgraded.

It appears to me that ARRL is giving away free upgrades in return
for support the Extra code exam.

If the Commission wants to "make things right", they should have
issued a MO&O in December to delete 47 CFR 97.503(a).

Do you always take history as fact?

FWIW, I have read that the US amateurs and their representatives were pretty much the driving force in Amateur radio post WW1. The numbers of Amateurs in the US was roughly equal to the Amateurs in the rest of the world. These numbers coupled with a few organizations that represented them from one country instead of spread out over the globe, would naturally have a major influence on the hobby/avocation.

Now I don't know that for sure, since I wasn't around then, but it seems sensible and logical enough, so I assign it a good probability.

>number of US Amateurs.

Sounds about right. (Japan has 1,000,000 hams? That explains the
number of Japanese amateur products out there - they built their own
user base for 'em!).

However, voting rights in the ITU, CCITT or other global entities
aren't weighted entirely upon the number of licensees or service users
that each country has. If they were, the US could control the ITU like
a corporation - claim a 51% user share and set global amateur policy
on their own votes alone. Fortunately, it doesn't work that way :)

Agreed that the US is obviously a major player - but I'm sure that
even if they had gone their own way, the rest of the world would not
necessarily follow. The role of agencies like the ITU is to
coordinate global resources so as to prevent chaos on the bands - not
to act as an agent of US policy.

Looks to me like he satisfied whatever complaints were filed against him and that in the short term renewal period no other complaints were filed against him thereby allowing his renewal. Apparently he behaved as asked and was allowed to renew. All of that is writen in the FCC Enforcement releases, nothing is hidden or corrupt.

>than is and was prevalent in a lot of countries.

I wonder if that is true - the FCC does not appear to have a history
of implementing what the ARRL requests, for example - and they
represent many thousands of amateurs. Sure, comments and suggestions
are encouraged - but it is not a true democratic process - the FCC is
under no obligation whatsoever to implement the will of the majority.
Plus, the comment and review procedure is massive - thousands of
individual public comments and proposals to go through, another round
of proposals and responses, then review, and on and on - a juggernaut
of a process that may well take years to run its course.

Here, Industry Canada asked our national radio association (RAC) to
gather data on what Canadian amateurs wanted to do with licensing
requirements if the Morse requirement was dropped at WRC-03. The RAC
set up a web page with a questionnaire on it, and opened it up to all
licenced Canadian amateurs (not just RAC members). The results were
collected and tabulated, recommendations prepared, and forwarded to IC
for their consideration. As licensing changes within the Amateur
service do not have an impact on either the general public or
commercial interests, this approach makes sense.

Now there is a system that amateurs have direct influence over!

Also, look at how quickly amateurs in Great Britain, Australia, Germany and many others were able to have the Morse requirement dropped following WRC-03. No red tape, no seemingly endless discussion - just done. Many did this in direct response to the request of their own national radio clubs to do so if permitted post-WRC-03. Now there is real democracy in action!

But Dee, other governments re-opened the amateur bands after WW1 without the assistance of the ARRL - in many foreign countries. I'm neither praising nor slamming the ARRL - just stating that their achievement was a local, not a global, one. Canadian hams were back on the air months before the ARRL's victory in the US - I'm sure that others were as well in various places around the world. Seems natural enough - activities were suspended due to the conflict, and reinstated after the hostilities ended. Not everyone's military tried to keep the bands indefinitely for their own private use!

I don't see why not - the ITU voting structure isn't that heavily weighted based on the size of the US - otherwise, they would be in business strictly to globalize US policy. Or, countries like China could assert that as they have 4 times the population of the US, they should control 4 times as many votes. Countries like Japan could claim that they have 3 times the number of licenced Amateurs, and monopolize the process. If that were the case, how many countries would have remained members of the ITU? None, I'd say.

> Do you always take history as fact?

Not always, Mike. Depends on whether the source of the historical
information quotes verifiable references or not. Otherwise, it's just
the opinion of the writer.

I never take hearsay as fact, however.

The fact is, other countries were back on the air well before the ARRL
was successful in restoring amateur privileges in the US. Neither the
US nor the ARRL was responsible for the restoration of amateur
privileges in other sovereign nations.

Perhaps the ARRL overstated its importance in the lobbying for the
return of Amateur privileges as well - in recent history, the FCC does
not always follow their suggestions (incentive licensing comes to
mind, for one). Maybe the Government would have told the military to
back off and get out of the radio monopolization business? If the

military had been successful, there would have been no commercial
radio either - just military.

But hey, if you're lobbying for something and it ends up going your
way, then you get to claim that you made it happen, right! Even if it
would have happened anyway - who's to disagree? :)

If the international unions were structured like corporations, that
would be true. The US would have a majority share, and could
implement anything that they wanted based upon the number of
'shareholders' (amateurs, in this case) that they represented.

In reality, it's not structured like that at all. Otherwise, how would
comparitively small countries like Albania or Turkey have any chance
of having their national interests recognized?

>
>Now I don't know that for sure, since I wasn't around then, but it seems
>sensible and logical enough, so I assign it a good probability.

Perhaps they were a driving force - but if they hadn't been (i.e. if
the US military had successfully locked them out after WW1), why on
Earth would the rest of the planet have abandoned amateur radio? It
might have been different, and ther might have been contention between
US military traffic and the rest of the world - but I really don't
believe for a second that the US influence over the amateur policies
of the rest of the world was ever that strong. Not then - and not
today.

Historically speaking.

Hello, Dee and the group,

at the ITU, each country has only ONE vote, see the post about albania and san marino etc.

And about the strength of the national radio clubs like your ARRL, or the RAC, DARC: ARRL is holding abt 25% of the hams, in Europe the average member number of the club is over 60% of all hams in this country. But I agree, lobbying the government is a game they know how to play in the US.

Mike, how is it anti-US to point that the world doesn't revolve around
America? Of course, if you think it does, then you're probably beyond help.

It's a troll, Alun. Go post the same message anywhere on netnews and
watch the reaction.

If you don't believe it, then you're probably beyond help.

Of course the world doesn't revolve around the US. The world revolves
around it's axis.

How is the ARRL proposal going to affect the rest of the world's
amateurs anyway?

Mike, I didn't take Alun's message as a troll - just a response in
context to the thread to a rather lofty assertion that without the
ARRL (and by definition, the US Amateur Radio Service, since that is
all the ARRL influences), the world would never have known the joys of
Amateur Radio.

Which is just a tad jingoistic, I'd say - and nigh-on impossible to
substantiate without resorting to theory, opinion and conjecture.

It won't.

Yet, according to the comments earlier in the thread, historically,
without the ARRL there would be no amateur radio anywhere in the
world.

Really? I don't think so.

I have to confess ignorance as to exactly when the hams got back on the air in the UK after WW1.

I do know something about the 1927 conference, though. I think that this may be the source of the theory that America saved ham radio, but like most things it's not that simple.

Many of the delegates, including the UK, did not want to recognise ham radio as a service in the international regulations. What you have to understand, though, is that they did have amateur radio in these countries, and that it would have continued much the same without ITU recognition. The war was long over by then, and they had all let everyone get back on the air already, long before the conference. This point is noticeably absent from the postings advancing the 'America saved the world' theory.

The US proposal was carried, and what it did was to get recognition of the amateur service in return for the code test. This was no loss to American hams, who already had to pass a code test anyway. However, many (most?) of the other countries had no code test before 1927. The UK certainly did not. It's quite possible that many delegates may have opposed the US proposal less because they didn't want to recognise hams, but more because they didn't want a code test! I don't know. The UK clearly had no objection to amateur radio continuing in being, but just didnt consider it to be a service (many people still dispute that point today).

If the American proposal hadn't been carried in 1927, it is quite clear that amateur radio would not have dissappeared. Without ITU recognition of amateur radio, it is true that there would have been much more variation in allocations between countries, although there is still quite a bit anyway. I understand that Australia had entirely different HF bands to everyone else at that time, and that might have continued for a while longer at least.

So, there is a grain of truth in that it was the US that put forward the proposal that got amateur radio recognised, but it had nothing to do with numbers, as they had only one vote, just as they do today.

Unrecognised services exist without needing any permission from the ITU. Just look at CB. Yes, I know you'd rather not(!), but it exists in a large number of countries without any ITU recognition, many of them even using the same channels. Of course, it is a good thing that amateur radio is not in this position, but you all know what I'm coming to next.

The price we paid. The @#%#&$& code test! You can all say your piece about whether there should be a code test or not, but there's one thing that none of you can honestly deny. The existence of the ITU code test requirement caused more ill feeling than anything else in the hobby. I did put that in the past tense because it has gone, and the past is the only place it belongs.

If there are no renewals, how does IC know when a ham dies? Or is the
situation like Japan, where the license is only cancelled if someone makes
the effort to tell the govt. (with proper documentation) that the ham in
question
is, indeed, dead, and to cancel the license?

Actually the ARRL has a pretty good track record on that account. PRB-1, and RF
exposure, to name just two.

>Sure, comments and suggestions
>are encouraged - but it is not a true democratic process - the FCC is
>under no obligation whatsoever to implement the will of the majority.

As was made clear in the 2000 restructuring.

>Plus, the comment and review procedure is massive - thousands of

>of proposals and responses, then review, and on and on - a juggernaut
>of a process that may well take years to run its course.

It's not really that bad. The various proposals will be allowed to run their
course, comments categorized by a few characteristics, and then the FCC takes

what
it thinks are the best features and makes an NPRM.
>
>Here, Industry Canada asked our national radio association (RAC) to

Which may or may not be a fair process. For example, what protection was there to avoid multiple "votes" by the same person? What provision for those who do not have internet access?

>As licensing changes within the Amateur
>service do not have an impact on either the general public or
>commercial interests, this approach makes sense.

Some would dispute that! For example, if amateur radio were to wither away, at least some of the frequencies could be reallocated to other services. If amateur numbers grow like mad, there could be pressure to expand amateur allocations.

There's also the effect that the loss of amateur public service on the general public.

btw, there's a new book out called "10 Days In Utah: The Search For Elizabeth Smart" which documents the use of ARES (Amateur Radio Emergency Service) help in providing communications for the search for kidnapped Elizabeth Smart.
>
>Now there is a system that amateurs have direct influence over!

What about the input from nonhams? Or is commentary limited to those already licensed?
>
>Also, look at how quickly amateurs in Great Britain, Australia,
>Germany and many others were able to have the Morse requirement
>dropped following WRC-03. No red tape, no seemingly endless
>discussion - just done.

A number of reasons:

1) Much smaller amateur populations
2) Much more homogenous (sp?) populations and culture
3) Ground work prepared far ahead of WRC-03 so there was little doubt of the outcome if/when the treaty changed
4) Much higher percentage of hams belonging to national organization.(in many countries, it is practically or legally a requirement to be a member)
5) Complete disregard of dissenting opinions.

>Many did this in direct response to the
>request of their own national radio clubs to do so if permitted

>post-WRC-03. Now there is real democracy in action!

Only if it can be shown that what the national radio clubs want was really
a majority opinion! I recall reading that a survey of German hams showed
that a majority wanted the code test to stay - but they were overruled.

And the number of countries who have made this change is only a small
percentage.

If the ARRL can be faulted for anything in this restructure thingie, it's that
they did not have a proposal ready to go in mid-July of 2003. Everyone knew
that Wrc-03 was going to happen, and that the chances were very very good that
S25.5 would change. So where were the surveys, discussions and proposals before
WRC-03?

>>could have formed (and probably would have) and done the same as the >>ARRL.

I disagree. One of the key factors was that the pre-war ARRL directors put up
money to restart the League, lobby in Washington, restart QST and ask the old
membership for help. It was because they had a base of operations already
established that they were able to get going again quickly.

For a modern-day example, look at the BPL situation. Does anyone think that
unpaid volunteers working in their spare time could do the work of W1RFI and
others in making observations, gathering data, preparing serious engineering
commentary, coordinating with other services, and all the other things needed
to fight the "professionals" who want BPL?

What other group of hams could do what ARRL has done in the BPL area?

>>But you know what, we would then be having this same discussion of "ZZZZ"

>>"ZZZZ." The rest of us would then be defending "ZZZZ". Same game,
>>different names.
>
>But Dee, other governments re-opened the amateur bands after WW1
>without the assistance of the ARRL - in many foreign countries.

How many?

Remember too that there were no "amateur bands" in those days. Amateurs were simply assigned wavelengths shorter than 200 meters at the whim of the governments.

Note also that amateur radio did not exist as a separate radio service, but rather as part of "experimental and educational" stations. IOW, stations that could not be classed as marine, military, government, or commercial.

And although other govts. may have allowed their hams back on the air, when it came time to have international conferences (1924, 1925, 1927), many of those same countries proposed rules that were so restrictive as to essentially eliminate amateur radio.

>I'm

And ARRL historians and supporters. For example, did you know that a
Morse Code exam now acts as a disincentive to CW use on HF? But only
now. It wasn't always so.

I know, I know. We've had that very same disincentive since 1912, and
they fought their hardened little hearts out to preserve it. And we
fought to remove it - the Morse Code Exam, not their hardened little
hearts. But now somehow its a disincentive to CW use.

"We've got a bleeder!"

TAFKA Rev. Jim must be in catharsis.

Can we water it down any more?

> 5 wpm code test retained for Extra only

Why not just elminate the code requirement entirely. To me 5WPM code
is so awfully slow that it's painful.

> Existing Advanceds get free upgrade to Extra, Techs
> and Tech Pluses get free upgrade to General

This free ride stuff has got to stop. I'm a 20WPM Extra damn it - now
I can bitch and moan like the old farts. My friend KH6HZ is probably
getting a good laugh out of this.

> Novice test to be 25 questions on "basics", General to be
> derived from Tech and General, Extra pretty much as-is.

I suppose I can't complain much on this. Most of us are pretty much
appliance operators - when is the last time you played around with
SMT inside your radio?

That's precisely why I didn't let Dave, Dick, Bruce, Steve, Larrah,
TAFKA Rev. Jim, the other Steve, and Ed run be off.

> It makes the regular natives restless and they might take up
> their spears and fight against Abrams tanks...

That's how one of their weaker minds ends up declaring that a Morse
Code Exam is a disincentive to CW use on HF.

I know, I know, they've finally realized that they're a ragtag bunch
of Neanderthals throwing spears at Abrams tanks...

Or have they?

Feel free to believe what you want to believe.

The entire four-decade period up to about 1930 was one of great
change, reorganization, new technology discovery, etc. in "radio."
Something involving communications at the speed of light and
without wires was suddenly created after 1895. NO ONE had a
real coherent, expert prognostication of the future of "radio" in the
early days, those first four decades. Everyone involved with this
new thing was groping in the dark, experimenting, entrepreneurs
seeing potential profit, tinkerers busy with a fascinating new
technological interest.

As to communications by 1895, there was already the beginnings
of international cooperation in wired commercial telegraphy

standards and practices, that made firm over two decades prior to that turning-point year. [Marconi's experiments started in 1895 but were witnessed by only one other person...a full demonstration was not done until the following year] This whole last decade of the 1800s involved a lot more international discussion of other things besides mysterious "radio."

As with any technological breakthrough showing potential monetary profit, lawyers and courts began to get busy on patent disputes which continued on into the 1930s; one of the things affecting Ed Armstrong's personal life and subsequent depression was a constant coming and going to courts for patent suits that lasted over a decade. The newly-formed Marconi Company in England was proceding at a fast pace to attempt international control of as many patents in "radio" as possible. International political relations were a fighting ground, made worse by the armed conflict of World War One. Lots and lots and lots of folks in the commercial and government fields were fighting it out to control "radio" in all manner, shape, and use. With the advent of the first active control valve for electrons, the triode vacuum tube promising miraculous applications for other than radio, the fighting got worse.

The beginnings of the RCA Corporation (originally Radio Corporation of America) was due to an effort to keep "foreign" monopolization of "radio" technology out (i.e., England was as "foreign" as anybody to American businessmen and government men). The main cause was the mechatronics of radio (on the way to obsolescence then) to be replaced by electronics, the "foreigners" trying to hold control of the mechanical side of radio away from US.

The beginnings of broadcasting was in the 1920s with enormous potential profit for business. There was NO regulation of radio in the USA until 1912 and everyone plopped down on whatever "frequency" they were comfortable at (or that primitive technology of that time allowed). RF-wise, the spectrum was chaos. With the first regulation of the EM spectrum came the restricted-to-broadcasters broadcast band at the low half of the MF band. Tinkerers such as amateurs were shoved off to a relatively unknown region of "short waves," largely unexplored territory at wavelengths shorter than 200 meters. Broadcasters needed fixed frequencies for thousands, then millions of listeners, listeners having still-primitive technology receivers. Broadcasting had the potential for enormous control over public opinion, especially for the thought-control processes known as "advertising" (already begun in printed media).

Wired telegraphy didn't just disappear but it was in a steady decline from the previous turn of the century. The cause was the teleprinter displacing the telegraphers reading paper tapes. "Stock tickers" with their pretty glass domes were appearing on executives' desks able to tell those executives quickly how stock values were going. Telegrams were delivered with nice printed strips of text glued onto message forms, no longer scribbled with handwriting or that new

writing machine called a "typewriter." Teleprinters did the text printing. Teleprinting didn't need morse code specialists at wired communications circuits. Even as the commercial morse comm carriers were peaking at their busiest time, the teleprinters were edging them out, first at a small scale then on and on in a juggernaut of displacement of old, manual wired comm technology.

The maritime world got a bonanza, a miracle in "radio" able to reach over the visible horizon. It was something they never had before. Maritimers could get by on LF with relatively slow pace of water travel. The maritime world was the first big user of "radio" and the radio operators got their nickname of "Sparkies" from using that high-tech transmitter known as "spark." Arc, spark, and alternator "transmitters" reached a peak of 1 MegaWatt on LF...but eventually would have to go since they transmitted simultaneously on MF and on up into HF (mostly without realizing it). While "radio" was not a popular topic of conversation at the ordinary dining table then, many were involved in its use and millions of dollars involved in equipment contracts. "Radio" was already big business by the start of 1920.

Displaced morsemen, downsized from landline wire comms by the teleprinter and telephone, took to radio. Early radio could only communicate by simple on-off keying of primitive RF generators. Landline telegraphy was on-off keying of a battery source. Landline telegraphers need only learn how to twist radio knobs, throw radio switches to use their morse skills. They "upgraded" to high-tech of the times...and invented all sorts of mythology about their new craft using old skills. That mythology persists in some minds today. The print media ate all the mythology up and printed glorious tales of "pioneering in technology" in the exaggerated prose of earlier times around the previous turn of the century. Journalism it was not, storytelling it was.

>Now I don't know that for sure, since I wasn't around then, but it seems
>sensible and logical enough, so I assign it a good probability.

If the only source of information comes from one source, a special interest group, you should be aware that some things ar (deliberately) left out in order to improve the status of the particular special interest group. You will be hard-pressed to find objective history of the radio amateur organizations that existed before the formation of the ARRL from ARRL publications. Such history does exist in 90-year-old archives of other print media, of government records, of patent papers.

Special interest groups must be self-serving for survival. ARRL is a special interest group. For a more objective view of early radio history, Thomas H. White has done a superb job of presenting a part of that overall history in the USA. See it beginning at -

http://earlyradiohistory.us/index.html

No special interests involved other than showing a more complete picture of early USA radio history, of ALL radio, not just amateurism. Fascinating stuff to see all the chaos, change, triumphs and tragedies in the first few decades of a more-than-fascinating technology.

Or, you can be content with being spoon-fed "history" from a single source who controls what they want you to hear. Your choice.

Three ways:

- the family notifies IC that their beloved ham relative is no longer
a user of oxygen.

- someone notifies IC of the passing of the amateur because they want
his or her old call. This method is most popular with the coveted
two-letter suffix ones....

- according to the regs, the license automatically expires on the
125th birthday of the holder.

>to avoid multiple "votes" by the same person? What provision for those who do
>not have internet access?

One vote was allowed per callsign. No internet access, no vote, I
guess - there was no other cost-effective mechanism for the RAC to use
to poll all of the licensees. Statistically, though, if the sample
group is large and diverse enough, the results should be accurate.

I could speculate here that the amateurs with no Internet access may
well be those most in favour of retaining Morse testing, but I won't
:)

How many of its members did the ARRL poll for their opinions before
they released their proposal to the FCC?

>public.

I was of course speaking of the dropping of Morse and potential
restructuring of levels and test requirements. These issues would not
affect anyone outside the hobby.

As above, the post-WRC 03 changes would affect only those currently
engaged in the hobby - I believe that no non-ham input has been
requested at this time.

>>

>5) Complete disregard of dissenting opinions.

Or a bit of all of these things. Neverless, they did it - and pretty
quickly too! Without the administrative nightmare that the FCC is in
the middle of. I shudder to think what the review and processing of
the thousands of documents regarding the restructuring of amateur
radio will cost the taxpayer.....

>
>>Many did this in direct response to the

>that a majority wanted the code test to stay - but they were overruled.

Well, if the local administration sets their rules up to match the ITU
standards, then a change in these would result in a change in local
standards. It ain't necessarily a democratic process - they weren't
removing rights to operate from anyone, simply dropping a testing
requirement.

>
>And the number of countries who have made this change is only a small
>percentage.

I don't see the correlation to numbers here, Jim - these are entire
countries that are changing their own regulations. As time passes
more and more are getting it done. Just today, Denmark joined the
club!

>
>If the ARRL can be faulted for anything in this restructure thingie, it's that

>WRC-03?

Good point.

There is a second and very major fault though - did the proposal for
restructuring that the ARRL recently submitted to the FCC come from
the members, or the ARRL BoD?

>>

>
>What other group of hams could do what ARRL has done in the BPL area?

Good point - that is definitely a worthwile project. But the ARRL is
not involved in the research on BPL that is in progress up here....for
one.

In the US example, I'd suggest that if BPL is killed off it will
likely be due to the objections of the broadcast interests, the
Military and the various emergency management and security divisions
within the US government who claim that HF band interference would be
a problem for homeland security or emergency management. Whether or
not BPL messes up a hobby group's activities would come in at a much
lower level of priority, I'd think.

Not necessarily fact, but that is what I've gathered so far.

Do you know how all Americans think or feel about whatever issues? I wouldn't presume to assume what "every Canadian thinks"

When I've been in Canada, I've met lots of nice folk with lots of differing opinions - Just like us. My boy went to Hockey school there every summer, and we often tagged along for vacation.

BTW, speaking of mistaken impressions, every time we went there, the darn temperature was in the 90's. Canada is sure one HOT country!! 8^)

If your strongest player is sitting on the sidelines or playing for the
other team (i.e. government & commercial interests in the case of ham
radio), it's still possible to win the game but it is much harder.

We are not saying that the ARRL was the only thing that made this happen. Simply that they were a significant player in the US and that the US was a significant player in the world. Without the ARRL, US amateurs would have had a much tougher time. If the US amateur community had been seriously weakened, it would have affect to some degree the amateur community in the rest of the world.

Two xtal and one tunable oscillator in that heterodyne scheme.

Upwards drift in the het osc will make the operating freq go higher
Upwards drift in the LMO will make the operating freq go lower
Upwards drift in the BFO will make the operating freq go lower

So there's a bit of compensation *if* the oscillators all drift the same way.

Where, Alun? Can you show where ARRL claims credit for the Tech losing its code test?

>when the
>truth is the FCC would have introduced one 20 years earlier but for the
>league's opposition!

Not true!

The Tech lost its code test in early 1991. 20 years earlier was 1971. The first FCC attempt at a nocodetest amateur license was in 1975, and if enacted would have not taken effect sooner than 1976. That's 15 years, not 20.

And in 1975, ARRL polled its entire membership with a detailed questionnaire. A large and pervasive majority opposed a nocodetest ham license of any kind.

So it's not true because it was only 15 years not 20? That's only a matter
of degree, not substance.

So you admit they opposed it for 15 years, and I can assure you they tried
to claim credit when it happened.

Exactly, the ARRL opposed it.

2516. Re: KE4TEW, Riley's buddy

He missed his re-test and had his call revoked. He never took the
retest, and Riley still gave him his ticket back. He is the only one to
acheive this feat. Let me quote what you either failed to read or did
not understand:

First:

TAMPA, FL [UPDATE]: The FCC notified James W. Dale, formerly KE4TEW, on
August 3, 1999, canceling his General Amateur Radio license. The FCC had
notified Dale on June 18, 1999, requiring him to retake his Amateur
Radio examinations prior to July 30, 1999, under the supervision of FCC
personnel in Tampa, Florida. According to FCC Attorney Riley
Hollingsworth, K4ZDH, Dale failed to appear for reexamination, and his
license was consequently cancelled. Hollingsworth also warned Dale about
continued operation of radio transmitting equipment.

Then the 180 degree switch:
TAMPA, FL [UPDATE]: The FCC notified General licensee James W. Dale,
KE4TEW, on September 28, 1999, that it was reinstating his Amateur Radio
license with a short-term renewal date of September 29, 2000. Dale had
failed to appear for reexamination after being notified by the FCC on
June 18 to retake his Amateur Radio examinations prior to July 30, and
his license was cancelled on August 3, 1999. FCC Legal Adviser for
Enforcement Riley Hollingsworth said the FCC has "since reviewed and
accepted" Dale's detailed response and his explanation for failing to
appear for retesting. Hollingsworth said the FCC was reinstating Dale's
General license "pursuant to our agreement with you," but the FCC letter
did not elaborate.

All stations failing to appear for re-test had their calls cancelled.
Not Dimmy Dale. What was the "Agreement"? The FCC has pending FOIA
requests on this issue, and some Congressional complaints have been made
as well. Soon we will all know about the "Agreement".

Where? Can you cite any references?

1991 is not ancient history yet. I "was there", wrote letters, followed the
issue closely. In 1990, ARRL BoD policy changed from opposition of any form of
nocodetest ham license to support of a VHF/UHF-only limited license. This was
driven by several factors, including member opinion that was divided 50-50 on
that specific issue.

But I recall no claim that the BoD originated the idea.

It's an error of ~33% (1/3 of 15 is 5)

It's an indication that your recollection of the occurrences surrounding the introduction of nocodetest ham licenses in the USA, and the ARRL's role in them, may be somewhat inaccurate.
>
>So you admit they opposed it for 15 years, and I can assure you they tried

And that's a good thing. Too bad they couldn't see their way to doing another such survey or two.

The 1975 survey gave a clear indication of what the membership - almost all of it - really wanted ARRL to do at the time. How can anyone fault them for following the clear mandate of the membership?

2524. KB3EIA proposal

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-12 16:02:56 UTC
From: Mike Coslo <mjc5@psu.edu>
Message-ID: <402BA3B0.10306@psu.edu>
Source record: 87200

No one commented on my proposal that I made earlier in the week. Perhaps because it was hidden away in another thread (which I changed), or perhaps it was stupid beyond belief.

I'll post it again in hopes of some feedback.

A few thoughts first:

There is going to be a change, of that there is no doubt. I still think it is going to take a longer rather than shorter time. I see no reason to change my prediction in the pool.

The present system is not "broken" It doesn't need fixed. It is what it is, and is just one of those things that grew up over the years. When Morse code was ascendant, there was a need for multiple license classes, since Morse is one of those skills that takes time to hone, and it made sense then to have a rank beginner level, and work up from there.

This is the system we have however, and we tinker with it at our own peril. We do not want to remove privileges, nor do we want to increase privileges without any testing. The reduction issue seems to have been proven by the Incentive licensing problem in the 60's, and giving away free upgrades will only serve to anger people in the other direction.

It is a foolish system that angers people on purpose. You don't anger those who are your friends, you anger your enemies.

To have a Morse code test for entry into HF is not going to happen, and to have a Morse code test for Amateur Extra doesn't make sense, given that the Extra is the highest level license, and Morse code was at one time required for the lowest level, Novice. There is a big disconnect there.

I therefore propose a system that is quite like what we have now. Technician, General, and Amateur Extra. Privileges the same.

The two orphan classes, Tech plus and Advanced, will remain where they are, with privileges staying the same.

After the changeover, the new testing regimen will be:

Technician: heavy on RF safety, Light on electronics theory. Some questions related to the VHF and UHF where the tech's will largely operate The technician is considered a preparatory license, and will give a good base of how to get on the air without frying yourself in the process.

General: General test will scale back on the RF safety, and replace it with more theory. Antenna questions and operating procedures. The never

entertaining band edge questions will get a few more questions.

Extra: more in depth treatment of theory. No band edge or safety questions, at this point, if you don't know safety, you've already fried your mind. questions demonstrating knowledge of different modes.

The only controversial part of my proposal is that there would be a 2 year wait between General and Extra. I could be persuaded to drop that pretty easily!

Bands and sub bands:

At this point, the bands will remain the same. Bandplan adjustments will be made. Novice sections will remain, and will be considered a "practice ground" for those who want to learn Morse code. note: this may actually be a way to kick start Morse code use.

So there you have it. Here is a plan that shouldn't p**s anyone off that isn't *already* mad about something, and as far as I can see, it's major disadvantage is that it isn't glamorous or exciting.

Is it the "ideal" plan?* Heck no! But it accomplishes moving past the Morse code issue with a minimum of disruption, and has the side benefit that we know it will work.

Comments?

- Mike KB3EIA -

*My version of the ideal plan in post Morse code era, would be a one class system, with the requirements being somewhere between General and Extra as practiced now.

How is this?

1. Remove ALL names of ALL licences.

2. Call everyone licensed a 'Amateur Radio Operator'.

And make any modes, other than SSB phone require a 'indorsement' to operate.

Simple and end of discussion.

The league and the FCC are going to do what ever they want, all we can do is pay attention and send in your comments when the time comes.

> > bong!

The use of breath power to key a rig goes back at least 32 years that I am aware of. There were patients of mine who used that system to play pinball machines ...for flipper control. I also recall having a QSO a number of years ago with a fellow who used a puff keying system. I haven't read the article yet to see if there was a new "twist"..... also had patients who used the system for scooter control .... tried it once ...took out some woodwork and plaster.

I'm not sure what you mean by "Morse code was ascendant" - can you explain a bit more?

I would say that *any* knowledge or skill requires time to develop, whether it's theory knowledge,
practical radio knowhow or Morse skills. Thus, there will still be a need for several license classes.
I think there should be more levels than three, but FCC's action in 1999 makes it clear that's
probably a lost cause. So three classes it is:

One that's easy to get so that people can get started without having to learn everything in one go
One that gives full privileges and requires some serious knowledge
One intermediate step so that it's not a huge jump.
>
> This is the system we have however, and we tinker with it at our own

I agree 100%! Indeed, there is still criticism of the IL plan 36 years after it was put
in place, and in many places from people who did not become hams until long after
it was in effect!

> It is a foolish system that angers people on purpose. You don't anger
>those who are your friends, you anger your enemies.

Better yet, you render your enemies ineffective. But most of all you don't anger your

friends unnecessarily.
>
> To have a Morse code test for entry into HF is not going to happen, and

>to have a Morse code test for Amateur Extra doesn't make sense, given
>that the Extra is the highest level license, and Morse code was at one
>time required for the lowest level, Novice. There is a big disconnect there.

I disagree!

Given the popularity of Morse code in amateur radio, it makes no sense to not have it be
a part of the testing for a license. Imagine if there were no questions on SSB in the tests -
would that make sense?

The Morse Code test has been portrayed as the boogieman, as if it is the source of all
of amateur radio's problems. Yet there is no proof of these claims.

>process.

Perhaps, but what that does is to funnel newcomers into VHF/UHF rather than HF. And
since VHF/UHF gear tends to be harder to homebrew and more complex than HF equipment,
it tends to funnel newcomers to manufactured equipment. Also, since there is relatively little
use of Morse Code for casual operating on VHF/UHF, it tends to funnel newcomers to FM
voice operation.
>
> General: General test will scale back on the RF safety, and replace it

>actually be a way to kick start Morse code use.

I don't see the need for that. Better to open up some of the lower part of the
bands for newcomers to use Morse.

The natural tendency is for Morse to be at the bottom of the band, data in the
middle, and 'phone at the top. Rather than fight that trend, the newcomer
segments should reinforce it.

The Novice subbands were originally put in the middle of their bands in a
misguided effort to keep them from straying outside the band edges. Since
Novices were originally required to use crystal control, this made little sense
even in 1951.

I agree that massive changes and giveaways are a bad idea.

However, I think that one of the problems today is that the entry-level license
is too VHF/UHF/voice/applicane operator-centric.
The entry level license should offer a wide selection of bands and modes,
rather than what we have now where newcomers get all of VHF/UHF but no HF.

I'm watching this whole discussion. BTW, the wags at the Retro Computing
Society of Rhode Island actually proposed a TCP/IP over morse code RFP a
while ago.

Bloody slow but it'd be interesting as morse has the necessary states to
shuttle binary data.

If Morse code testing goes, this is a pretty reasonable approach. However several people have proposed even simpler plans. Simply drop the element 1 for the requirements for one or more levels and beef up the writtens. Leave all else alone. Although no one knows what the FCC will do, my opinion is that it will be one of the simplest proposals that will be adopted rather than any restructuring.

>
> *My version of the ideal plan in post Morse code era, would be a one

Except that this is likely to slow the growth of ham radio rather than increase the growth. Although the old incentive licensing scheme was mishandled and many existing amateurs lost privileges, the growth increased markedly as potential applicants saw that they could approach the license in a stepwise fashion. If we were to return to a single license class for the future, as you indicated the testing ought to be stiffer than the General and that could deter people from ever becoming involved.

Newcomers with any gumption can have some HF if they choose to pass the code. Tech study guide and test does include some very basic questions on HF propagation, procedures, rules, etc. Unfortunately too many instructors ignore the HF side of things and don't bother to give much encouragement to go after the code so then the students end up on VHF/UHF only. My instructor, many moons ago, really emphasized going for the "complete" Tech license (Novice written + Tech written + code). I'm glad he did.

Well, I'm not a no-code whiner, Larry. And I've learned Morse.

As I posted before:

>>Here is a plan that shouldn't p**s anyone off
>>that isn't *already* mad about something, and as far as I can see,
>>it's major disadvantage is that it isn't glamorous or exciting.

And you appear to be one of those people that are already pretty angry.
How's that working out for you?

If I had my way, I would not end code testing at all. But it's almost
certain to happen. I'll be happy if it doesn't, but life will go on.

I doubt that many here would agree with your observation, Larry - I
have seen no evidence in this or any of his previous posts of either
whining about Morse or being too lazy to learn it.

OTOH, his posts - without exception, tend to be well thought out,
insightful and presented in a civil and friendly manner....qualities
which are the real definition of useful communications skills.

Your comment above, whether sent by Morse Code, TCP/IP, voice or
carrier pigeon, meets none of these criteria...not a single one.

Perhaps you're right - nothing new here. Yawn.

I can only hope that someone recorded that banquet talk. Of course most
of Shepherd's stuff was that entertaining. That voice we hearing
narrating "A Christmas Story" is his.

He and Jack Fulmer W4HAV (later W4YF) opened a Volkswagen dealership way
too soon after the war. People weren't quite ready for the car. The
place was on the Kentucky shore opposite Cincinnati, where Jean was
working at WLW.

I think there a few still around. There was no one left working from
the old days at the time I went to work for them in 1980. Everything
was Tandy and run from Fort Worth.

A nice bit of nostalgia! Most of the catalog houses had at least some
ham gear. It is interesting to note that famed industrial designer
Raymond Loewy designed the S-40 cabinetry. He is the fellow who brought
us the '47 Studebaker Starlight Coupe and '53 Starliner Coupe, the '61
Avanti,
the S-1 steam locomotive (Pennsylvania RR), that sharp-looking fifties
Coca-Cola dispenser that we'd see in diners and drug stores, and all
sorts of products from pencil sharpeners to refrigerators.

I bought an S-40A from W7LR a few years back. The design is still
stunning.

W4JBP willed me his 1937 Hallicrafters Sky Challenger years back. He
bought it new from Steinberg's appliance store on Vine Street in
Cincinnati. Steinberg's sold ham gear through the end of 1968

K8CFT, who administered my Novice exam, had a Globe King 500-C in his
shack. I've always wanted one but they are bloody expensive these days.

Cass is Hugh Cassidy WA6AUD. His "West Coast DX Bulletin" was tops.
Cass had a flair for writing and brought us the Old Timer living on top
of the hill; the local QRPer, full of questions (often rhetorical) for

the Old Timer; Red-Eyed Louie, always doing the dawn patrol looking for rare DX and the Palos Verdes Sundancers. There are numerous other characters. When Cass retired, his mailing list went to the fellows at Madison Electronics in Texas. Bill Kennamer K5FUV edited their "QRZ DX" for a number of years before going to the DXCC desk in Newington to replace Don Search.

> Then there was the Ham Trader yellow sheets . . I moved a *lotta* gear
> in and out with those.

I subscribed to the "Yellow Sheets" as well and had Alton's "Ham Equipment Buyer's Guide" volumes too.

As with many other things relating to amateur radio, you simply don't know what you are talking about. Yes, W1AW is heard quite nicely on the West Coast and can be heard in any states. Pick an appropriate band and tune it in. W1AW is easily heard in Finland. I've heard numerous W1AW bulletins and code practice runs when I lived in Guinea-Bissau, Sierra Leone, Botswana and Tanzania.

It happens that HPM did go to Washington for the stated purpose. ARRL says that because it is factual. What have you done for amateur radio, Leonard?

Here is the response I received from Alan Shark, president and CEO of the Power Line Communications Association, on my question of the intereference that will be caused by BPL. These guys are simply ignoring any facts because big money is at stake. Other countries have abandoned BPL because of the intereference it causes, yet this guy claims "there is no hard evidence to suport the AWRL (ARRL) concerns." I emailed him back and suggested he go to the ARRL web site and take a look at the videos made that clearly shows the level of interference. I also asked him who these scientists are he refers to and if they had any hard evidence that BPL will not cause interference to the HF spectrum. Think there is some reason for his last name being Shark?

****
I appreciate your concern. To date there is no such hard evidence to support the AWRL concerns. In fact scientists have disputed such claims. Let's see what the NTIA and the FCC come up with by way of real-life field tests. As a veteran who has fought for our country, and who loves this country, I would not support something that would in anyway be harmful to local, state or national security.

The League has quite a large paid staff. In addition to salaries, there
are the expenses of printing and mailing, the need to maintain the HQ
building and W1AW, the costs for utilities, insurance and all sorts of
other necessities. Where does your money go?

You'd be wrong, Mr. "If I need facts, I just make them up".

> > - PRB-1
>
> To help fight the evil, money-grubbing, dictatorial home neighborhood
> organizations?

That isn't what PRB-1 does. It is quite useful in seeing that towns and
cities don't establish regulations which arbitrarily restrict the
installation of antennas and supports.

> > - Fight against BPL
>
> A few OTHER companies and organizations and LOTS of individuals
> have voiced their objection to BPL here, PLC overseas. There's over
> 5000 Comments on NOI 03-104 on the FCC ECFS not from ARRL.

That's a good thing, but you can't have helped noticing that the ARRL
took the lead in matters relating to the threat to HF radio from BPL.

> > - Best ham magazine ever printed (QST)
>

> Hardly. RSGB's "Radio Communication" is an English language
> monthly with a wider scope of amateur radio interests.

RadComm has a wider scope of amateur radio interests? I don't think so.
It also has far less content than QST because it serves a much smaller
membership.

> QST NEVER compared to HAM RADIO magazine during HR's 22
> years of independent monthly publication.

It certainly didn't. Ham Radio catered to one thin slice of hamdom.
QST is a general interest magazine, broader in scope than HR or Radcomm.
QST is still printed. HR is defunct.

> HR was far better, did
> not cater to any BoD stuffiness.

That's pretty easy. No BoD stuffiness. Why? We ain't got no stinkin'
BoD. If you have no membership and if you have a staff of a few people
why would you need a board of directors?

> > - Representation in Washington and internationally, as well as
> >information.
>
> Special Interest Groups abound in DC. All it takes is money to pay
> them for their services representing the BoD's opinion.

Precisely! The trick is in selecting folks who know something about
amateur radio and the ARRL to represent the League. The ARRL has those
people and they do lobby on behalf of the ARRL.

> With the Internet, ALL citizens can now communicate with our
> federal government at the speed of enlightenment. We don't have to
> be filtered through any organization or SIG having its own agenda.

ALL citizens have had access to paper, envelopes and stamps for generations. Citizens have had telephones for decades. Are you so much of a rube that you don't see that lobbyists abound because they are able to accomplish things? If that wasn't true, there wouldn't be any lobbyists.

That doesn't make much sense. The standards and practices of the 1930s have been a ham for 36+ years? The standards and practices of the 1930s are 49 going on 94?

> >> That is how I feel and I just want to voice my personal opinion even

> ARRL has wasted my time, the late Vic Clark included.

How can the ARRL waste your time when 1) you aren't doing anything but posting newsgroup messages 2) aren't a radio amateur and 3) aren't an ARRL member. Maybe you spend much of your spare time (and it is apparent that you have oodles of it) making aluminum foil hats to protect you from those signals which W1AW is beaming your way.

Who said it was?

> Allied is now a division of Hamilton-Avnet and
> MUCH bigger than it was when they had a single building in Chicago.

They've been bigger since about 1970 when Tandy bought 'em. Allied had quite a chain of strip mall and downtown stores across the country. That's precisely why Tandy bought them. Almost all of them became Radio Shack stores.

> I'd been there...impressive showroom to a 15 year old, but not that
> great in 1956 when I was 23.

It takes a lot to impress a suave man-of-the-world such as you.

> Newark Electronics is still in the electronics parts distributor biz,
> also bigger than it was in the 1950s.

Pittsburgh's Cameradio is still in business as CAM/RPC after merging with Cleveland's Radio Parts Company (the RPC). Hughes-Peters is still in business though the company has been sold. None of them were ever solely in the amateur radio business. Hughes-Peters Cincinnati Division had nine hams on staff and always advertised in the GCARA's "Mike and Key". Many of our customers had radio amateurs employed. The company had a busy parts counter and figured that dollars from hams were as good as dollars from anyone else.

> There's lots more places to get parts for hum radios now, but the
> old-style parts of a half century are very, very scarce. :-)

No, Leonard, they aren't. There are simply fewer places selling them. With the stock I have out in the barn, I might run out in another fifty or so years.

Picked this up on the shortwave group. Looks like the 14th might be a good time to fire up on the upper end of 75 and protect our frequencies.

**Saturday februari 14 at 19.00 hours UTC (gmt) the brand new offshore radio station RADIO RAINBOW INTERNATIONAL is expecting to have its first official TEST TRANSMISSION from international waters between the frequency of 3933 - 3937 khz, is 3.933 - 3.937 mhz. in the 76 meter band.
The stations technicians want to have listeners reports from listeners. It will be a live program from the radio ship with acquaintance with ship and crew. They are asking to sent your e mails directly to the ship on this adress; radiorainbow@hotmail.com
Following evenings there will be more test transmissions with nice music programs, in which you can participate by sending a e mail during the programs.
Please sent this mail to the press and all interested people.
The message came from
**********RADIO RAINBOW INTERNATIONAL, THE VOICE OF PEACE**********

Loewy (and others) also made it clear that purely functional objects could look
really cool, too, without significant cost increases. In fact, his style
changes to
the GG-1 (including the use of a welded rather than riveted body and the use of

smoother lines) resulted in *reduced* cost.

Unfortunately he was not available to help style the Southgate Type 7.

Not necessarily!

At 30 wpm, the displayed code requires a sweep time of about 1.2 sec

>Newcomers with any gumption can have some HF if they choose to pass the
>code.

Well, I dunno if I'd call it "gumption". But yes, there's nothing that
prevents
a raw newcomer from getting an HF ham license "right out of the box".

>Tech study guide and test does include some very basic questions on
>HF propagation, procedures, rules, etc. Unfortunately too many instructors
>ignore the HF side of things and don't bother to give much encouragement to
>go after the code so then the students end up on VHF/UHF only. My
>instructor, many moons ago, really emphasized going for the "complete" Tech
>license (Novice written + Tech written + code). I'm glad he did.

Me too!

But even though it *can* be done, the license structure works against it. This
isn't a new thing - way back in the bad old days, one would sometimes hear of a
new ham going straight to General rather than mucking around with Novice. But
those
folks were very rare.
>
If you look at the "new licenses" listings at

http://www.ah0a.org

you'll see that each month a few new hams each month bypass Tech and go for
General or even Extra "right out of the box". But they are only a few, compared
to the thousands who start with Tech.

As you noted in another post, a multistep license is needed because most people
find a stepwise approach more doable and less intimidating than a one-shot
comprehensive exam. So most folks will take the upgrades in steps. The current

system actually pushes newcomers *away* from Morse and HF use by putting those things father away.

The new ham who goes for Tech-with-HF finds that s/he has a mountain of VHF/UHF privileges but only a tiny bit of HF. And while there are some HF questions in the Tech pool, the focus is primarily on VHF/UHF - which it has to be, in order to match the privileges.

IOW, to be blunt, the current license structure tends to make HF and Morse look harder than they are, and to nudge newbies into getting on the local repeaters rather than HF Morse. (Which *appears* easier to most newcomer - buying an HT and taking it "out of the box* or learning Morse, putting up an antenna, assembling an HF station with all the needed stuff and getting on 80/40 CW?)

Can a person even do 30 wpm with one of those? I didn't read the article
yet, but that seems pretty fast.

Agreed - but at a sweep of 1.2 seconds, the phosphor would need to
have a pretty long persistance to make a nice even display like the
one pictured.......bright, too!

My Tek 465 can't do that - where can I buy one of those? :)

The article claims 25 wpm or more from this device. Maintenance isn't
mentioned, though - one shudders to think what that thing would be
like after a couple of weeks of use! Ewwww.

I wonder if TAFKA Rev. Jim was faking it for all of those years that
he demanded a disincentive exam for access to CW on HF?

I hope it doesn't come to that.

Instead, they should cleanse their souls by explaining why they argued
for maintaining the Morse Code Exam for HF access, and now how its a
disincentive to CW use on HF. It just doesn't make sense to me.

Hello Steve and William,

firstly, I have to apologize at Dave, for plagiate his writing style.
<sarcasm> It took me several month of studying this newsgroup to catch the
twist <sarcasm ends>

Actually, thank you, William, this is a great honour for me as a non-native
english speaker/writer, to be compared with such.

Thank you Steve, for taking this effort to look me up at QRZ, and to gathert
all this information about the Deutsche Telekom and their internet services.

To post from this account, you have to be physical resident in Germany to
get one. Deutsche Telekom or T-Online as their ISP is not the only ISP in
Germany, but it is the only telephone service provider.

I have a Question about Dave Heil: Is he the one who ownes the HEIL
Microphone company?

When can we meet on the air waves? Which bands are you on? Any HOTSPOTS you
frequently visit on HF? ow is propagation over there in the US? What time
20m is open across the entire Country? How about on 40m day or night?

Catch ya boys and gals

Agreed! Most proposals I have seen have been either too radical or too
complicated.

At one time, if you were going to be a Ham, you were almost certain to
be using Morse CW as a major part of your Operating activities. There
was a time when the two major alternatives were AM or CW.

In the testing, yes, but I think a Fail Element 1 = no license is simply
a dog that isn't going to hunt.

> The Morse Code test has been portrayed as the boogieman, as if it is the source
> of all of amateur radio's problems. Yet there is no proof of these claims.

It isn't the boogieman! That's just an excuse for lack of effort (the
same thing Larry accuses me of!) We've already seen that some prime
agitators for elimination of Element one are now taking the next step
and supporting a radical easing of the writtens.

Nothing is easy enough. Remember what I said about the direction of the
tide some months back? I haven't seen anything to suggest I was wrong.

>> I therefore propose a system that is quite like what we have now.
>>Technician, General, and Amateur Extra. Privileges the same.

>
>
> This means all Techs have VHF/UHF only?

Yup. And it's a good idea. Gives those that might want to be on HF some
incentive, and they neither gain or lose privileges. Did everyone know
that there are Technicians out there that are perfectly happy with what
they have now?

>> The two orphan classes, Tech plus and Advanced, will remain where they
>>are, with privileges staying the same.
>
>
> What about Novice?

Oops, forgot the Novices. Yeah, they would retain the privileges they
have now. I really don't know how many people this will really affect.
Probably not too many active Novices any more.

Remember they will still have 6 meter operation available to them. But
I still like this because it is an incentive to upgrade. And with no
Element 1, what is the impedance to upgrading?

>> General: General test will scale back on the RF safety, and replace it

I'm still big on the idea of a person having a good reason to upgrade.
This does it, and allows a real entry level opportunity for people, yet
allows a niche for those who are happy to stay there. And there will be

plenty of people that will be happy to stay there.

Without a real reason to upgrade, I can't really support a three class system. I don't think that there are enough different privileges to offer between three classes, unless you make one of the privileges HF access.

And I can't really support power limits as a incentive to upgrade. It's a forced distinction (keeping in mind that all distinctions are arbitrary at some level) that I do not find acceptable.

RF safety and safety around high voltages is of critical importance for amateurs. The RF field calculations are one thing, but to me even more important is the potential for RF burns and B+ shocks.

The Technician is exposed to these dangers at events such as Field day or contesting with other hams - I know I was.

And while a Unlicensed person may be operating the equipment too, they are much more likely to be afraid to touch anything but the PTT switch. The Technician will be more likely to be careless through familiarity.

I cannot in good conscience support a testing regimen that does not test extensively for safety at the base level. And since the newly minted Ham would have the knowledge of High-power levels and high voltage, to limit them to low power would be arbitrary and punitive.

So that is my rationale for a system that has three classes, HF access for two of them, and doesn't penalize or overly promote anyone.

Do you think only American hams have access to this group?

While it is true that there are others not in North America who have
access to this group, remember that the EU amateurs don't have access to
3.933 MHz. The band stops for them at 3.800.

Do you think that most new amateurs are willing to be boxed in like
that? I mean that after one contest with the club and I was determined
to get my General license. I suppose that different people might act
differently, but the privileges of my Technician license were EXACTLY
what made me go for my General license.

Satisfaction is highly overrated! ;^)

> license (Novice written + Tech written + code). I'm glad he did.

Although there isn't a tech plus any more, if I were to teach a class, I would leave no doubt that I expected the students to go on beyond the Technician license, and would probably even have a little time devoted to trying out Morse code to see what would happen. But even for the new licenses, if Morse code goes by the wayside, I'd include a little bit of the General information to try to whet the student's appetites for one of the advanced licenses.

Question for the group:

Is learning more a bad thing or something?

That's correct.

Yes, it would be! I should have mentioned that earlier.

However, very few actually used that waiver, because

- there were not that many hams before May 1917
- there were fewer who had a Class B/General license
- full privs could be had with an Advanced, which was still available
until the end of 1952.

There may be a free upgrade scenario that I would support, but I have
not seen one yet.

It didn't grant much in the way of more privileges, either, and very
few were actually issued.

> During the 1951 restructuring, which restored

IOW it was one guy's idea, and nobody was going to tell The
Commissioner that it wasn't a good one. Particularly since it only
affected a few hams anyway.

Perhaps. Or perhaps they were "noncontroversial" because nobody wanted
The Commisioner mad at them.

>
> The Advanced-class was eventually opened back up to new licensees, so we
> do not know what the longer-term effects would have been.

True - but it was well over a decade before that reopening was even
discussed! And FCC had no problem with keeping those folks on the
records, even with a noncomputerized database.

> I see no
> realistic likelihood that Advanced will be (or even should be) reopened
> in any foreseeable future.

That's what folks said exactly 50 years ago, too.

> The outcome that you propose, which is to
> carry them on the books for at least 35 more years or until they
> constitute less than 1% of all hams, may introduce further problems than
> the previous, and much shorter, 14-year period.

But all that avoids the main question of "what's the problem"? If
those Advanceds are satisfied with their license, why not let them
alone? If
they're not satisfied, is the Extra written test so difficult that
they
need a waiver?

In 4 years the number of Advanced has dropped by about 17,000. If it
keeps dropping in a linear (not asymptotic) fashion, the last one will
be gone
in less than 20 years.

> implications about the regulatory infrastructure that is necessary to
> give them force.

OK, fine.

The difference between an Advanced and an Extra for enforcement
purposes is just 8 little slices on 4 HF ham bands. Is that a real
enforcement burden?
Four of those slices (the lower 25 kHz of CW/data) are the same as for
General, too, so the effective difference is just the 'phone subbands
on 75/40/20/15.

> An Advanced-class license is one more alternative to
> program into the licensing computer,

It's already there!

> one more piece of regulation to be
> understood and enforced by regulators,

Already in place.

> and overall, one more class of
> amateurs to track and incorporate into any regulatory policies and
> agendas. The implementation of all of that is significantly more than a
> few sentences.

No, it isn't. Look at Part 97 and see just how much would come out if
all Advanceds were upgraded to Extra. It's not very much.

Also, note that the free upgrades would *create* work for FCC, by
requiring that the databases and licensing stuff be updated to change
all those licenses.

Will FCC issue a new license to every ham that gets a free upgrade, or
will they
keep their old ones until renewal/upgrade time, which may be 12 years
hence (if someone just renewed, and doesn't renew again until near the
end of the grace period).

> There is a legitimate distinction between "easy" and "straightforward."

In this case they're the same. The VECs do the testing and most of the
paperwork. That's why FCC required existing Tech Pluses from before

March 21, 1987 to do a testless VE session in ordr to get Generals.

> Anyone with engineering experience surely knows that something could be
> conceptually simple, but still complex and time-consuming in its actual
> implementation.

Been there, done that.

> Mass re-testing might be straightforward, but would not
> be easy within FCC and VEC budget/manpower constraints.

We're talking about spreading it out over many years. And there's an upside - some of them will upgrade all the way to Extra while they're at the VE session.

Besides, if things go the way NCVEC wants, they won't have the "burden" of code tests anymore anyway, so what's the problem?
>
> Mass re-testing would be a regulatory burden for the FCC,

Not if it were spread out over time, as outlined above.

>a personal
> burden on VEC's who would have play de-facto judge and jury for large
> numbers of existing peers, friends, fellow club members, etc.,
> concerning whether or not they could retain former privileges (what
> volunteer would want to endure that for very long?),

How would that be any different than now? VECs don't pass judgement on written tests, they simply proctor and grade them in multiple-choice format. Where's the "personal burden" other than the crowd being a little bigger?

Or do you imagine that the VECs would somehow sit in judgement?

> and would go
> against where the FCC is heading, which is towards less regulation and
> fewer grand schemes.

Like BPL?

> I might also argue that mass-retesting is sounding
> very much like a repeat of the scenario played out in the 1960's with
> Incentive Licensing.
>
And that would kill it stone dead.

There's another angle, too:

Mandatory retesting would reveal how many hams were either totally inactive or had lost interest to the point that they'd let the license expire. Would probably cause a massive drop in the number of hams on the database. Not a good thing from a political point of view.

By the same token, if FCC automatically issues new licenses to all
free-upgraded hams, a number of them will come back labeled "not at
this address" or "deceased" or some such. Which could have a similar
effect to the above. And since it's a requirement to keep FCC aware of
address changes....

> There's a lot of debate in this newsgroup about the Incentive Licensing
> scheme of the 1960's, who initiated it, what was intended, who supported
> it, why it failed, who was to blame, etc., but one thing that most can
> agree on is that it's very easy to start out with good intentions, and
> what comes out the exit door of regulatory agencies might be
> unrecognizable as something that would give the desired result.

Agreed! The original 1963 ARRL IL proposal bore little resemblance to
what finally came out the door.

And in 1999, the R&O bore little resemblance to the NPRM. Example: The
NPRM called for Advanced to stay.

> Hence
> the expression, "The road to hell is paved with good intentions." Mass
> re-testing could also be viewed as well-intentioned, but ultimately a
> road to hell.
>
That argues for leaving everything just as it is now. OK, fine,
we'll just do that.

> So, it's a good thing that neither of us are arguing in favor of testing
> to avoid losing privileges, right?

Depends on whether privs are actually "lost".

> >>and such existing hams are a large, stable user base such as

Not just the phone bands!

> *AND*
>
> - There may not be very many of them, active at least, so any upgrade

> would not give much benefit, anyway.

Covers all bases, doesn't it?

> You also argue that Novice should be left alone because there aren't
> very many of them, but then advocate restructuring that you believe
> would bring back its "heyday" with many more licensees in that class,
> which of course, should then be left alone.

The idea is that the Novice would be *changed*, not simply reopened.
>
> Which is it? Too many, or too few, to justify elimination?

The idea is to cover all bases. Does anybody really know why so few
Advanceds have upgraded?

> If neither
> is a sufficient criteria to argue for or against elimination of a
> license class, then that's a non-falsifiable argument.

The idea is to do what will give the best results for the ARS with the
minimum amount of negative effects.
>
> >IOW, we allow them to continue doing what they're doing because they've shown

I'm referring to *systems*.

> There is a subtle distinction. A group
> of people may not want to change, but license classes may need to. A
> set of license classes is a ladder, to be climbed as far as the licensee
> wishes to develop his skills.

Some reject that idea, and say that there should be just one license
class. How do we answer them?

> It is also a taxonomy, with a specific
> regulatory purpose. That purpose is to ensure that limited frequency
> spectrum is being put to the best and highest use via the distribution
> of privileges over that spectrum. Implicit in this is structuring the
> license class system to ensure that all amateur radio spectrum (HF, VHF,
> UHF, Microwave) is not only used, but used well, in ways that fulfill
> the Basis and Purpose (FCC Part 97.1).

But how can any license structure actually do that? Or, to take a
different
approach, why not have just one class (as some have argued here) with
all amateur privileges?
>
> Since technologies, modes, and frequency usage patterns change over

> time, the taxonomy should change as well, hence the need for periodic
> restructuring over amateur radio's 100-year lifetime (Though I would

> restructuring until the no-code issue came to a head in the 1980's,
> would have avoided the backlash that resulted in Incentive Licensing of
> 1968).

I agree! So *why* was the "Great Giveaway" of December 1952 done, particularly since FCC had just spent several years going in the opposite direction? Why was the restructure of 1951 turned on its head just as it was going into full effect?

Was it:

- Sudden personnel changes at FCC?
- Desire to push the use of SSB by hams?
- Desire to get hams off of 10-11 meters (the only HF bands open to General and Conditional 'phone) to alleviate TVI?
- Desire to get more hams using HF mobile (which was only opened to hams after WW2)?
- Combination of the above?

I have yet to find a definitive answer to why the "Great Giveaway" was done, either in the written histories or in the recollections of hams from that time. The answer could be as simple as "The Commissioner changed his mind".

Out of time right now. Will answer the rest in Part Two

Yes, I do. Where? When? Now? 14070? 21070? From State College/PA to
Reston/VA how far is this? do we have some shortskip up there, would it be
better to go to 40 or 80?
You tel me, and I will see, if the TRX is available over there at W4MQs
location.

Dear Dave,

in plain language this means:

This QRG is only available for REGION 2 hams. But you never will get som QRM
due to time and location of the transmitter.

Sorry for encoding my first post.
Your translations where not bad either.

Nope, that would be Bob/K9EID. Dave Heil has a tarpaper shack in West
Virginia, and QSL cards from out-of-band Frenchmen.

Do you have any portion of 6M not authorized to you?

Now getting the government off our backs is a bad thing?

You're just full of suprises and contradictions, TAFKA Rev. Jim.

BPL is not allowed to interfere with your amateur communications.
Would you have it any other way?

Sorry, Dee, but our resident Extra expert, TAFKA Rev. Jim, says that a
code exam is a disincentive to CW use on HF.

I just wonder what took him so long to recognize that fact as the
disincentive has been in place since 1912, and he has vehemently
disagreed with his new found philosophy for the past decade.

For amateur radio in the US of A?

All that is needed is hard work, discipline, and constant practice at
morse code. That is all that is needed.

Such will demonstrate to the amateur community your sincerety,
commitment and dedication to olde-tyme hamme tradition.

That, and total personal Belief that the ARRL is god of all radio,
knows all, etc., and never does wrong (even when it does).

We now return you to the noise level of Total Unquestioning Belief
in the amateur radio standards and practices of the 1920s.

>Newcomers with any gumption can have some HF if they choose to pass the
>code.

Hoops. Jump through the hoops like good little doggies. Arf, arf.

As a newcomer to HF 51 years ago, I got on HF without needing one bit of morse code knowledge, skill, or anything else.

HF propagation hasn't changed since then. Solar cycles are still cycling.

The only difference is that hams have solid-state toys now instead of glass, metal, and vacuum active devices. Some still insist on ON-OFF keying of their carriers, even with sophisticated radios that can do much more.

>Tech study guide and test does include some very basic questions on
>HF propagation, procedures, rules, etc. Unfortunately too many instructors
>ignore the HF side of things and don't bother to give much encouragement to
>go after the code so then the students end up on VHF/UHF only.

52 years ago I had good instructors at Fort Monmouth. Spent seven months there before being assigned to the 71st Sig Svc Bn in Tokyo. Only time us students had a code key was a one-afternoon hands-on class that had two-tube MOPA HF transmitters...to learn how basic HF technology was...and, in ham radio, still exists over a half century later. The code key was needed solely for "turning on transmitter's emission."

None of the students had to use any morse code for any purpose later. In Tokyo, army station ADA had 42 transmitters ranging in RF power output from 1 to 40 KW. Absolutely no on-off keying CW used then, wasn't used in 1978 when the HF facility was disbanded and returned to the Japanese.

>My
>instructor, many moons ago, really emphasized going for the "complete" Tech
>license (Novice written + Tech written + code). I'm glad he did.

Wow, yeah, full hoop set. Good for you.

Now, if someone invents a time machine, you can hop back to 1953 and serve your country doing "radio" just like they did back then. Except the VHF, UHF, and microwave stuff, of course.

Tek makes lots of DSOs now. They can do so without straining.

Do you need a Tucker Electronics catalog? Tucker used to sell
ham equipment until business in that line got way too unprofitable
(apparently all Texas hams get Southgate Type 7s or Elecraft or
something).

Morse code can do anything. Slowly, to be sure. Morse code gets
through when everything else will.

Sigh...STORAGE SCREEN oscilloscopes can hold a display for
as long as AC power is on. Most DSOs (Digital Storage
Oscilloscopes) can do the same thing, just refreshing the screen
constantly with the same sampling.

Tektronix had screen-memory models and now has DSOs, along
with John Fluke, LeCroy, and other companies. I thought you were
employed in electronics, TAFKA Rev. Jim?

I used a Memoscope (serial #14) in 1957, 47 years ago, for
accelerometer pickup waveform recording in environmental testing.
Not a biggie except to a crowd that knows only P4 phosphors.

>I hope it doesn't come to that.

It already has. Many are already mentally dead and refuse to budge,
compromise or anything else on morse code testing. They keep
misspelling 'compromise' as "captitulation" to their opinions.

>Instead, they should cleanse their souls by explaining why they argued
>for maintaining the Morse Code Exam for HF access, and now how its a
>disincentive to CW use on HF. It just doesn't make sense to me.

They should go to confession and be rewarded with having to do 100
Hail Hirams as penance. Their afterlife will be better for them.

Or, they could repent and nail some theses to a church door. That
worked for Marty Luther a long time back.

I get the impression that some of these cold, dead finger souls equate
morse code testing with Latin and the need to use only Latin in talking
to God (who, in their beliefs, apparently loves morse). Marty didn't
think so and spoke regularly with the Big Boss Above, started a whole
reformation in Protestantism. Millions followed him over the centuries.

We now return all to the noise floor of independent thought, a no-no
to certain newsgroupies in here. :-)

No, an overall data/information "floor" to show that "facts" are not solely those of the selective-editing of facts (removal of information that is not in favor of the ARRL) from their "documentation."

The "noise floor" as you put it has already been raised to astronomical heights by the arrogant, uncompromising PCTAs who stoutly insist on the old ways such as the absolute necessity of testing for morse code in this new millennium of technological progress.

Independent thought is the bane of the fraternalists, the lifestylers, those who inhabit an imaginary world of their entire reason for being centered around the mighty morse machismo of seven decades ago.

If you have some kind of problem with "noise," then I would suggest you have this newsgroup CLOSED, moderated to let only the established thought rule the content. See Paul Schleck about having the newsgroup closed and inaccessible to anyone but those with the correct papers, checked at the door.

>We are not saying that the ARRL was the only thing that made this happen.

Yes you are. The evidence is the constant evangelical beliefs in the ARRL doing it all for hams in the USA.

>Simply that they were a significant player in the US and that the US was a >significant player in the world.

ARRL was a relative late-comer in national amateur radio organizations in the USA. They were incorporated in 1914. The very first, and still existing radio club in the USA is the Radio Club of America, organized in 1909.

>Without the ARRL, US amateurs would have had a much tougher time.

You are proposing a "what if" situation in an alternate universe. You have absolutely no verification of what you said above. It is your personal opinion and nothing more.

>If the US amateur community had been seriously >weakened, it would have affect to some degree the amateur community in the >rest of the world.

Probably so but do not elevate the ARRL to some kind of divine order of things. Remember that other organizations were already around before the ARRL and were remarking to the U.S. federal government concerning amateur radio. Many, many more citizens of the USA were involved in this new "radio" between 1909 and 1914 and that ALL, amateurs included, had very little technological knowledge or operational experience with "radio." You cannot believably "predict" these alternate universe conditions of then anymore than you can "predict" or even "know what will happen" due to regulation changes.

The code test requirements very much affect the "non-hams." Those
that do not care for any morse code test or those that cannot do any
sufficient morse would be affected in that they would not bother
trying to get a license grant.

Radio amateurs who have already achieved the top "upgrade" license
class in their country would NOT be affected in their privileges. Their
only "affect" is a psychological disturbance due to newcomers not
having to do exactly as they did many years ago.

I don't know that much about Industry Canada's charter in Canadian
law but the FCC is NOT required to provide psychological sustenance
to already-licensed radio amateurs.

At present, the majority expressed opinions of radio amateurs both
in here and elsewhere treat the hobby activity of amateur radio as a
glorified fraternal order insofar as requirements in law are concerned.
The FCC is not chartered as a fraternal order, is merely a radio
regulating agency.

Amateur radio is not a vital need or concern for any nation's security
or safety or well-being, regardless of the emotional spins turning
around from existing amateur fraternal orders. It is a fun hobby,
a relaxing (to most) avocation involving radio activity. Some poor
souls cannot be satisfied with anything but a fantasy mindset of ham
radio as an entire raison d'etre, a reason for existance. Those
mentalities will never be satisfied, cannot compromise in anything
unless all test for and be granted licenses exactly as they had to
endure once upon a time. They are outraged, fed up, cannot take it
anymore the minute anyone puts forth a change in regulations they
do not like.

If ALL the commentary on new regulations come only from already-
licensed amateurs, then this is NOT adhering to good democratic
principles of federal rule. It is merely going by very long established
tradition of the insular fraternal order ruling only itself by itself. That

is
fine for fraternal orders...except no amateur radio service in any
country that I'm familiar with requires their governments to regulate
amateur radio as or by fraternal order principles.

When I was operating from Europe or Africa, I never operated above 3.800
MHz. I am now in the U.S. where I may operate on 3.933. I frequently
choose not to do so.

You seem to have a problem passing exams required of others. No matter
and certainly no loss.

> As a newcomer to HF 51 years ago, I got on HF without needing one bit
> of morse code knowledge, skill, or anything else.

When and if you pass an amateur exam, you can be a newcomer to amateur
radio. Right now, if it is HF you want, you'll still have to climb that
5 wpm mountain.

> HF propagation hasn't changed since then. Solar cycles are still cycling.

That's right. I've enjoyed those cycles immensely.

> The only difference is that hams have solid-state toys now instead of

> more.

My solid state toy drives a pair of vacuum active devices. I'll use
whichever mode I desire as a radio amateur. You may do as you can.

I generally choose "on-off" keying rather than the more abrupt "ON-OFF".

You don't make regulations. You've commented to the FCC. Did you consider you comments as DEMANDS? You've commented here. Do you consider your comments as DEMANDS? Did the FCC reject your views? They certainly haven't been met with wild cheers here.

> Especially those about love, honor, and obeying morse code tradition.

I wish the several of you inhabiting the body of Leonard Anderson would
come to a concensus on whether I am a god, the god or not a god of
radio.
There seems to be enormous disagreement among you. In a recent post, I
believe you refer to the ARRL as the god of radio.

> As a "key member" of the
> foreign service diplomatic community, he still thinks that Denmark is
> some kind of province of Germany.

It is "Foreign Service" and "Key Officer", Len. I don't believe that
Denmark is now a province of Germany. The last time Denmark was a
domino which fell, the German army marched right in.

> All kinds of smarts in the U.S.
> government these days.

There've always been "smarts" within the USG. I haven't been employed
by the USG for over three years. Do you ever get anything right?

> He doesn't know beloved fairy tales of Hans Christian Andersen, only
> the fairy tales of the ARRL (beloved by mighty macho morsemen).

I'm actually entertained by the tales of Len NoCode Anderson, never a
radio amateur, but he knew a few.

Good point. I was thinking more of the impact of removing code (per
the WRC-03 decision) not having a (negative) impact. You are correct,
there would be an impact on non-hams should IC choose to retain code,
even though no longer required...I missed that possibility!

>

True as well. Those who achieved their license under a more rigorous
testing scheme will naturally see any reduction in testing
requirements as an erosion of standards, and will be offended by it.
That is simple human nature. Most affected by this are the folks at
the top level of licensing. Which makes sense - they put in the
greatest effort under the old system.

>

Exactly the same in this regard. They regulate, not placate....

Yup - there is clearly a notion that everyone who is not subjected to
the same rigorous testing as they were years ago is somehow getting a
free ride. What isn't being adequately taken in to account are the
underlying reasons for simplification, elimination or change of the
various test elements.

>
> If ALL the commentary on new regulations come only from already-

> amateur radio as or by fraternal order principles.

I believe that IC was simply giving the amateur community first chance
to voice their opinion - not from the perspective of a closed shop per
se, but because they wanted to hear the opinions of those currently
involved in the hobby before they decided what to do next. I'm no
expert in the inner workings of the government here, but I believe
that NPRM is the next step, and public comment is requested at that
stage.

Remember, with no incentive licensing scheme here, the perception of a
'class structure' of a hierarchical nature is not nearly as prevalent.
Most of the folks I have talked to welcome the elimination of code
testing - after all, it isn;t code that is being eliminated, just the
mandatory practical test - which only survived as far as 2003 because
of the ITU requirements. In the poll submitted from the amateur
community to IC, almost two thirds of the lecensed amateurs here want
code testing dropped from our requirements! Approximately the opposite
of the ARRL numbers bandied about here....

BTW, a question - does the FCC operate based entirely upon democratic
principles? From what I'm hearing on the group, specifically WRT
incentive licensing several years ago, they seemed to ignore the will

of the majority and come up with something on their own.....which seems to have annoyed everyone. Oh well, at least they got everyone to agree on something!

Just as an aside to you, Len: I find you arrogant and uncompromising.
No one here can possibly know as much or have done as much as you. You
leave no room for compromise on the issue of morse testing, having only
its abolition as your desired end result.

> Independent thought is the bane of the fraternalists, the lifestylers,
> those who inhabit an imaginary world of their entire reason for being

Talk about your imaginary worlds! Aren't you the guy who has appointed
himself an advocate for removal of morse testing in the amateur radio
service in which you are not a participant. Give my best to the rest of
the Mitty clan, Walter.

What's it to you, Len? You aren't involved.

>> a bit more?
>
>At one time, if you were going to be a Ham, you were almost certain to
>be using Morse CW as a major part of your Operating activities.

That was a long long time ago, Mike.

You can go back to the late 1940s or further and read histories of hams who got
their
Class B or C tickets and promptly went on 'phone from the getgo. Some were on
VHF/UHF,
some on 10-11 meters. Many quickly went for their Class A so they could do 75
and 20
'phone as well. (There was a one-year wait for Class A, but it required the
same 13 wpm code test).

There used to be a requirement that a ham actually operate Morse for a certain
amount of time in the months before renewing, but that was changed to simply
"operating" (any mode) about 1948 and eventually dropped altogether. And
"operating" could theoretically consist of just calling CQ...

>There
>was a time when the two major alternatives were AM or CW.

Yep - but except as noted above, there was no requirement to use either. And while CW equipment gets the most out of the simplest, AM can be pretty simple too. For example, back in the old 5 and 2-1/2 meter days, 3 tube "transceivers" were popular with hams. These consisted of a 3 tube rig: one tube functioned as a superregenerative detector on receive, and a modulated oscillator on transmit. The other 2 tubes were a 2 stage aduio amplifier, used as the audio chain on receive and the modulator on transmit. With a dynamotor or vibrapack, could be used mobile, and with a decent antenna, one could work all over a metro area and then some.

AM on HF cost more than an equivalent CW rig, of course, but with warsurplus parts and low power the difference wasn't prohibitive for many hams, particularly if they were satisfied with low power.
